I stumbled upon this web sight with great photos of vehicle accidents from around the world. I think I will be driving a bit slower now.

Before everyone starts saying the links you sent don't work.....
http://www.wreckedexotics.com/

will work (the above you sent somehow had an embedded space which most
browsers won't like. :))

Topic: 37467 Message: 37467

From my experiences its as Harry put it, It could be for many reasons. I would not take it personally and move on. Just curious what was it for? Fire? PD? Dispatch? EMT? The more testing you do the better you get. and I as far as suing goes I would steer clear of that. That seems like a lot to tackle. and most definately not worth it. You think you have a hard time getting in now? See what happens if you were to sue an agency or dept. It would definately put a real damper on things I am bettin..

Another thing, don't OVERREACT. Especially in an oral exam. Testers will throw stuff at you which has NOTHING to do with the job your are trying to get just to get your reaction. Weren't you trying for dispatcher? You would get ALL kinds of people to deal with and you can't take what they say personally.

If it has to do with financial records, they may feel people who can't handle their personal finances may not be the "best" person for the job. I say that having NO idea what your situation is.

Gary.

Most of our deputies still think that because our channel 2 (155.7) is
digital that no one else can hear what we say. Even a couple of Sgts
didn't realize the availability of scanners with P25 capabilities.

As far as any agency taking a "dim view" of streaming it, who really cares?
Not to sound too brash, but if they want NOT to be heard they should all
encrypt their traffic.

Just my $.02.

Also, being "discouraged", upset, angry, "not understanding why"
something happens... those emotions/feelings are very much part-and-
parcel of public safety dispatching, and more often than not you'll
just have to accept them and keep moving, in both the immediate time
that an incident is occurring, and also in the long-run about
department policies, procedures, etc. Many things happen that you
simply can't "fix" or that you'll never know the reason for.

Also, though it's unsolicited and likely something you already know,
on applications, during interviews, and especially in preparing your
BGI with info, be absolutely positively CERTAIN that you include
EVERYTHING from your past that could, might, maybe, possibly, even
remotely come up as a "negative": An unpaid movie-rental at
Blockbuster, a pissed-off girlfriend/boyfriend from 10 years ago, an
old buddy that's now in the slammer, an argument with a former
boss/co-worker, the next-door neighbor whose tree you attacked when
it hung into your yard... EVERYTHING. It may seem insignificant and
even silly both to you AND to the investigator (which is what you
probably want), but woe to the applicant who forgets something even
moderately negative and the BGI finds it. It can, even if totally
incorrectly, give the impression of less-that-total honesty/openness
on the applicant's part... and THAT is what could get you the axe
even when the incident itself is all-but-meaningless.

Dispatchers, often more than POs themselves, have instant access to
incredibly huge databases of incredibly personal, private and
confidential information about *everyone*. The slightest hint of
less-than-total honesty can be an instant disqualifier, even for the
applicant who's otherwise the leader of the pack.

And the above isn't directed an anyone in particular, especially you
Ben, but to anybody considering a career in public safety.

37474. Novato Fire... Drill?

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-02-24 19:31:35 UTC
From: inigo4688
Topic: 37474 Message: 37474

It sounds like they're reconing some smoke coming from the center of an old abandoned hospital complex. They've been really cautious so far (deciding whether they want to cut the locks, etc.) and Division A and Division B are now slowly making their way into the center of the building. Truck 6151's company is on the roof. One of the guy's in the building definitely has his mask on, and I can hear a loud audible alarm in the background, so I'm thinking this might be real. Really interesting listening even if it's not. Division A might have just found the fire.

28880 - Novato Fire Tac D4

28816 - Novato Fire CTRL D2

I'm thinking this isn't a drill. Hill IC just called for a second alarm and I heard his conversation with the safety officer patched onto the MAIN COUNTYWIDE dispatch TG. By the way, this conversation was on Novato Fire Command D5, a NEW MERA TALKGROUP.

-Inigo

P.S. If this is a drill I'm gonna feel really stupid lol

Interesting stuff. P25 certainly limits the number of listeners.

I meant my comment in relation to Ben's problem, since he streams police
radio.

Don't know about that percentage, I'm probably not that cynical about
people. OTOH, I wouldn't want my local PD to be hiring dispatchers
(or cops) whom they feel are just "fairly honest most of the time."

Sunnyvale Med 7 advises he hears County dispatching 2 AMR rigs.

At Lockenbar at the east side.

FD now on scene and there are 3 rigs on scene. Cancelling the truck and rescue. Sounds like there may be santa clara FD on scene.

Ok, confusing.. Santa Clara told Sunnyvale to cancel the truck and rescue. About a minute later, Santa Clara wants the truck and rescue to continue.

Confused? Me too. Sounds like it may be a hit and run too.

And we have confirmed extrication required on one vehicle.

No more updates unless warranted.

Its Lockinvar .....just up the street from Homestead

Sunnyvale has Engine 4 Squad 4 Truck 2 Rescue 2 Battalion 1

Santa Clara Engine 7 and 3 Medic 5 (guessing on these)

Sometimes you have to be able to read " between the
lines" . some can do this / some can't

Without hearing S.Clara Fire units calls, I assume they
wanted THEIR Jaws via THEIR Truck 2 and Rescue 2 . However ,
Sunnyvales units were already enroute and Closer , as soon as they
became aware of it , they went ahead and had Sunnyvale continue their
Truck and Rescue 2. Intially they had these dispatched and that is
why ,at first , they cancelled Sunnyvales. Not really confusing, if
you think about it for a minute or two

Sunnyvale Fire 482.7125
Santa Clara , probably on Fire 2 TG 304

Sunnyvale Police 482.9625
Santa Clara PD TG16
CHP (this should be theirs) 42.50
Ed

2111 hours IC just extracation complete.

Good morning, Ed!

Busy morning in S'vale. Should have mounted up to shoot this one, but I am in the middle of lesson planning and just couldn't pull myself away from all of the fun. By the way, a question, what is the exact purpose of broadcasting elapsed time on the incident? Is this simply a reminder for rehab rotation?

Thanks!

Rehab rotation, SCBA time on masks, and for exterior operations, numerous things - the time of how long a roof may last if they have crews on the roof ventilating.

It can also give them a reality check of "Wow, we've been here 30 minutes? I need a second alarm."

Yeah, lets the IC know just how long his crews have been working , you might have caught him relieve the two guys with the 1-3/4 inch line in front of the garage. once things are under control , you notice they cancell the " timer"

Naw sorry Evan . you KNOW how much time you have on an SCBA because 1) you have a gauge telling you how much air you have and 2) you have an alarm that goes off when you have only 5 minutes left..... I ideal situation is for fire fighters to get out of the building BEFORE the alarm goes off. At least when I trained with Scott SCBAs they were set for 5 minutes AND with 2 minutes left the alarm shuts off.....now its REALLY time to get the heck out.

It has little to do with addtional alarms either.

In a sense, it does have to do with SCBA. A lot of times, the guys in a fire don't realize how quickly time goes by, so knowing they've been in and hearing "10 minutes elapsed", the IC can then call them out if need be.

I know numerous times dispatch has said "30 minutes elapsed" and the IC stated "You can discontinue the time check, I don't have anyone on air anymore."

> It has little to do with addtional alarms either.

Well, I meant as in "Wow, we've been here 30 minutes? I'm not making any headway on this fire. I need a second alarm."

When Fort Worth got trunking, back in the 1990's, some cops thought pressing "private" meant no one could overhear what htey said. My BC200, however; did a FINE job of hearing them say things they'd never want the public -- or their sergeants to hear. Heh!

EVAN! no, IT DOESN'T, the IC does NOT know when a fire fighter turns his SCBA ON, if he enters the building, say from the C side, the IC cannot see him, so how does 10 minutes mean ANYTHING. It again doesn't have to do with alarm level. The time doesn't have to do with anything EXCEPT possibly an alarm for relief purposes which doesn't happen than often. Take it from experience my years with the SFFD Reserve were BUSY years and I don't care about those who may have taken some fire class in some college, there is nothing like actual experience. In my first year, I rolled on Six - 4 alarm fires and FORTY-EIGHT 3 alarm fires. that doesn't include drilling every Thursday night with SFFD instructors.

I hate to get on your case, and your not the only one, but there are too many on this list with little or NO experience answering these questions.

Well, everyone has an opinion and is entitled to one. And I've heard from numerous people that it gives them at least a reminder. Whether it's 'official' or 'documented' somewhere, that may not be the case, but I know for a fact that it is used as a reminder for time on SCBA by a number of people in the fire service.

>with anything EXCEPT possibly an alarm for relief purposes which doesn't
>happen than often.

Once again, please re-read what I said. You are telling me essentially what I just said:

Well, I meant as in "Wow, we've been here 30 minutes? I'm not making any headway on this fire. I need a second alarm."

Which would mean they need more apparatus or relief. If a IC is reminded how much time they've been on a fire, he would know he needs an additional alarm, relief, or needs to change something if he isn't making any headway on a fire.

Maybe, once again, it would help to quote who you are talking to / what you are talking about. I've given you the instructions on how to do it as you asked, but you have done it maybe twice since then. There've been numerous times you've misquoted people, or put the wrong words in peoples mouths, or even said the wrong person said something.

>Take it from experience my years with the SFFD Reserve were BUSY years and
>I don't care about those who may have taken some fire class in some

> I hate to get on your case, and your not the only one, but there are too
>many on this list with little or NO experience answering these questions.

As usual, Ed's right, everyone else is wrong.

BTW: I am currently taking fire training classes for a volunteer fire department. But I don't claim to know everything, nor do I claim I am always right and everyone else is always wrong.

Ed, glad you responded to Nina regarding books of interest. My wife is a writer, and I think Caroline's experience will serve as a good reference for what is possible.

And for bonus points, she's Alexandria Paul's sister (I think sister?).

Another good book is Trauma Junkie: Memoirs of an Emergency Flight Nurse by Janice Hudson. Written by a former CALSTAR flight nurse. Good stories and pictures.

Sounds like they are running a drill on the MERA system on talk group 26480 which I have listed as a fire TAC channel 4 but I could be wrong.
I can tell its a drill since they are so calm on the radio.

Who was it, Van Halen or someone who's taking paramedic classes in New York? Could you imagine a ambulance pulls up, and Van Halen jumps out?

Evan the point is , as usual you show NO respect for those who have been there. I know your approximate age and I am TWICE that. these are NOT my opinions they are from experiance. Show more respect

You'll NEVER get as much experiance as I have simply because the fire service doesn't have the fire load it did in earlier years. Equipment is better, faster and especially building and fire codes are more strict. Sprinklers are in lot more buildings as are smoke detectors.

I wouldn't even want to guess how long it would take a member of any fire dept , Reserve or not .. to roll on as many greater alarms (54) as I did between Sept 1970 and Sept 1971. Probably at least 5 - 6 years.

there is nothing you can do about it , just consider those before you have the experiance and you don't.

At 04:13 PM 2/25/2005, you wrote:
>Evan the point is , as usual you show NO respect for those who have been
>there.

The point is, as usual, there is one way - Ed's way, and no other way.

I have talked to MANY people in the fire service who have told me the minute counter from dispatch, among other things, helps them manage time on SCBA. Either for themselves when inside, or outside, as an IC for accountability.

This has nothing to do with RESPECT, but your attitude. You have to take the stance of "WRONG, NO - YOU ARE INCORRECT". This point is a matter of OPINION. Granted, it may not be written in any service book, operating procedure, handbook, guideline, etc - that the timer from dispatch CAN or SHOULD be used for SCBA management, but it IS. And I say it IS because I've talked to more than one person who has. So AGAIN, it may not be official, it may not be documented, it may not be policy, but it IS used, somewhere, by more than one person. I have, also, again, heard a number of agencies when given say a "30 minutes elapsed" from dispatch say "You can disregard the time count, I don't have anyone inside on air" which to me indicates the main reason to them for the count was for people on SCBA's. Again, yes, it's used for other things, but this to me indicated it at least helped with SCBA time management.

Respect: I respect everyone's right to an opinion, which is something you obviously don't. I make a statement that I know of a number of firefighters who use the timers for SCBA management, and you go and say "NO! WRONG!"?? If you expect others to respect you, respect them also. The time management for SCBA comes from people who have been there.

>I know your approximate age and I am TWICE that. these are NOT my opinions
>they are from experiance. Show more respect

Ed: I am 28. Respect is something you earn, not just get due to age. It's not just "Congratulations, on your 40th birthday, you get respect from everyone under the age of 25." And when I state what I have been told by a number of people, and you say "WRONG!" you get one more step away from earning my respect.

> You'll NEVER get as much experiance as I have simply because the fire
>service doesn't have the fire load it did in earlier years.

That's a pretty long shot comment. Granted, I'm not going to (at least in my current mindset) become a full time paid firefighter, but I could go to say New York's busiest fire company and get the same amount of experience you have. Not around here, you're right. Not as much fire load. And, as I'm

almost 30, and the fire service isn't a job you see many 50 year olds on the front lines, you're probably right. If I were 18, and went out to FDNY or Chicago fire, yes, I'd be able to get as much experience as you.

>Equipment is better, faster and especially building and fire codes are
>more strict. Sprinklers are in lot more buildings as are smoke detectors.

And hopefully it will save lives, and I hate to say, put a lot of firefighters out of a job, or at least give them a lighter work load. There's still old buildings everywhere which don't meet todays code, but meet the code for when they were built that are disasters waiting to happen.

> I wouldn't even want to guess how long it would take a member of any
>fire dept , Reserve or not .. to roll on as many greater alarms (54) as I
>did
>between Sept 1970 and Sept 1971. Probably at least 5 - 6 years.

FDNY or Chicago, maybe. Out here? Probably not.

>there is nothing you can do about it , just consider those before you have
>the experiance and you don't.

Ed: You have a lot of good experience to share, however your attitude and ego often show WAYYY too much.

Everyone is entitled to an opinion, everyone is entitled to have a say in something, and just because others do something that's not standard or not written, doesn't make it WRONG.

AFAIK, there's no policy or guideline that says you CANNOT use the elapsed time from dispatch for SCBA management. No one (I hope!) would ever RELY on it, but it can help. As just today at this fire, dispatch came back and said something to the effect of "Sorry, I'm a few minutes late, for your 30 minutes elapsed." The IC then advised dispatch they could terminate the time count.

Evan

Evan , think about the timer issue.....fire fighters arrive at DIFFERENT times at a fire , mostly within a few minutes . But what about greater alarms.....a delay, 5 minutes , 10 maybe even more

the other thing is the timer is given over ONE frequency , while it would have worked in Sunnyvale since they are all on the same freq, it won't work in others like San Mateo County or SFFD and others .

The best way to judge ones' time inside a fire is working with your " buddy" and the devices the SCBA has built in.

Just because some friend you know in the fire service says its so is NOT the best answer.

You should read the reports from the SFFD guys in the Oakland Firestorm. an Engine company was Paired with others like a Castro Valley Engine and a Hayward Battalion Chief..... The Chief asked the SFFD Engine to go into a cul-de-sac and open up their Multi-versal (like a stang gun) on the 6-7 fully involved houses. the Lt. asked his if there was a hydrant down there to which the BC said " I don't Know" The Lieutenant REFUSED and who can blame him. There were other examples but I am only going to use the one.

this is an example where a Battalion Chief had much less experiance than a Lieutenant simply because the Lt was from a big city and worked many more fires. My point being , you can read all the manuals you want , but in real life experiance , there is nothing like actually DOING it.

this is Why the big city guys have much more on the ball than the little city guys. Not that it makes the little city guys BAD ,its just the way life is.

My guess is a repeated system of some sort - to be able to talk over any
distance.

Just what I'm sure every cop wants - some guy walking around filming the
police. It's not bad enough for an officer to have to watch 2, sometimes 3
or 4 people in a car on a traffic stop, they now have to watch out for some
guy sitting away from them with a video camera.

I believe if these people are going to do this, they should be required to
have an ID of some sort.
Unfortunately, I know this will never happen, but make an example out of
them. If they're close enough, tell them they need to get much further
back. If they refuse, finish up the traffic stop, then charge the Do Gooder
with interfering with a police officer or disobeying the order of a police
officer.

Again, this will never happen, but I think that would put an end to CopWatch.

The last thing a police officer needs to deal with is a guy with a video
camera standing 20 feet away from them while on a traffic stop and wonder
"Is this guy carrying a gun?"

well Evan LOL , I actually agree with you on this subject

How many times did EVERYONE see the Rodney King beating tape ??
they played the thing to death , yet ONLY CNN showed the WHOLE tape which clearly shows King taking a swing at one of the offices. the others CUT that out. Not that I agree with what LAPD did that night , but if your going to cover an incident SHOW THE WHOLE TAPE

Problem with these clowns is by the time they arrive they TOO won't see the perps fighting with the cops etc , only the aftermath . If they TRULY want to see both sides, they should do RIDE ALONGS and see the criminal element its worst and THEN decide who is right and what is and is NOT police brutality.

Most probably saw them carrrying signs for SJPD to stop killing women after the Vietnamese woman was killed. I have NO idea of how many women have been killed by SJPD officers overall , but I BET its no more than 3 or 4 .

Agreed. And I understand this. You are preaching to the choir. I never said it's perfect, I never said it's used all the time nor used 100% at any fire, but it CAN be used to assist - if you know you went in shortly after "10 minutes elapsed", when you hear "20 minutes elapsed", it's time to start heading out. No one that I know of would ever rely on it, but it's a gentle reminder.

> the other thing is the timer is given over ONE frequency , while it
>would have worked in Sunnyvale since they are all on the same freq, it
>won't work
>in others like San Mateo County or SFFD and others .

Well, it's generally used on the command frequency, so if the IC is monitoring that frequency (which he should be!) it might help him.

> The best way to judge ones' time inside a fire is working with your "
>buddy" and the devices the SCBA has built in.

Agreed.

my point about the Oakland Hills example is this. I relay more on those who have lots of experiance than someone from a dept (in this case Hayward) who do not.

While the smaller depts slowly are getting better , the big depts have the experiance. What if the HFD BC gave that order to another Hayward Engine and NOT an experianced SFFD Lt. ? could have been a fatal mistake , as if the Oakland Fire didn't have enough tragedy without a dumb order like that.

The more experianced one is , the better they are at ANY job , not just fire fighting. The differance is in fire fighting , you screw up and someone dies (line from BACKDRAFT) but its true.

Think about Dennis Smith in " Report from Engine Co . 82" His company in ONE year rolled on 9,111 calls ....incredible numbers , but you can bet those guys KNEW there stuff.

Agreed. And I understand this. You are preaching to the choir. I never said it's perfect, I never said it's used all the time nor used 100% at any fire, but it CAN be used to assist - if you know you went in shortly after "10 minutes elapsed", when you hear "20 minutes elapsed", it's time to start heading out. No one that I know of would ever rely on it, but it's a gentle reminder.

> ONLY CNN showed the WHOLE tape which clearly shows
> King taking a swing at one of the officers.

I don't know, I'm not sure I read the part where it's not okay for police officers to abuse citizens UNLESS the citizen "takes a swing" at an officer. I think that if you can't enforce laws without breaking a few yourself, you don't deserve to wear a badge and a gun. The whole point of LE is to be ABOVE the criminal; one swing and it's okay to go native?

"He hit me first!"

Bleah, save it for kindergarden.

Not to talk specifically about Rodney King, but I'm absolutely okay with even a single frame of film -- completely "out of context" -- where an officer is behaving illegally being used against that officer.

> Not that I agree with what LAPD did that night, but if you're going
> to cover an incident SHOW THE WHOLE TAPE

Maybe you're talking about something else -- journalism? I thought the goal of the project was to capture on tape and be a witness to illegal behavior.

I have the same feeling about encryption: if you can't say your normal everyday work-related stuff in the clear, you're probably in the wrong line of work. Certainly there are exceptions, and I'm okay with limited, serious cases of needing to keep some information confidential (which we've talked about before: tactical teams, undercover work, etc.). But wholesale encryption of LE activities can only mean a decline in liberty for all of us who they purport to Protect & Serve.

I like the old call boxes: if you need to make it confidential, you have to go out of your way to do it. That keeps the routine stuff in the clear. I guess cellphones are the modern way to do this, but I wish they'd outlaw the use of them in routine police work.

Hi Even,

Please take a bit of advise from another old timer, who was not in the fire service, but did serve and protect.

When ever you talk to an old timer, there will never be a time that you will be as good as they were, and they can tell better "War Stories", and your just to young and inexperienced to know anything.

Oh, and by the way. You will never be able to win a fight with Ed, lord knows I've tried.

And when it comes to respect, give it out to those who give it to you, something that others (Ed) should have figured out by now.

At 04:13 PM 2/25/2005, you wrote:
>Evan the point is , as usual you show NO respect for those who have been
>there.

The point is, as usual, there is one way - Ed's way, and no other way.

I have talked to MANY people in the fire service who have told me the minute counter from dispatch, among other things, helps them manage time on SCBA. Either for themselves when inside, or outside, as an IC for accountability.

This has nothing to do with RESPECT, but your attitude. You have to take the stance of "WRONG, NO - YOU ARE INCORRECT". This point is a matter of OPINION. Granted, it may not be written in any service book, operating procedure, handbook, guideline, etc - that the timer from dispatch CAN or SHOULD be used for SCBA management, but it IS. And I say it IS because I've talked to more than one person who has. So AGAIN, it may not be official,

it may not be documented, it may not be policy, but it IS used, somewhere, by more than one person. I have, also, again, heard a number of agencies when given say a "30 minutes elapsed" from dispatch say "You can disregard the time count, I don't have anyone inside on air" which to me indicates the main reason to them for the count was for people on SCBA's. Again, yes, it's used for other things, but this to me indicated it at least helped with SCBA time management.

Respect: I respect everyone's right to an opinion, which is something you obviously don't. I make a statement that I know of a number of firefighters who use the timers for SCBA management, and you go and say "NO! WRONG!"?? If you expect others to respect you, respect them also. The time management for SCBA comes from people who have been there.

>I know your approximate age and I am TWICE that. these are NOT my opinions
>they are from experiance. Show more respect

Ed: I am 28. Respect is something you earn, not just get due to age. It's not just "Congratulations, on your 40th birthday, you get respect from everyone under the age of 25." And when I state what I have been told by a number of people, and you say "WRONG!" you get one more step away from earning my respect.

> You'll NEVER get as much experiance as I have simply because the fire
>service doesn't have the fire load it did in earlier years.

That's a pretty long shot comment. Granted, I'm not going to (at least in my current mindset) become a full time paid firefighter, but I could go to say New York's busiest fire company and get the same amount of experience you have. Not around here, you're right. Not as much fire load. And, as I'm almost 30, and the fire service isn't a job you see many 50 year olds on the front lines, you're probably right. If I were 18, and went out to FDNY or Chicago fire, yes, I'd be able to get as much experience as you.

>Equipment is better, faster and especially building and fire codes are
>more strict. Sprinklers are in lot more buildings as are smoke detectors.

And hopefully it will save lives, and I hate to say, put a lot of firefighters out of a job, or at least give them a lighter work load. There's still old buildings everywhere which don't meet todays code, but meet the code for when they were built that are disasters waiting to happen.

> I wouldn't even want to guess how long it would take a member of
any
>fire dept , Reserve or not .. to roll on as many greater alarms (54) as I
>did
>between Sept 1970 and Sept 1971. Probably at least 5 - 6 years.

FDNY or Chicago, maybe. Out here? Probably not.

>there is nothing you can do about it , just consider those before you have
>the experiance and you don't.

Ed: You have a lot of good experience to share, however your attitude and ego often show WAYYY too much.

Everyone is entitled to an opinion, everyone is entitled to have a say in something, and just because others do something that's not standard or not written, doesn't make it WRONG.

AFAIK, there's no policy or guideline that says you CANNOT use the elapsed time from dispatch for SCBA management. No one (I hope!) would ever RELY on it, but it can help. As just today at this fire, dispatch came back and said something to the effect of "Sorry, I'm a few minutes late, for your 30 minutes elapsed." The IC then advised dispatch they could terminate the time count.

Ed - that isn't what this COPWATCH is.....read the first post and the article.....it about these yahoos running around with video cameras trying to catch SJPD officers doing something they should not be doing.

I wish the show COPS (which by the way is ON as I type this ((and hearing the BAD BOYS THEME LOL)) would do something local like SF, SJ or Oakland.

they did several episodes in Sac which was cool.

Feb 21, 2005

SALINAS, CA - A 40-year-old Salinas man died Sunday, one day after struggling with police officers who fired several Taser rounds to subdue him, Salinas police said today. Initially hospitalized in serious condition after the 1:30 p.m. incident on Saturday, Robert Clark Heston was pronounced dead around 7:30 p.m. the following day, according to Salinas police Lt. Kelly McMillin.

Authorities initially were called to a home in the 100 block of Rodeo Avenue after reports of a fight between Heston and his 66-year-old father.

Officers left less than an hour later without making an arrest, only to be called back to the residence minutes later after Heston allegedly started assaulting his father.

Police fired several Tasers to bring Heston under control but the man allegedly continued to struggle with officers on the ground, according to police.

very odd.. the last i heard was the suspect got off at central san rafael and headed back southbound 101 possibly towards 580. Now i hear nothing at all for the last 5 min. No code 33 beep.. No traffic at all.. Nothing on SO, CHP or any local PD.. sigh.. oh well i dono what happened. time for bed. I will read about it in the paper i guess.

nick, there is more complete story, and here are some details.

that story includes heston's "lengthy history with local law enforcement", known drug addiction and a penchant for violence when confronted.

and includes a history of 14 arrests since 1993, most for being under the influence of cocaine or methamphetamine, for assaulting police officers, punching his own mother in the face, being in a drug-induced "excited delirium,'' and beating parked cars with chains and a hammer.

heston was released from salinas valley state prison 1/23/05 after serving less than one year of a three-year sentence for a probation violation.

and according to police chief ortega cited in bay city news, here is what led up to the taser fire saturday:

at 1:34 pm officers were called by heston's 66-year-old father, who reported that his son was tearing up the residence. six officers including two sergeants responded to the scene, and spoke with heston's father on the front porch of the home. heston's father did not want to press charges, but requested that his son leave the home. officers asked heston to leave, but but he refused. no crime was being reported, the officers never entered the home, and were unable to evaluate heston for signs of drug influence.

after leaving the home, officers were called back within three minutes. the front yard was now littered with items from inside the home.

heston could be seen dragging his father across the floor of the living room by his arms. once heston saw the officers he began throwing items at them.

the first taser round was shot by sgt. michael dominici, after he was struck in the chest by a wooden pole by heston, who then threw a large brass weight from a grandfather clock at another officer, and the series of taser deployments appeared to have minimal effect.

after about the ninth deployment of an electric shock heston fell to the ground, but would not allow himself to be handcuffed.

he was shocked again before officers were able to apprehend him, but he became unresponsive shortly therafter. officers immediately administered CPR and were able to regain heston's pulse before he was

rushed to Natividad Medical Center.

he died the next day at approximately 7 p.m. an autopsy and toxicology reports are still required to determine cause of death.

37569. Feds Stop Oakland's Plan for Going Digital

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-02-26 16:16:49 UTC

A news story in this morning's Oakland Tribune (Saturday, February 26, 2005) suggests that the Feds Dept. of Homeland Security has advised Oakland not to buy a new "digital" radio system. The Feds want Oakland to demonstrate that its communication plan will work with the adjacent counties. This coordination of plans makes evident what scanning listeners have suspected for a while that the local police and fire departments are soon going to move away from the standard "trunking" systems that have been in use for the past ten years!

This is a new grant requirement for this year (I was reading the packet just last night) if you want federal money
for radio systems. (how most new systems are now funded since everybody locally is broke these days.

All grants have to be approved by the state telecommunications rep. for regional/national interoperability under the National Incident Management System.

Should be interesting to follow the outcome.

Actually I think it will got the other way. MORE agencies will go P25 or ProVoice
digital/trunked/narrowband.

> ten years!

That is an interesting interpretation of what the story says. In my opinion it is not an accurate interpretation, however.

Some history:
From the late 1970s through about 2002, public safety trunked systems were built to the "Project 16" (P16) standard for public safety. All three system architectures in use (SMARTNET, EDACS, LTR) meet the P16 standard - but do not provide trunked interoperability between platforms.

Oakland, Richmond, and BART operate EDACS networks. San Rafael operated a LTR network for some time. Santa Clara City, San Francisco, Alameda County, Pleasanton-Livermore, and CALTRANS are Smartnet systems.

An Alameda County system user can switch to any of the other SMARTNET systems (if programmed into their radio), and operate as a user of that network.

LTR trunked system users cannot communicate with either SMARTNET or EDACS users.

A BART police user can switch to the Oakland or Richmond systems (if programmed) and operate there.

But a BART police user cannot switch to the San Francisco or Alameda County systems and operate there, as the technology between the trunking networks is not compatible. (This is why monitoring EDACS on scanners was an issue for some time - it is a different trunking technology.)

For a number of years, a committee made up of public safety professionals at all levels (fed, state, and local) and of the manufacturing industry have been developing a new open-archetecture standard for public safety digital communications, which meets the operational requirements of public safety in the United States. This

effort is called "Project 25" (or P25).

The Phase 1 P25 standard (ANSI/TIA 102 Series) was first published in 1995, and has been adopted by the federal government for federal agency use, by the FCC for the new 700 MHz band, and by the public safety community at large as the emphasis continues on interoperability.

With funding and technical advice provided by the US Dept. of Homeland Security, public safety officials in Alameda and Contra Costa counties (including Oakland) have decided to lay the groundwork for a multi-county consolidated communications system that will meet the P25 standard.

Moving forward:
The story indicates Oakland is looking to replace their handhelds with a product not yet proven to be forward migrateable to the P25 standard. The DHS technical experts are concerned that -if- the product that Oakland is wishing to procure from M/A-COM does not have full P25 trunking compatibility, then the purchase would be a setback in the efforts to getting everybody onto the same operating platform.

The story states Oakland will be requiring proof of compatibility as a condition of the procurement, as verified on the Mesa, AZ P25 network. (The City of Mesa's network is one of the established 'proving grounds' for P25 manufacturers.)

More interoperability and P25 info:

Let me just follow up, and yes, this is off topic, but if you get a chance, check out the Carson Collection on DVD. I just yesterday got part 1 on DVD from Netflix, and I can't wait to get part 2. 99% of the jokes are still hysterical today. Granted, there's the 1 percent where you need to rewind to see the year to then 'get' the joke, but for the most part, his humor is timeless. Now the 1% I didn't get was probably because I'm too young or I failed history (i.e. Spiro Agnew WHO?) but for the most part, all of his jokes are still hysterical. There's a young Letterman, Leno, and even Albert Brooks doing a few hysterical impressions.

And the animals that he has on the show - WOW.

Check it out. Great for a load of laughs.

Evan

"Troyboy" maybe you should look at your own life or get one. If you have never dealt with the police ever than you must be very young or have your own strange little life. I did not and will not ask for you advice The only thing I want to reply too is your generalization and assumption that I have had "so many dealing's with the police" I have had one time in court and that was enough and it dealt with scanner law and the police lied about evidence and the judge dealt with it I have no record. And my daughter had one time in court and the police lied in court and I am sure if you took a poll the majority of defendant's would agree with me that the police will and have enhanced reality in court to make their case and in fact the judge's tend to back up the police use of enhanced reality and giving the officer's testimony more weight which is crap. And just because your a defendant does not make you less of a person or guilty of anything. Much like the current Tazer thread now it is predictably beginning to show the police will drudge up every nasty thing about the deceased they can and enhance reality like the wooden pole could of been a toothpick but we will never hear about it and what the hell is being in a drug-induced "excited delirium,'' If that is not somebody's enhanced reality statement I do not know what is, was this a qualified Doctor's opinion? And once again it was in the past not relevant to the situation now but throw it in anyhow I wish the dead guy could tell us all about that officers background, psychology, employment discipline problems etc.. In My humble opinion if six police officer's can not subdue a unharmed suspect without lethal force being applied they have a training problem and to apply a Tazer nine times is lethal force everyday more people die because of those things but instead of blaming the torture device they covet so much or their lack of training let's cover up the true problems with a fog of insults, irrelevant past history and innuendo and smear the dead man. A large amount of my family including myself have been involved in public safety Including Fire, Police, and FBI I have the utmost respect for police generally but it seems the general police mindset is going in the wrong direction towards a police versus the public mindset and a mucho black uniform riot gear take no prisoner's attitude instead of realizing they are supposed to be serving us not harming us.I also believe that part of the problem is the so called war on drug's which as allowed them so much leeway in violating our civil right's. This will be my last comment on this thread because I know I am not going to change anyone that wants to make kissey face with the Police Bob Webmaster http://bobonit.com (http://www.bobonit.com/html/bob_blog.html)----- Original Message ----- From: troyboym@... 37582. Code 6 question

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-02-27 05:20:28 UTC
From: Roger Strohmeyer
Topic: 37582 Message: 37582

I'm sure everyone hears it when a Police Officer runs a person Code 6 check for warrants (it's Code 6 here in Marin) and I'm also pretty sure everyone hears it when a Police Officer runs a device serial number Code 6 such as a "Sanyo car CD player". Now do they use the same database to check people for warrants as they do to run serial numbers for devices, guns etc. or is it all separated out into separate databases? Does dispatch really need to know if it's a "Sanyo car CD Player" or is it just the serial number of the device\gun what matters as far as the Code 6 database match is concerned?

Thanks,

-Roger

Well, this is a complicated issue and can very a little from place to place...

First regarding people, MOST (please do not start pointing out every example where this is not the case and in the bay area where several counties share regional systems..) counties have a LOCAL warrant database for people that have had warrants issued in the agency's own county. Alot of times this is the only place a name is checked since the officer may know this is a local crook etc. Also, most LOCAL databases allow for searches with limited information, i.e. John Smith about 25 years (didnt know exact dob).

Now, to check for warrants out of county most agencies access the NCIC wanted person system. The trouble with this system is that it hits off of the DOB so if you dont have that it can be a problem. Not every local warrant is entered into the National System, but most felony warrants are..

The stuff above relates to your question because the NCIC systems are actually accessed through a big computer switching system called NLETS (National Law Enforcement Teletype System). NLETS allows access to not only the Wanted Person System, but the Wanted Property System, the Stolen Vehicle System, and others including the California Law Enforcement Teletype System (CLETS). CLETS is where almost all stolen property in California is entered.

SO, your question about the name check and whether property is run in the same system can be either yes, or no, depending on the type of name check run. Reegarding your question about whether the brand etc matters...yes and no again. On a CD most of time you are entering just the serial number and the TYPE of property (CD, TV etc.), but when you get the return MANY CDs can have the same serial number so the other information is useful. Some items actually require further information be entered before the check can be run, like a gun needs the caliber etc.

This is by no means a complete explanation of this system, but I think it answered your questions...

Yes, thanks very much for the insight. It's just something that been biting at me for a couple of years now and I thought I would throw it out there. I did imagine it was complex though and you verified that.

Subject: [bayscan] Re: Code 6 question

Well, this is a complicated issue and can very a little from place to place...

First regarding people, MOST (please do not start pointing out every example where this is not the case and in the bay area where several counties share regional systems..) counties have a LOCAL warrant database for people that have had warrants issued in the agency's own county. Alot of times this is the only place a name is checked since the officer may know this is a local crook etc. Also, most LOCAL databases allow for searches with limited information, i.e. John Smith about 25 years (didnt know exact dob).

Now, to check for warrants out of county most agencies access the NCIC wanted person system. The trouble with this system is that it hits off of the DOB so if you dont have that it can be a problem. Not every local warrant is entered into the National System, but most felony warrants are..

The stuff above relates to your question because the NCIC systems are actually accessed through a big computer switching system called NLETS (National Law Enforcement Teletype System). NLETS allows access to not only the Wanted Person System, but the Wanted Property System, the Stolen Vehicle System, and others including the California Law Enforcement Teletype System (CLETS). CLETS is where almost all stolen property in California is entered.

SO, your question about the name check and whether property is run in the same system can be either yes, or no, depending on the type of name check run. Reegarding your question about whether the brand etc matters...yes and no again. On a CD most of time you are entering just the serial number and the TYPE of property (CD, TV etc.), but when you get the return MANY CDs can have the same serial number so the other information is useful. Some items actually require further information be entered before the check can be run, like a gun needs the caliber etc.

This is by no means a complete explanation of this system, but I think it answered your questions...

Roger,

First of all Code 6 is the biggest whore of a code used in the state of California. I know everyone knows that diferent counties use different codes but Code 6 seriously means something different in every county. As far as Marin County goes, Code 6 is the equvilent of 10-29 or running someone or something for wants and or warrants.

As far as property serial #'s go with running something in APS or Automated Property System (part of Clets), it is something that runs off of serial # only. The system does give the option to enter the description and attach it to th serial # for better identification of the property when the intial entry is being made.

Hope that answers your question,

Nick in Fresno - 00:40 Hours

Well, that's one way to describe a code! :)

I believe in Santa Clara, it means wants. I rarely hear an officer use it (i.e. I don't hear "Check Suspect for Code 6") but I hear dispatch using it to adivse of warrants - M for Misdemeanor, F for Felony, i.e. "Subject is Code 6-M."

Novato FPD is the only department actually using MERA (and not simulcasting lowband onto it) so far, although San Rafael is well on the way with testing their new TGs. So for now you can scan the rest of the departments on low band, but they'll all be on MERA eventually with no lowband, because every department will be dispatched off one talkgroup (much like the city of San Diego), then respond on their own zone specific seperate Control and Tactical TGs. Though that in itself doesn't mean they have to ditch lowband entirely (although the patching would be really complicated if they didn't, though not much more than it is now), it's pretty safe to say they're going to considering Novato already has (the only thing the control 35 freq still gets is the paging tones but no voice).

Yeah, if Novato dumped it , as you say , I would agree that the others probably would too. thanks for the info.

to Milt: looks like your going to need a digital scanner for Marin Fire pretty soon.

37615. Re: MERA and lowband

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-02-28 05:37:17 UTC
From: Erik
Topic: 37609 Message: 37615

Novato Fire was the first agency to go *full MERA*. San Rafael is scheduled for the next month or so. Then, the Ross Valley area will go in late spring, and Southern Marin shortly after that. The only hold out will be Marin County FD. The Bolinas radio site issue is far from being resolved, and MCFD has said that they will not go full-MERA until they have full coverage. The Bolinas site also affects the Marin County Sheriff going to MERA.

BTW, the ringdown tones on Novato Fire F-35 (46.36) are only until the MOSCAD/FireSCAD system is fully operational.

When all the East Zone (Smartzone simulcast area) fire depts are fully on MERA, the lowband transmissions (save for 46.28/37.10) should cease. We will still have VHF conventional analog equipment (portables/mobiles) for big mutual aid. Marin Co. FD will have MERA portables for operations in the East zone.

I can't recall any mention of *rotary frequency*. Maybe it's specific to your scanning radio. White 1 (154.2800) is the main statewide VHF fire mutual aid freq. What do you mean it *declares itself*?

hi erik,

thanks for your interest in helping: by "declaring itself", i meant
that when white 1 rolled up on the scanner, a text tag on my 296D said
it was a "rotary frequency". it happened a couple of times yesterday.
haven't seen it since.

it is yet another term / concept i am not familiar with --

i know, i know --'read the manual, stupid'...

well, bob -- interesting thought, you are correct: the text tag "rotary frequency" *did* appear on my 296d while sheriff, fire, and helicopter were being coordinated. i am starting to think the tag is idiosyncratic to the 296d, and that i mistakenly hit a mystery combo of buttons in error, in my frenzy to keep up with the excitement. i am lucky i didn't blank out everything!

but i will post to 296d list and share what i learn.. thanks for noodling the question.

Just FYI: CALCORD (156.0750) is the usual frequency for interagency air/ground coordination of helicopters.

The 296D group would probably have more info on that alpha message. Maybe *rotary* is a reference to *cyclical* or something like that (patched-together talkgroups)?

The Marin MERA system has the capability (dispatcher-controlled) of patching together several different talkgroups into a single TG.

> know if it's a "Sanyo car CD Player" or is it just the serial number of the device\gun what matters as far as the
> Code 6 database match is concerned?

Here in Santa Clara County Code 6, with the appropriate ALPHA code after it means that someone or something is wanted.

In California there are several systems, both local as well as statewide, that are checked when a person is "run." Just a couple are WPS (Wanted Persons System) and MUPS (Missing/Unidentified Persons System).

Basically, any stolen property, if the serial #'s were available at the time of the report, are entered into APS (Automated Property System). If a vehicle is stolen or gets towed from an LE agency it gets entered into SVS (Stolen Vehicle System).

Any additional descriptors of the item being run are extremely helpful in narrowing down the output possibilities. This just means that the dispatcher doesn't have to wade through thousands of entries versus 10-20.

Hope this helps.

Mike

Can we please stop posting these "I have gmail invites"? I see about one
every other week on just about every group I'm on. If someone hasn't seen
an invite and doesn't already have one, they probably don't want one.

Thanks.

37645. Re: [bayscan] Rotary Frequency

On the BC-785 & 796, if you hit the CHAN/FREQ knob, which has VFO/SELECT PUSH written underneath it, while on a conventional channel, the dispaly will read "ROTARY:FREQUENCY" or "ROTARY:CHANNEL"

It indicates what will happen if you were then to rotate that knob -- either manually tuning up or down from that frequency, or tuning up or down from that channel #.

Just to make this really fun...415 weapons call in Cupertino @ Stevens Creek Elem. School is in lock down. On CH 3 (P25) not sure the freq a this time....
Suspect seen in bushes near clasroom with a silver handgun.

Back to Comanche Trail.

CHP helicopter enroute.
Subject loaded his shotgun before dropping other rounds.
Subject is 5150/Bipolar according to parents who are also on scene.
Subject stated that if deputies chase or confront him he'l put a round into his own head.

Wow...and I'm stuck in the office! Bummer...

For those not familiar with the area, this area is very steep and heavily wooded. Many homes sometimes sparsely spread out and other times almost right on top of each other in other areas. The area they are in is known as Chemeketa Park just south of Lexington Reservoir. They are between Old Santa Cruz Hwy and Aldercroft Heights Rd.

Now we wait...

SFPD and SFSO are evacuating city hall , have most eveyone out now , doing a sweep to make sure all are out/ local news crews should be all over it as its fairly close to KRON and the others in the city.

OTOH the Santa Cruz Mountains incident is pretty remote..... but at least KNTV should cover it.....we'll see.....

Oh, I forgot. Just in case anyone did not catch this...

All normal West Valley traffic is being handled on TAC 4 Repeater (154.650 PL179.9)

I'm about to head home for the day. I'll keep monitoring but won't be able to update any longer. Could someone else take over for me?

Thanks.

Whoa there Bob - quite a few assumptions you're making. First, I'm sorry you read into my email address. Second, I stand corrected. My 15 years experience testifying in court pales in comparison to the two cases you've been involved in. You've certainly changed my stance - you have every right to label every police officer a liar based on your extensive experience.

Also, I'm sorry that I'm so strange for having no desire to become involved in situations which will involve the police in my personal life. But then again, you're the one running around with a camera. And I need to get a life?

Lastly, I didn't ask for your advice or opinion either, so I guess we're even. Of course, I find it ironic that you so freely share yours, but when somebody disagrees, you start crying the blues that you don't want to hear it.

37683. Re:My List

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-03-01 06:49:36 UTC
From: Robert W. Sanford
Topic: 37681 Message: 37683

Well he is gone :) Im pretty open minded but I have to think of the whole
and there are over 600 people on the list.

The bottom line is I like to have a list that allows for a "free and open
flow of information" that is not restricted.
I don't even mind people getting "off topic" a bit since there are other
things related to scanning that can be discussed.
If you don't want to read the subject matter just use your delete key as I do.

As far as my other site goes Scanning is not my ONLY interest or hobby and
photography is another, some of which is "adult in nature" ,
and which I make no secrets for as its listed in my yahoo profile.
I also love fire and law enforcement related photography.

When I moved to the Bay area from NYC some 6 years ago I couldn't find a
forum to discuss all the questions I had about
scanning in the Bay area so I created BayScan which has become a great
resource for this information.
I NEVER want to have to moderate the list since so many of the things that
are posted are "time sensitive", ie. fires, police chases.

Anyway in closing I hope you find this list as useful as I do and if you
don't ask yourself "what is it costing me?" ha, ok a little comedy.

Robert
BayScan

PS-WHY WOULD I SPAM MY OWN LIST???

To my knowledge, this website isn't moderated in the sense that someone reads the post before it gets on the list. Thus, Ed isn't censoring anything.

Just because something is off topic doesn't make it spam. I think the closest thing in this group to 'spam', and I wouldn't even call it spam would be the discussion about scanners unlimited. I wouldn't even call it spam since it's not a commercial message (i.e. Scanners Unlimited is having a half off sale!) but simply informational.

> and the intermittent porn spam

I can't recall the last porn spam I've seen here. Am I missing something?

>and the constant bickering and arguing.

You're going to have that with any group.

>Either your posts are shotdown by The Bayscan Nazi ED before they get a
>chance to even be posted because HE feels in his whacked out mind
>that its not worthy or a good post goes thru and is flamed by every

I could be wrong, but I don't think Ed is a moderator or has the authority to moderate a member, or even approve / disapprove a moderators posts.

>Most of them being people who have no knowledge of eith
>area other than what they have watched on cops or Third watch or L.A.
>law or whatever.

There's a lot of people with a lot of varying experience in this group. Without singling out people or naming names (although I'm sure you know who they are), we have at least someone with a city police agency, at least one with county, I'm sure someone from state, and maybe a lurker from the feds. Yes, we have the armchair quarterbacks, but we also have a good share of 'expert' opinions.

>Maybe this group needs to be actualy monitored by
>people who are into it othe rthan Robert who is to busy running his
>porn sites

I doubt you'll find many yahoogroups where the moderator moderates the entire group. Robert steps in when it gets out of hand, and puts those that need to be on moderation. But a group such as this, it would be impossible and useless to moderate everyone. Imagine if everyone were moderated - a post of an active incident would be useless.

>(Just check out his yahoo profile),and people wonder how
>the porn spam ever got thru??

I still don't know what porn spam you're talking about. I haven't seen it.

>well maybe one of you sherlock holmes wanna-be's can figure that out..

Well Watson, kindly educate me as to what the porn spam is?

If you're talking about the - well, I hate to use the term it's called, pump & dump, where a spam is sent to yahoo groups and as far as the moderator can tell, the person who sent it isn't subscribed to the group - this is a Yahoo problem. And I see them on every yahoo group I was on. It's someone (or some group) who exploited a hole in yahoo groups to post their spam. It wasn't just this group - I think it was in almost every yahoo group I'm on. But this was months ago. Old news.

Gary is partially correct. When Robert added me as a moderator, I subscribe to the same ideals he has. That would be to freely allow as much information as possible including the list to drift off-topic from time to time. For those who don't like it, they, of course have to option to either delete things or leave the list. The fact that the list has over 600 people tells me that Robert's' formula for a good list works.

I can censor those who are on moderation and the list is a short one. Any of you who have been on the list know by now that you REALLY have to tick Robert off to get set on moderation and EVEN worse get banned. Mr. As fan crossed the line and he is history

As much as I get into disagreements, I do NOT get into the vicious name calling garbage. I go by my experience and the fact that I am one of the older ones and simply have "been there / done that " than the younger guys. Trust me, I would love to trade shoes with my friend Evan who is ONLY 28 while I am 52 :-)

Now, back to scanning.....in fact, Monday was quite a day....the 51/50 in Santa Cruz Mtns, a "bomb"(which probably wasn't) at SF City Hall. Some poor guy on the tracks in San Jose loses his leg (and maybe his life) a Yellow Alert at Oakland Airport. its what we joined the list for.

37689. transition to trunking

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-03-01 15:34:46 UTC
From: garciaatsocrates
Topic: 37689 Message: 37689

Hi-

I'm a lurker on the list, having spent some time in Berkeley a few years ago. First off I'd like to say I think your list is fun to read and interesting, even if it gets "off topic" sometimes. It's a nice way to stay in touch with the Bay Area.

I'm submitting this (rather long) post because I am also a firefighter and EMT in upstate NY, and our county is beginning the transition to an APCO-25 digital trunked system. Up until now I have only taken a passing interest in trunked systems, but now I find people in county management asking me for input about how the system should be set up. I am familiar with all the horror stories of trunked systems gone bad, but it seems like much of the Bay Area is getting used to it. I understand the basics of trunked systems and talkgroups, but what I would like to understand better is how a trunked system differs from conventional in terms of user functionality. In other words, things like
- how much expertise is required on the part of the end user or the dispatcher, or is it pretty much transparent? We are discussing a feature called "dynamic allocation" that lets the dispatcher shuffle which radios are allowed in which talkgroups ... is this a neat idea or a cluster waiting to happen?
- do the channels/talkgroups used get assigned by the dispatcher or are they standardized within each dept?
- If there are more channels available, how do people know which channel the IC is on? How do units keep track of all the extra channels?
- are there "right" and "wrong" strategies for implementing talkgroups?
- Other than having two radios, what kinds of strategies are used to communicate with mutual aid units that are not on a trunked system?

If anyone has the time (and patience) to detail an example of how a worse-than-normal emergency (say, a large structure fire) might work in the context of radio transmission and who uses/scans which talkgroups, I would be grateful. Or, if you can point me to websites that discuss some of the aspects of implementing and using a trunked radio system, that would also be great. Thanks for reading.

73,
Mariano

Just a thought...I've noticed that those who complain the most post the least (if anything at all). I try to keep silent until I hear/see something that I think those on this list would be interested in tuning into.

On with scanning, as far as Monday being busy, it was actually busier than that.

During the 5150 call in the Santa Cruz mtns a 425 weapons call came out @ Stevens Creek Elem School. Two 8-9 y/o students saw a WMA hiding in the bushes with a silver handgun.

Then after that situation became Code-4 we had another 5150 in the Santa Cruz Mtns that also became Code 4 with a trip to VMC EPS.

Then I went home and enjoyed my family. What a crazy afternoon/evening SCCSO had.

From all I've heard around the office, the 1st 5150 call ended up just as it sounded over the radio. He was compliant, however, he couldn't remember exactly where he threw down the shotgun. No one was able to locate the gun before dark last night so they called off the search until sometime today. More deputies will go up there again today to search for it. Who knows, maybe they'll let me play too!

OK, enough blathering Mike. It's back into the woodwork I go until the next big SO call.

Mike@SCCSO

garciaatsocrates <msg5@...> wrote:

Hi-

I'm a lurker on the list, having spent some time in Berkeley a few
years ago. First off I'd like to say I think your list is fun to
read and interesting, even if it gets "off topic" sometimes. It's a
nice way to stay in touch with the Bay Area.

I'm submitting this (rather long) post because I am also a
firefighter and EMT in upstate NY, and our county is beginning the
transition to an APCO-25 digital trunked system. Up until now I have
only taken a passing interest in trunked systems, but now I find
people in county management asking me for input about how the system
should be set up. I am familiar with all the horror stories of
trunked systems gone bad, but it seems like much of the Bay Area is
getting used to it. I understand the basics of trunked systems and
talkgroups, but what I would like to understand better is how a
trunked system differs from conventional in terms of user
functionality. In other words, things like
- how much expertise is required on the part of the end user or the
dispatcher, or is it pretty much transparent? We are discussing a
feature called "dynamic allocation" that lets the dispatcher shuffle
which radios are allowed in which talkgroups ... is this a neat idea
or a cluster waiting to happen?
- do the channels/talkgroups used get assigned by the dispatcher or
are they standardized within each dept?
- If there are more channels available, how do people know which
channel the IC is on? How do units keep track of all the extra
channels?
- are there "right" and "wrong" strategies for implementing
talkgroups?
- Other than having two radios, what kinds of strategies are used to
communicate with mutual aid units that are not on a trunked system?

If anyone has the time (and patience) to detail an example of how a
worse-than-normal emergency (say, a large structure fire) might work
in the context of radio transmission and who uses/scans which
talkgroups, I would be grateful. Or, if you can point me to websites
that discuss some of the aspects of implementing and using a trunked
radio system, that would also be great. Thanks for reading.

73,
Mariano
KC2NPO

37703. Behemoth cranes will duck bridges

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-03-02 09:53:10 UTC
From: Robert W. Sanford
Topic: 37703 Message: 37703

Tere is probably some good maritime frequencies to monitor for this one in addition to the CHP when they have to shut down the traffic on the Bay bridge.

Behemoth cranes will duck bridges

Traffic to stop while ships bring Oakland port's acquisitions through Bay

OAKLAND The equivalent of a 24-story building will pass under the Golden Gate and Bay bridges next week as the Port of Oakland welcomes what could be its last two giant shipping cranes.

At about $7 million apiece, the 379-foot-tall cranes will give the port bragging rights for having the tallest cranes in the world.

But unlike previous huge cranes delivered after barely slipping under the Bay Area's two most famous bridges, this delivery is not expected to keep onlookers breathless.

That's because the cranes will be partially taken apart before they make their final journey through San Francisco Bay to the port.

"It is a little more complicated this time because they are taller," said Terry Smalley, supervising engineer at the port and the organization's unofficial crane guru. "But at the same time, it has more clearance so it won't be as touchy."

The cranes, built by theShanghai-based Zhenhua Port Machinery Corp., should arrive outside the Golden Gate on Tuesday. Once there, workers will begin dismantling the behemoths for a final journey under the bridges at about noon Thursday.

The port ordered the cranes a little over two years ago, when it amended a three-year-long deal with ZPMC, a company that flourished after the port asked it to build 12 cranes in 1999.

The new cranes will have all the latest technology installed and be able to reach across the largest ships now in use.

"They can service the biggest ships that are being built these days," Smalley said.

Each crane will have about 1,500 horsepower to lift containers from ships.

But while the port historically has supplied its berths with cranes, the industry trend is leaning toward having shippers supply their own equipment, making this delivery possibly the last one organized and run by the port.

"It's not our intention to do this anymore," said Maritime Director Wilson Lacy. "The biggest problem is, we don't know what size they want. It's like trying to buy a pair of shoes for someone else's kid."

While Smalley said the logistics involved in delivering the new cranes was made more difficult because of their size, the actual movement of the cranes through the Bay probably will be the easiest.

Engineers began planning how to fit the cranes under the bridges the minute the order was taken, Smalley said.

Although there will be more room under the two bridges while the cranes are passing underneath than in previous deliveries, Smalley said the Calif-ornia Highway Patrol still will set up a traffic break to stop cars as the cranes are moved through the water.

From: Evan Platt
Topic: 37712 Message: 37712

Amber Alert Issued for 3 year old abducted girl
Posted: Wednesday March 2nd 10:30 PM CT
Updated: Wednesday March 2nd 10:30 PM CT

Sacramento Police issued an Amber Alert Wednesday night regarding the abduction of a three-year-old girl.

Police are looking for a green 1999 Pontiac, Gran Prix, 2 door. The license plate number is CA. 5FRR110. The suspect driving the vehicle is Bennie William Guard, 42 years old. He is 6'2", 235 lbs. with blond hair and green eyes. The missing child is female, white, 2' 6"- 3', 30 lbs, with light brown hair and hazel eyes. She was last wearing a two-tone purple stripped shirt, purple pants with pink and white shoes.

The suspect is allegedly the live in babysitter. The suspect and victim were last seen at 5:30 p.m. last evening after dropping the victim's mother off at Sacramento State University. The victim's mother called police after 3:00 p.m. today. The suspect is originally from the Bay Area. The suspect and victim live at 3100 Jersey Way in the County of Sacramento. Call 911 if you information on this case.

My girlfriend also let me know the Amber Alert sign said something about a Green Honda Accord with a broken right rear window, but don't see anything on the amber web site.

Evan

Hi all,

A few months ago there was some discussion regarding the PL/CTCSS tone for Santa Clara fire on 153.965. What was the outcome of that discussion thread?

Did they change their PL from 131.8 Hz? I am doing some programming and 131.8 does not appear to be accurate any longer.

Thanks,
Brian in Campbell

No PL, and a annoying hang carrier for 3+ seconds after dispatch stops
transmitting.

Evan

I just saw on the news that they are going to bring them in tomorrow now..

That's great since Im off and can try and get some pictures of it going
under the Golden Gate near me.

Im curious how many Ham Radio operators we have on the list, my call sign
is WB6NYC.
We should compile a list of those who are hams, back in NYC we used to have
a weekly scanner net on one of the repeaters.
I would love to do that out here.

Subject: Re: [bayscan] the cranes?

I just saw on the news that they are going to bring them in tomorrow now..

That's great since Im off and can try and get some pictures of it going
under the Golden Gate near me.

Im curious how many Ham Radio operators we have on the list, my call sign
is WB6NYC.
We should compile a list of those who are hams, back in NYC we used to have
a weekly scanner net on one of the repeaters.
I would love to do that out here.

Is there an equivalent to "notams" for maritime use?

Oh, the "5150" repeater. It used to be frequented by some alpha hotels.
What is is like today?

Did I really forget that critical little piece of information? Sorry about that... Total brain fade. Must have been all of those 9th graders I taught today! If I recall correctly, and that's a long shot today, it was on Hale Avenue, but that's all I can remember.

As the kids say - My Bad!

From: john Beatty
Topic: 37717 Message: 37730

J.B. AD6WX
Usually if you are travelling over GGB if you look about
1/2 mi. out, on the north side. There is a bay, this is
where the big tractor tugs and sometimes the pilot boats
hang out, waiting for their charges. I'ts called Bonita cove,
the lighthouse on the point is the "Point Bonita Lighthouse".
The deepwater part of the cove runs from 43 to 50 fathoms.
Also just for S&G if you look just a little further, past the point,
When the surf is up youi will see waves breaking over the
" Four Fathom Bank" when this happens, the surf is "up"
at Mavericks.

Danny, do you know K6RO, Ken in Oakley? He is a serious contester with five large towers, monoband antennas on several HF bands, etc. Besides tthat, he's a terrific banjo player. I have the good fortune to play gigs with him on occasion. Jim

Nice system! I can hit two of the sites from a HT on low power, although my battery is dead so I can't get much more.

Any ETA for the linked sites? That would be awesome.

That is going to be a mean emergency/disaster setup when you get all of
those linked
and simulcast.

I'm not quite a HAM yet but it's safe to say that my scanner interests derived from my Dad being a big HAM radio operator. W6IUS and WA6TPF not to mention my high school (San Rafael) HAM club\class call sign WA6RTZ. (1979)

I suppose schools don't do that type of thing anymore <sigh>....we had sailing class too. :-)

Gah! I wrote an email over the course of a few hours and just lost it because my session expired. Stupid Yahoo mail. Maybe I'll write it again later. Long story short: I like the net idea. Perhaps, since Matthew's system has commercial controllers, we (he) could enable a multiple-PL system to permit normal chatting and the giving of "heads-up" to interesting calls.

If nothing else, a breakfast and/or weekly net might be fun. This thread and group has gotten me excited about radio again. I've been pretty inactive since I moved up here from L.A. The agencies with and for whom I worked were (in my admittedly biased opinion) among the best on the air anywhere.

Gordon (normally in the AMBER but in the VIOLET at the moment)

I frequent the KU6V repeaters; 224.18 or 444.9. These are linked and have great coverage.

I'm usually on during the early morning hours (0615-0630) and in the evening on the way home (1700-1730).

From: caladded@aol.com
Topic: 37787 Message: 37787

She sure made a lot of mistakes ....refered to the runway as 20WEST
instead of 30 left

Engine 20B tranmitted plane was on final
she repeated is as plane was on FIRE (yikes)
((to which E20B corrected her)

Engine 30 went on scene at Station 20 , she repeated it as Engine 38

She cancelled Engine 1 and Truck 1 which was a mistake as I known they roll
on the airport on an alert 2 (then DID repond)

must be a newbie.

From: Craig Rose
Topic: 36761 Message: 37789

They sure did call the 3rd. I guess BATTALION 1, once he got full information, decided to play it safe and call in the cavalry - so to speak.

Kind of strange to hear that particular dispatcher flub so many aspects of this incident. I've heard her under similar circumstance and she's always been rock solid. The "on fire" v. "on final" is particularly scary!

Yeah, thanks Ed and Craig for highlighting my mistake. I used to live next to SJC, close enough that if the terminal were on the west side I could have walked there. At that time I listed to 124.000 routinely. I now live even closer to Moffett than I did to SJC and monitor their tower channels. That's what occasioned the mistake I made between 30 and 32. I've been listening to 32/14 for so long that 30/12 got pushed out of my brain. For the record, from my office next to VMC I do have a view of the 30 approach.

BTW, the weirdest thing I ever heard was nothing, in the days after September 11th when the ground stop was in effect. Coming down Coleman and seeing no movement and hearing nothing on Tower was just plain freakish.

caladded@... wrote:
what is 32 ? what is 14 ?

runways are 30 and 12

Hi Gordon,

I remember it well. It was about the spookiest thing I can recall.
There was a single flight that evening that was inbound to SFO, and if
I memory serves, it was a medevac flight. Other than the military stuff
that was up, that was it. SILENCE.

I would really like to hear recordings of the ATC comms during that first couple of hours, how they communicated to G/A aircraft who didn't have ACARS or other out-of-band comms to be told what was going on. At that time I had my most elaborate shack to date, but for some reason I didn't think to record anything at all that first day.

I have some recordings of the various ATIS freqs over the next few days, which are a little spooky, especially Moffett's reporting their ThreatCon status.

From: caladded@aol.com
Topic: 36761 Message: 37794

well Gordon , at least you didn't say 20 WEST like the dispatcher did.

Craig has a good point, I very rarely hear ANY San Jose dispatchers make mistakes.

If you think seeing Mineta / San Jose with NO traffic was strange , you ought think about SFO. San Jose shuts down at night where SFO NEVER shuts down and has so much more traffic. even during slow hours you catch a plane landing every so often with red eyes and such. During busy times they flat out are loaded. I have sat and watch as many as 20 sitting on the tarmac waiting their turn to depart. Riding my bike south out of the city coming home on 9/11 was strange to see no planes out there and equally strange and scary to see numerous SFPD and CHP guys by the Millbrae gate sporting rifles.

Interesting you should metnion the mistakes made by the dispatcher. I had a friend in Modesto that tried out the dispatching gig for Stanislaus Co. and one of the big things weighing on a dispatchers shoulders is if they get the information right or not. And if they don't they're held responsible for any unfortunate occurances...

My 2 cents

Hi Evan, didn't get your reply until I got home today. I thought 145.31 was in Valejo but there must be another one near you. I have your CD's ready to mail, just have to get my XYL to address the envelope. I didn't label the CD's in print but one has voice ID's on it, and the other one surprisingly enough comes up when you put it in your computer if you use Winamp. It's called, Got Rhythm and the band is called Hot House. I was surprised to find it ther when I put the CD in to copy for you. 73's, Jim

There's some factory next to 101 near the Corte Madera DMV that puts off huge plumes of steam over the freeway. If you couldn't find any related radio traffic that coulda been it. That place used to freak me out when I was little I thought it was toxic smoke. (Hell maybe it is, anyone know who owns the building?)

Danny, guess you and Dennis can start a net in Co Co County or, go climb
K6RO's tower with your handheld, maybe you could hit the Sunnyvale machine
from there! Jim

37825. Re:Scanner Net

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-03-05 05:27:45 UTC
From: Robert W. Sanford
Topic: 37808 Message: 37825

I think its a great idea but we will have to see what the best time might be for people.

Back in NYC we used to do it on an off day like Tuesdays since people were not usually as busy.

There would have to be a "net control" of sorts also, we used to run it almost like an ARES or RACES net with taking the check ins then an open forum for topics.

Ill see if I can remember the whole format we used since it worked nicely.

Robert
WB6NYC
BayScan

37827. Time estimate for Cranes Tomorrow

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-03-05 05:51:09 UTC
From: Robert W. Sanford
Topic: 37827 Message: 37827

I heard that the latest estimate is the cranes should be passing under the Golden Gate around 11:30 am tomorrow and under the Bay Bridge around 1:00.pm Of course this all could change when you moving something the size of a 24 story building!!!

I guess Vessel Traffic on 156.700 in addition to the standard Coast Guards freqs like 157.100, 157.050, and then the Media chopper frequencies.

KRON 4 will be covering it live tomorrow

37828. Re: [bayscan] Time estimate for Cranes Tomorrow

Yeah, sounds good except I can't hit any of the repeaters we've suggested
in Sunnyvale. :)

37830. SF Homicide?

Yahoo group: bayscan (2005-01 — 2005-05)

From: stfucode3
Topic: 37830 Message: 37830

Just my luck i blew a fuse in my car and could not listen to the scanner. I was driving home from Sunnyvale just now on 19th ave. and was the 1st car in line stopped by SFPD as around 10 code 3 units arrived to the scene of god only knows what. I saw a body laying on the side walk and about 30-40 asain young males standing on the sidewalk. They shut 19th down totaly and fire/ems arrived. I watched because i could not move and it did not appear that they transported who ever was laying on the sidewalk. Then SFPD put up crime scene tape finnaly we were allowed to drive around the scene on the wrong side of 19th. So i didnt get to see much more. I thought 4 sure Ed or someone would have heard this go down! =)

News media were arriving just as I was driving past.

When I worked in Sunnyvale, I would see those mass gang arrests. Four cops, eight bangers. What the S'vale PD would do would be to make them take off one shoe and sit on the curb. I guess the one shoe would make it harder to run (out of balance). I'm not sure what good it did to have them sit down other than to slow down their escape.

I will try to see if I can reach it from San Jose. I wonder what interoperability problems us hams may encounter, probably not as much as the Part 90 guys. Most hams have both 2M and 440, none use trunking, a few might have APCO25 (not used on ham bands), the most challenging is a repeater everyone can reach but much area can be covered with linking.

The 9 AM Talk-net on N6NFI (stanford repeater at 145.23) on weekdays has a lot of people and their net control keeps things reasonably organized. There are times when some get long winded, the repeater has a timeout. Maybe this can be an example for a Bayscan Net with a lot of people.

Mike K6MFW

(I heard the callsign K6SCC and immediately recognized it as Brian, we swapped a couple of scanner stories, i.e. AAA policy is they do not tow Hummer 1s).

If we all have UHF capability, I think Matthew Kaufman's machine(s) would be the best bet, assuming he'd be OK with having a net on it. The repeaters aren't linked, but since it's open PL on receive, you can probably receive a few machines you wouldn't be able to transmit to. :)

i saw someone laying on the ground with people around him.. maybe
there was something to do with the gas line under the
sidewalk...mind you i
was driving by... i did not get out and ivestigate..thats why i
posted
here.. to find out if you guys knew what was going on..... .. ..
homicide
was just a total guess btw

37844. GPS lock?

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-03-05 19:50:05 UTC
From: jim gammon
Topic: 37844 Message: 37844

I checked out the system and am going to program it in my HT. Can someone explain GPS locked? How can you synchronize an oscillator using GPS?
Thanks, Jim

37847. RE: [bayscan] GPS lock?

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-03-05 20:44:22 UTC
From: Matthew Kaufman
Topic: 37844 Message: 37847

Frequency-synthesized transmitters use a phase-locked loop (PLL) to keep the transmit oscillator on frequency. It divides the transmit oscillator down and compares it to a reference frequency. Usually that reference frequency is simply provided by a crystal oscillator inside the transmitter... But for simulcast and other cases where you need extremely accurate transmit frequency control, that oscillator is usually a more stable external oscillator. Two common choices are a rubidium or cesium oscillator or a very stable crystal oscillator that is disciplined to the precise timing available from a GPS receiver. (Essentially borrowing the accuracy from the rubidium or cesium clock on-board the GPS satellite).

In my case, I've found a *very* inexpensive way to modify my repeater transmitters to accept an external 10 MHz reference instead of the normal on-board 12.8 MHz reference, and am using surplus GPS-disciplined oscillators (HP Z3801A) with 10 MHz outputs for transmit frequency control. Not all sites are modified yet, and not all the GPS antennas are installed at sites that are modified... The only complete one is Mt. Allison, and even that needs an upgrade in its GPS antenna to add some filtering to block noise generated by the TV transmitter overhead.

Matthew

I got got back my Uniden BC245xlt from the Uniden Repair Service. Now
I have to reprogram all the local frequencies. Do anybody here know
if San Mateo EMS/AMR still uses:
482.315 ? or
482.762?

If not, what are they on?

Thanks,\
Milt

Hi and thank you Matthew. So are you getting constant reference updates
from GPS receivers at each site?
I programmed all six machines in my HT but can only hit two sites using an
outdoor antenna and a 25/35 watt Mirage amplifier. I guess they are the two
most northern sites as I am in El cerrito north of Berkeley. Jim

That is exactly what the Z3801A is doing internally, yes.

Well, you should be able to tell which machine by the CTCSS tone. I'd guess you can probably hit Allison and Umunhum from there.

Matthew

Ps. A lot more people have keyed up the repeaters than have ID'd on the repeaters today, I notice. I don't mind people doing coverage checks, but the occasional station ID would be appreciated. You won't be forced to talk to anyone.

Steve , these are the frequencys I use and I get Oakland fine

866.1250
866.3250
866.4000
866.6000
866.7000
867.0500
867.3000
867.5750
867.8250
868.1750
868.4625
868.5625
868.8250
868.9625

Some will tell you to leave the 5th position blank .. they does NOT work for me , the above work and I get both Oakland Fire and Oakland Police just fine , many talkgroups.

btw , I live in East Palo Alto

From: Joe
Topic: 37861 Message: 37861

Hopefully this doesn't spur another long thread on Code 3 driving or the like, but I'd like to see if anyone has any historical knowledge of what sirens were used by SFPD during the '60's and 70's when REAL sirens were used, not the electronic peanut whistles of today.

At that time the SFFD used Q-2's with the exception of Chiefs cars which were equiped with Federal model 76, dual-tone mechanicals, (the nicest sounding siren ever made).

SF City Ambulances, (the potato chip trucks), were equipped with Sireno units. King American Ambulance ran B&M Super Chiefs, while Federal Ambulance ray Q-2's.

What did the large SFPD partol wagons have on them? There was a mechanical siren mounted sideways over the windshield. It had a snout on it that faced downward. I never heard one. Also, what did the police cars have? I never heard one of them either.

My appologies as this isn't pure radio-related, but I thought you guys might have the information.

Thanks...

Joe

Joe ....thanks a MILLION, now I can't sleep.....I, among a few others on this list "should" know. But my focus in those years had a lot more to do with the SFFD and not SFPD, I certainly remember the wagons and the designator was 12 such as Central 12 , later become 30 .

But can't remember the sirens, but maybe it will come to me. I do remember, for the sake of the topic, SFPD cars prior to light bars ran one steady red light over the driver and a spotlight in the middle of the roof which the "shotgun" officer would use to flash thru intersections to warn cars they were coming thru. and the siren/speaker next to it. They had 2 rear/roof mounted lights, one amber one red. This was long before they started using blue.

I think the GPS birds have one or two cesium clocks in them, so the GPS
time standard is pretty good.

There are roll your own solutions as well:

I think this is cool. I never knew the names of any types of sirens on any vehicle.
Does anyone remember the small sirens you could get in the 60ies and put on your bike? You would attach them to your front wheel and pull a short chain to get the rubber friction wheel on the siren to contact the tire. I had a number of friends who had those and man, when they came screaming down the street full speed--full siren, you'd think a bunch of CHP motercycle units were descending on you. There so great I'm sure you can't find them anywhere in this country at least. If so, they are probably illegal.

From: inigo4688
Topic: 37856 Message: 37865

Hey Steve, You're bound to be making the exact same mistake I made when I first got my Pro-93 (little less channeled brother to the Pro-95) a couple months ago and programmed Oakland with Win93, which is pretty much the exact same program.

- Make sure the EDACS frequencies are in the correct order.

- Make sure you start on location 01 of the bank you set them up in, not 00. So when you look at the first freq on the scanner in manual mode, on the top left its memory channel look like "Mx01", where x represents the bank number you decided to keep oakland in. Just drop a random freq in the "00" location; Berkeley PD supplements oakland quite nicely.

- Make sure that in the column of win95 that says "Rx MODE" to the right of each freq is set to "EDACS" instead of "FM" (its default setting).

- LAST BUT NOT LEAST (I've made this mistake so many times): Set the bank TYPE, it just says TYPE on the top right corner, to "EDACS" instead of "Conv" (Conventional).

You should be set. Happy scanning, Oakland is really interesting to listen to; especially the 100+ car street races at 1 in the morning on "sideshow" and the Narcotics unit following crack dealers around on the Tactical Channels. :-)

I had one of those sirens on my bike , the advantage of San Francisco is the fact that you could really get the sirens screaming because of the hills , you could really get up some speed (bit dangerous) NO bicycle helmets in those days LOL

Yes, the ARRC 23cm system is great: I use it all the time. The downside is the relative scarcity of 1.2 rigs. I have two: a TH-59 H/T and a TM-541A mobile/base. I would like to hear more people on 1.2, but then that would drive up the price of equipment!

From: sixbyfire
Topic: 37875 Message: 37875

I don't know the whole story, but Belmont and San Mateo fire units are responding to southbound 101 at the Ralston exit. Per control 2 (154.37) this was the end of a lengthy pursuit with the suspect crashing and then throwing rocks at the pd. They then reported shots fired and 101 IC is requesting an air ambulance.

I don't usually monitor the San Mateo County Green channel, so I have no further on the pd side of things.

Topic: 37875 Message: 37876

101 IC requesting to cancel the ground ambulance and the air ambulance, also added they will let CHP make the notifications. Also reported CHP officer with some sort of injury, it doesn't sound good for the suspect. 101 IC reports the crashed car is in a ditch and he is wanting his companies to check for fluid leaks.

http://www.andromedafilms.com/Firehouse/teresi_007.jpg

http://www.andromedafilms.com/Firehouse/teresi_008.jpg

An extremely sad situation as a wheelchair bound woman in her late 40s
or early 50s died in this fire. Her husband had left the house to walk
to the store and was returning when he discovered the house engulfed in
smoke.

Any questions, let me know.

37878. Stabbings in San Jose

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-03-07 00:59:45 UTC
From: Craig Rose
Topic: 37878 Message: 37878

Second stabbing in less than an hour in San Jose. First one was a non life-threatening attack on a Hispanic male at the San Jose flea market. No suspect has been apprehended.

Another stabbing (10-71 in San Jose) has occurred, but this time the victim looks to have several stab wounds, including several on the back and is now being called a coroner's case (10-55).

This latest event took place near 1436 Clement.

Partial list of units:

61S2
61S5
61S6
61L1
61L2
61L3
61X9
6L10
6S10
8780
5045
2994
2999

Current event working on San Jose 6 - 460.325

Topic: 37880 Message: 37880

Lot of stuff today including this fire. I guess thats 3 stabbings with at least one being a 187 that Craig mentions. I wouldn't be surprized if the one I heard early has the same result.

the Incident at 101 and Ralston is now listed as an officer involved shooting. one witness on KRON did say the perp got out of his vehicle with his hands in the air but disappeared behind some vehicles when CHP officers shot him.....he is 10-55 Naturally a major investigation is still going on. KRON indicated the body STILL had NOT been removed.

And there was a major diesal spill in the east bay on Highway 4 this morning , some may have gotten into the waterways. large amount spilled

Heh, get in line :-)

I LIVE IN OAKLAND and I have a hard time receiving it. Even in my truck, I completely lose it on I-980 from about Macarthur BART down to I-880, when I get it back again. Lots of people whose lives depend on it can't get it either in various parts of the city.

As this is all over the news now, I can say it sure was an exciting one to listen to. 115 mph up and down the Peninsula, much of it through center dividers and shoulders. You could tell this guy had a death wish.

That said, this tragic ending seems a clear case where the use of a taser would possibly have saved a life (despite the recent bashing of their use). Unfortunately, CHP doesn't issue them. The CHiPpies were asking for Belmont to respond with "less lethal" options, but apparently the suspect rushed officers with a cinder block (or something similar) before Belmont could get there.

thanks for the update , one of the witnesses had mentioned when the perp got out of the car he , at first , had his hands up , but then disappeared behind a vehicle and then the wit heard 8 or 9 shots.

btw, Santa Clara S/O also does not use tasers at this time.

The Coit tower incident came out as telegraph place which is actually about a block and 1/2 away. the parking lot for Coit Tower is Telegraph boulevard. RC 1 found the cops and victims.

The Laguna / Bush came in a few minutes later

I can't recall EVER hearing so many stabbings in such a short time . 3 or 4 in San Jose , 1 in Hayward , 3 in SF all in the last 36 hours or so.

37899. Good scanner / dual band ham HT

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-03-07 18:44:12 UTC
From: Evan Platt
Topic: 37899 Message: 37899

Just picked up a Yaesu FT-60 dual band (2m / 70cm) HT. Small size, 1000 channels, 6 character alpha, and incredibly priced - $199. The only thing close is the VX-5 at $219 with a $20 mail in rebate.

Granted the VX-5 has AM medium wave and shortwave, as well as 6m transmit, however it only has 220 channels. I had one a while ago, and the 6m was useless - couldn't hit any repeaters without using a real antenna - and the stock antenna with the 6m tip was impossible to carry around - on the belt it would stab me in my armpit. Same with shortwave - can't recall ever hearing anything on it. Granted it was nice to have the ability to receive it, but that was about it.

I was looking to pick up a scanner and a HT, and this solved both problems. Granted it won't do trunking, but it server just about every other purpose I needed. Oh, and since I have a VX-800 (commercial HT), it uses the same drop in rapid chargerl. The battery from the FT-60 will work on the vx-800, but the vx-800 battery won't work on the ft-60.

Date: 2005-03-07 18:36:02 UTC
From: Evan Platt
Topic: 37901 Message: 37901

Listening to Sunnyvale PD (482.9625) on my mobile, I saw my signal strength bar going off, but no signal (i.e. different PL). It lasted longer than the morse code ID, so I turned off PL, and I started hearing Med-9 traffic (453.1). Well, that's all I can assume it was - it's Med-91 dispatch only (856.4375). And side note, for anyone interested in Santa Clara Med-91, 453.1 is the same as Med-91 but only dispatch, no mobiles. Plus, better signal (at least since most receivers have better sensitivity on UHF than 800).

Was this a IF on the radio (Kenwood TMG-707)? Something else? It mainly occurred at El Camino & South Sunnyvale was where it seemed to be most pronounced.

Thanks.

Evan

Heh, there was a old clip from the Tonight Show where they had a baby bear on, and the bear starts looking around and jumps over to Ed McMahon's coffee cup, and starts drinking.. Johnny is like "Ummm you may not want to let that bear drink from Ed's cup.. pretty soon the bear will be like 'Hey man, do you have any chips or dorritos?'

Evan,

I looked at the FT-60 and ended up getting a VX-2. It was $139 from Universal Radio, has 999 memories that can be organized in up to 20 bands, and is just about the smallest two way I've ever seen. No drop in-charger but the battery is a standard Nokia cell phone battery so new batteries are about $20 instead of the usual outrageous battery prices. It's only 1.5 watts output but I can hit just about any repeater once I replaced the terrible stock antenna with a Comet SMA3 tri band. It covers AM broadcast all the way up to 999 mHz except for

cellular. It's a good deal for someone looking for an HT/scanner combination as long as trunking and digital aren't needed.

Regards, Jim

I'm still in Ukiah. I will check out the NorCalOnlineScanning group as well. I've been a member of BayScan forever... never even thought about there being a local one.

The last hot call I heard was a year or so back when the police officer was shot in the Wal-Mart parking lot. Amazing story, for those who haven't heard it. I can look it up if you would like.

With my new job and 4 kids and buying a new house, I just lost track of my scanning. I'm just not getting back into it.

My local scanning page is: http://www.askgriff.com/ukiahscan.htm

I haven't updated it in a while. Maybe it's a good time. :)

Thanks,

Robert

I caught the tail end of this. San Ramon picked up one suspect in a
house in Dublin, and Dublin PD didn't sound too happy about that.
Another suspect was picked up at the Laborer's Union training camp.
Sounds like one is still outstanding.

There was a mention of a Danville witness.

KRON reported officers injuries are NOT life threatening. This started as a burglary call in which the 3 Black males were surprised by homeowners.....the Dublin officer stopped the suspects and the fight was on.....

AS Gary mentions, the coordination in this incident is NOT very good

ALCO 16048 is NOT code 33 for some reason, they are dispatching calls on it while the search is on. they also are using Tac 8 from time to time TG 16176

CoCo S/O is on 155.25 is quite active

well, its great if they caught all 3 . but it wasn't a great job , better co-ordination needs to be set up

perhaps following the ICS system Fire depts use would help. Why ALCO didn't have 16048 with ONLY this traffic is questionable , I can only guess they are short dispatchers.

they need to leave their EGOs at home too.

37920. Final on Officer Jumped in Dublin

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-03-08 01:53:38 UTC
From: John Gotti
Topic: 37920 Message: 37920

From what I understand the suspects were wanted on 459(burg??) and apprently when The San Ramon officer stopped them on Alcosta @ San Ramon rd they jumped him and fled. south into a nearby neighborhood.. All the suspects have been apprehended and all are from The Fairfield area...I'm glad they all stuck with it and hung in it till they got thier guys. All involved did a good job. I did hear a little "tone" in some Dublin officers voices as to the communication about getting these guys. San Ramon was pretty hot for these guys, understandably so...:)

Did this for 6 hours straight today (11:30 - 5:30), only heard Morse IDs and occasional short blips at beginning/ending of SVL PD transmissions. Heard no Med-9, no other traffic. Next time I am in area of ECR and Sunnyvale I will listen for Close Call captures...

aww cmon Ed it was not that bad, i was listening to Dublin PD the whole time as well as thier Tac 8 TG and San Ramon's comms. I thought they did a good job. I was in the area and believe me they had every damn corner for about 3 miles covered. officers posted at almost every street and corner in the area. Not JUST Dublin PD, but "I" units (invest) and plain clothes units from both San Ramon and Dublin and Alameda county. As well as Danville PD and Dublin's camp parks units...Hey at least Dublin didn't lose them, which seems to happen quite a bit when they are looking for bank robbery or other subjects who commit crimes and run. I have heard Dub PD lose many a fleeing subject..

The issue deals with San Ramon PD entering a house in Dublin before Dublin had a perimeter set up. This could have lead to a perp sneaking out the back. I don't know if the arrest is legal since it was Dublin's jurisdiction, but I'm sure someone will comment one way or the other. It probably would have been better to use San Ramon PD on the perimeter and let Dublin PD enter the house.

The arrest should be fine as the jurisdiction/"county line" stuff from movies is just that. I'm pretty sure that in California peace officers are empowered throughout the state. At least that was my understanding when I cared about such things... gah, fifteen years ago?!

gary <yahoogroups@...> wrote:The issue deals with San Ramon PD entering a house in Dublin before
Dublin had a perimeter set up. This could have lead to a perp sneaking
out the back. I don't know if the arrest is legal since it was Dublin's

Gary, you GOT to be kinding me.....of course it was legal, as another poster pointed out.....a California Peace officer can make an arrest ANYWHERE in the state. It sounded like an ego thing to me.

Remember the pursuit when SFPD chased the guy south on 101 over 380 and up 280 , thought he was involved in the 187 of their officer and they would NOT back off when CHP requested them to do. Understandable however, it was their officer who died.

Again, once a CP is setup "someone" needs to take overall command of a call. Since it was a Dublin Officer, maybe it should have been them

I invite the police officers on this list to chime in with their thoughts

Shooter is possibly known and associated with Willow Glen High School.
One RP is now saying that there is possibly a suspect hunkered down in
an adjacent backyard at 1012 Spencer.

Gray SUV stopped in front of residence, shooter and others exited
vehicle and began shooting, with a female driver departing and others
fleeing on foot after the shooting. Suspect vehicle is described as a
newer dark gray Lexus SUV.

Partial List of Responding and On Scene Units:

Yes it was about that, but It was not that bad, there were alot of PD surrounding the house in mention, granted some jurisdiction issues should have been brought up ahead of time but, in the heat of the moment, in defense of those San Ramon Pd, they were fiending to get these jokers who beat up one of thier own. But yes I am sure there will be some jurisdiction issues to hammer out tonight. But they got the bad guy and thats what counts right at that moment.

Evan, do you know if you can use the data management software to program the rig? I use that to program my VX5R, it's the only way I can do it. I like the VX5R but you are right about 6M though I did hear the 10 MHZ WWV and a nearby BBC transmission on the ducky, can you believe that? Do you know if they make a Data management software program that will run on Windows CE? I have a small braille notetaker that runs on that OS and it would sure be cool if I could program my VX5R from it and not have to alway be at home with the regular PC. Jim

Ed,

There already is a LE form of ICS, or SIMS, as it's more commonly known today. It's a lot harder to get many agencies to use it than it is in the fire service since fire almost always has multiple units and a contained scene. The police, even when they have multiple units, have a much more fluid and uncontained scene. It takes a commitment to follow the system and set up a unified command, something the police don't have much experience with and aren't very good at. I don't think it's as much ego as lack of the need to use SIMS on a daily basis like you find in the fire service.

Regards, Jim

Yeah, I recall some agency using something of the sorts Jim, but it, as you say is not often used. The ICS thing took time within the fire service to get as widespread as it is today. I can't remember hearing of a fire service NOT using it for a few years now.

Like I said, it would be a LE version since the operation is considerable different from a fire operation.

On another subject, seems law enforcement may have to adjust their pursuit polices with Sacramento politicians getting into the act. I am wondering, has anyone heard the CHP terminate pursuits much? Seems they rarely do and they may have to change. I noticed in the past several years, more and more agencies "seem" to terminate more pursuits .....OTOH, stats on the news indicate they are more pursuits year by year lately. Heard a figure of 7,171 pursuits in either 2004 or 2003.

You play Chess and Checkers on the same type of board. However -- they are not played the same. The CHP has a different view or way to look at how and when to chase someone. From just viewing pursuits on TV -- it would appear, more often that the local city Police or County Sheriff are the ones that seem to "Drive" a person into the ground. The CHP seems more "laid back". The CHP doesn't often try to force the driver into a wall, another car or an intersection -- as do the "locals' that feel that its "their beat" or turf and "By God, I'll get them to stop". Its a different game for the CHP. That's just how I see it. But then again - I think that if they hung horse thieves -- they should do the same for 10851 CVC.

yeah, you got a good point , but still , I don't hear the CHP calling off their units on pursuits like I do Sgts for some cities and counties.

Seems SFPD has a Felony only pursuit policy , but too have had tragic results from some pursuits.

Freeway only pursuits don't have the risk of T-bones crashes like inter-city pursuits do and freeways obviously are built to handle vehicles at higher speeds.

like so say chess and checkers on the same board.

I do NOT want too restrictive policys , the bad guys will REALLY start to run. They should have REAL stiff penalties for running , won't slow some of them down . but say a penalty of- for every minute you DON'T stop , the penalty goes up by $1000.00 and another year in jail...some may think twice.

Topic: 37939 Message: 37943

Though I imagine that this tangent is going to get flamed for being off-topic, I have a few thoughts to share. I think it was Ed who made the point that CHP seems to hang back in pursuits and not crowd the fleeing vehicle the way the local cops do. That's true, and consider this to explain the difference: The Highway Patrol has more individual and corporate experience and training with high-speed pursuits than does local law enforcement. It is what they do. They are professionals at patroling the highways where such pursuits occur.

This is similar to my observation and opinion that fire is as a whole better at Code 3 driving than most law enforcement agencies. Why? Again, I maintain that it is because they have much more experience and training in rolling code than do the cops. Granted, they are responding for different reasons, however I still maintain that fire has historically remained more calm and gotten far less excited about running with lights and sirens than local police or sheriff's agencies and thus is "better" (subject to definition... I mean "safer") at doing so. I also think that the heavy GVW of fire apparatus gives the drivers a greater sense of responsibility and awareness of the destructive potential of their vehicle.

And, as Forrest Gump said, "that's all I got to say about that."

CARLA is an open system, your thinking of either Cal-Net or Cactus which are both membership supported. Good call Paul, I think I forgot to include CARLA when this all started up.

but you should really be a member of carla system before we statrt
using there repeaters and I think memebrship is over $100.00 per year

Hey, I was referring to myself more than anything, as I had just posted moments before about Code 3 driving and yesterday about the powers of a peace officer. Perhaps tongue-in-cheek humor is contraindicated in this group. I meant only to acknowledge those who have expressed their dislike of the threads that go afield of the actual practice of scanning.

I know I may be re-hashing a statement that was already made but after talking to a 24S unit (San Jose CHP Sargent) about CHP's pursuit policy I did learn that one of the big reasons that CHP does NOT get involved in "city" pursuits, and may "hang back" is because they (CHP) are not aware of the individual department policies and by getting involved they may actually put other officers in danger.

<way2twohot@...> wrote:
>
> You play Chess and Checkers on the same type of board. However -- they are not played the same. The CHP has a different view or way to look at how and when to chase someone. From just viewing pursuits on TV -- it would appear, more often that the local city Police or County Sheriff are the ones that seem to "Drive" a person into the ground. The CHP seems more "laid back". The CHP doesn't often try to force the driver into a wall, another car or an intersection -- as do the "locals' that feel that its "their beat" or turf and "By God, I'll get them to stop". Its a different game for the CHP. That's just how I see it. But then again - I think that if they hung horse thieves -- they should do the same for 10851 CVC.

Okay, final update on this one. The train that struck the three
pedestrians is Union Pacific 5795 (General Electric AC4400CW-CTE),
which was headed southbound.

You can see a shot of this loco here:
http://www.railpictures.net/viewphoto.php?id=22287

As mentioned before, one subject is 10-55, one non-fatal, and the other
pedestrian apparently got scared and ran off.

From: Tim
Topic: 37959 Message: 37959

National Parks Service has an interesting case that started at about 2:45PM.

Details are somewhat sketchy, but apparently a Parks Police officer came across some suspicious individuals and an associated vehicle in the vicinity of the Presidio Golf Course, with other subjects possibly outstanding.

The vehicle contains some liquid containers, which the officer apparently has reason to think may be HAZMAT.

NPS Police have set up a perimeter, are requesting the NPS K-9, a CHP helo, and support from Presidio Fire as well as SFPD & SFFD.

The only thing I've heard about the exact location is that it's near the golf course, that there was a breach in a fence, and that they want the water dept people to come to the scene.

I'm guessing that the actual site is the one of the old Presidio communications station ('WVY') radio sites on Lone Hill. The abandoned 2 story bldg & antenna towers sit within a fenced compound, and has a smal water reservoir immediately adjacent to it. It sits just N of the Presidio Golf Course. I've poked around inside that compound myself.

This could be nothing, or it could be an attempt to poison the water supply...

I've been listening to the NPS GGNRA trunked system's 'ICS' channel (talk group 240), though it's been quite for a while now.

Hey Gordon,

I actually caught the loco number on CDF local and then decided to search it on railpictures.net. THis has been a long time favorite site of mine. I even have a few shots on the site, too! I have often done searches using engine numbers just to confirm type after doing some railfanning.

Cheers!

37964. San Jose Fire - Vehicle Into Structure

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-03-09 14:02:16 UTC
From: Craig Rose
Topic: 37964 Message: 37964

Just got out of the shower, turned on the scanner, and heard San Jose Fire working the following:

Unoccupied vehicle into a closed business. Vehicle had a brick on the floor to accelerate it into the building at which time it erupted into flames, but fire was limited to the vehicle and did not spread significantly into the structure, or paint cans stored in the business.

BASCOM IC

San Jose Command 3 - 154.115
San Jose Tac 5 - 155.880

Address unknown at this time. Sorry for the sketchy details.

-C-

37970. Sunnyvale - 2 10-55's??

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-03-09 20:06:02 UTC
From: Evan Platt
Topic: 37970 Message: 37970

Initial call came in as a 10-53 10-55 (suicide possible DOA?). Didn't bother with the address. RP refused to perform CPR.

Initial PD on scene advised 10-55 (DOA) - cancel FD. Quickly came back advising they have a 2nd DOA. CSI & Patrol Supervisor. Possible crime scene.

FD: 482.9625.

last i checked, 10-55 just simply meant 'dead' or 'dead body'. that, of course, sounds consistant with what one might find at a crime scene, especially prior to determination of COD.

37975. Possible HAZMAT Sickens Three SJPD

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-03-09 21:11:26 UTC
From: Craig Rose
Topic: 37975 Message: 37975

Another incident that I have only sketchy information on after walking in on it in progress.

Apparently three San Jose Police officers have been transported to the hospital after becoming sick from unidentified fumes at 585 South 6th Street, Apt. 9 at East Williams Street.

HIT 29 is now on scene requesting TRUCK COMPANY 3 respond for possible decon duty upon making access to the apartment to determine the source of the odor.

Staging is at 6th and Reed.

HIT 29
TRUCK COMPANY 3
ENGINE 3
MED 30

Working on San Jose Command 3 - 154.115

Topic: 37975 Message: 37976

Brief update:

HIT 29 is now HAZMAT GROUP
TRUCK 3 assuming IC
ENGINE 3 will be DECON GROUP

IC is establishing an evac plan for primary and secondary structures,
while an entry team is formed from the HAZMAT GROUP.

Union City working something on 40016 , wants UCFD as a long-term standby .....maybe on 8th street .

Also, just heard Alameda PD announce that Hayward PD was invoking " SNARE" for a 211 at Safeway on Foothill, perps left in a stolen Camry

I am guessing SNARE is like the code 666 or 777s in other counties , anybody hear SNARE used before ?

I've heard of snare before. My recollection is they notify surrounding
PD's. You call snare if you are pretty sure the bad guy got away and the
crime is a felony.

There should be a thread on this on bayscan, but geez, years ago.

I don't know about the airband freq (I had one but never heard anything on it). Here are some UHF they use regularly to talk with the station. You can hear them say "video is up" or "coming up on Loma" and "Sky 4 to Shadow Base" and "If I took the ramp, I would have been in that jam for the rest of my life."

I also list the output tones for us poor folks using radios with poor intermod rejection. KGO seems to use different tones.

Metro Traffic 450.0625
KNBR 450.2375 (never heard any traffic on this freq)
KCBS 450.5375 (repeater output but the freq below is not necessarily an input)
KCBS aircraft 455.5375 67.0 (very busy)
KCBS 450.0875 88.5
KCBS 450.6125 199.5

Yeah, I've heard KGO on 94.8, 110.9 and a couple of other tones.

Any idea why they do it? What are the different 'channels'?

KGO has multiple repeater sites, hence the multiple tones. At least this is true for 450.2125

In the dark ages before they went to traffic every 10 minutes, you would hear a bit more chatter on which repeater was being used. You would also hear some funny stories about flights over the beaches of Marin....

Just guessing, but maybe different sites? One may be north bay, one south bay? You might be in a good location and pick up both?

Or, maybe one's for radio comms, the other is audio from the broadcast feed to cue the remote talent?

37996. Anyone looking for a car radio console?

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-03-10 23:14:07 UTC
From: Evan Platt
Topic: 37996 Message: 37996

I have a radio / scanner center console I'd like to get rid of.. Not sure what I'd want in trade. The kind of geek toys people on this group collect - perhaps a GPS?

It's I believe made for the state of California for a state agency (CHP perhaps?). It'll hold at least 6 or 7 standard radios. It comes with a rail system. that fit perfect in my 01 Taurus - simply removed the standard center console, and with a little brute force, the 2 bolts lined up.

I've included some pictures -

http://www.espphotography.com/console/

And here's a picture when it was in use in the Taurus -

http://www.espphotography.com/carradiosetup.jpg

The top radio was HUGE, and to get it to fit with the special connector it needed on the back, it HAD to stick out like 4 inches. But most newer radios can mount flush. You can get faceplates anywhere.

Let me know your offer.

Thanks.

Evan

38001. Tar fire Redwood High School in Larkspur

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-03-11 01:48:56 UTC
From: inigo4688
Topic: 38001 Message: 38001

This is going to be in the Redwood High school east parking lot near Lucky Dr. and Doherty (?). A fully involved tar pot used for tarring the roof. Either on the roof of the high school or in the parking lot (conflicting report from FD and Twin Cities PD).

Units responding: Truck 17 Engine 15 Engine 16 Medic-Engine 14 Medic 40 Chief 15 Chief 16

Dispatched on Southern Area Fire "Control 6" - 46.50 Mhz PL 82.5 / MERA Tg 21616

All units have since changed to "Control 13" - 46.12 Mhz PL 82.5

Assigned Tactical BLUE - 46.08 Mhz PL 82.5

Dispatched about five ago and time now is 17:48. E14 M40 have been released and are enroute to a seizure victim.

bcn advises that KGO NewsTalk 810 radio station will no longer be broadcasting San Francisco 49ers games, after 18 years. instead, a four-year partnership with Susquehanna Radio has been announced on the 49ers Web site, providing the 49ers with three newstations, including KNBR and 1050 AM, and FM classic rock station 107.7 The Bone.

I think it would be great if they not only broadcast on FM but broadcast in
stereo with close on-field mic's and wireless mic's on some players.

OOOOH OHHH ME ME ME PICK ME!!! <RAISING HAND>

E23 E19 E29 E2 E5 T29 T2 USAR5 B1 B2 B29 Air 6 Hit 29

Mattos Drive cross of Piedmont Rd. 1 block away from Piedmont HS. Initially reported by the Vice Principal of Sierramont Middle School and yours truly as this fire was 3 blocks away from my construction site.

One fully involved structure with a 2nd structure exposed and started.

E23 arrived about 2:50 and immediately ordered up a 2nd alarm.

Move ups E8 to 2 T3 to 2 E30 to 23

I left the fire around 3:20 and it was mostly under control.

Units on scene near the north tower:

42.16 - CHP Violet

There's also Law Enforcement and Fire/EMS activity on the GGNRA trunking system. FD is setting up on Lime Point in case, well, the person jumps, and Coast Guard is on scene below the bridge.

Surprisingly this is the first one of these I've ever heard. BUMMER for the person...

Hi,
I am trying to program my Pro94 scanner with the GGNRA trunked system.
I have the following Frequencies
416.025
417.875
419.825
417.275
417.675
419.625
I have the choice of E2-hi for Motorola Type II or e2-UHF. does anyone know which one I should choose?
Thanks

Hiya. All you need for the freqs are the control channels:
416.025 -- North Site
417.275 -- South Site

These are UHF frequencies so choose the e2-UHF option. You'll want to
set each freq to MOT in addition to the bank type. Also, since it's
UHF you'll have to set the Base/Offset/Step Size. They are:

Custom Frequency Table

Base: 413.0000
Spacing: 380
Offset: 25 kHz

Check out the talkgroup info on
http://www.radioreference.com/modules.php?name=TRSDB&sid=349 .

Actually, they were KNIGHT from VFA-154 Black Knights, tailcode NG.
The two similar callsigns makes everything quite confusing.

I'm not sure if they were -31 flight or -21 flight. Air Traffic
Control referred to them as -21. Moffett called them -31. I didn't
listen to the pilots closely enough to figure it out.

Hey Sagar, wake up before 11am and go get some photos. ;-)

Morning Ed!

Up late again? ;^)

I heard this fire dispatched as a full first after multiple calls. I have a question for you. I heard the "2 out" reference as well, and I am just wondering what exactly that means. I heard it twice yesterday, and I just don't recall hearing that before.

Thanks!

2 out ....or 2+ 2 is the same as a RIT or RIC ....Rapid Intervention team or Rapid intervention Company.........used for fire fighter down calls...... the idea is , if 2 fire fighters go inside , they need 2 Outside ...just in case

last night E21 had their own supply line so they asked E31 to take " 2 out".

must have been pretty good working fire , under control was about an hour later.

NOTE> AMR involved in a crash right now on Monterey , think they said Tully.......into a pole , AMR crew is ok.

Thanks Ed! I knew it would be something straight forward like that. Indeed, that was a nasty fire from what I gathered. Heard at least two safety announcements - one for a bowing garage wall and another for potential collapse on the D side of the home. I was amazed how stubborn this one was.

Thanks again, ED...

Would not be suprising as it is the first fully nice sunny weekend.
usually brings people out of winter hibernation and more people to
parks and more outdoor activities as well as to the roads. Usually
the first nice couple of weekends of spring are busy..

What if I've found you now? Do I win? ;)

I've looked at APRS. Nice idea..

I've heard they're adding a feature so if you're at a HRO or swapmeet, and
your spouse / SO looks up your location, it will show you as being at work?

I'm not sure those transmit do they?

Anyone remember the cheezy movie Wedlock?
http://www.imdb.com/title/tt0103239/ .

Premise is a huge prison camp. Low number of guards. Each person wears a 'necklace' type device, and is paired to someone else in the camp. If you go more than <X> feet from your 'paired' person, your head explodes. Of course, our hero figures out who he's paired with - oh, I'm sorry, did I spoil the movie?

There would obviously be no movie if it were set to some 'device' on the grunds of the camp - i.e. if EVERYONE left the camp at once, EVERYONE would go kaboom. Imagine that device for someone on house arrest.. <grin>

The bracelet and phone "talk", so it seems there must be some sort of link. Here is what I got from Wired. Now it may be so weak that it isn't licensed, but if you had access to the system, you could get the FCC ID and look it up. Surely someone on the list is under house arrest?? ;-)
----
http://www.wired.com/news/technology/0,1282,17296,00.html
Currently, nearly 1,000 North Carolina offenders serving home-detention sentences are monitored with the standard monitoring system. An ankle bracelet worn by the lawbreaker is tracked by a transmitter connected to the telephone. A computer must call the phone number to activate the transmitter and check on him.

A similar scheme in "The Running Man":
http://www.angelfire.com/tx3/80schild/runningman1.html

This is from radio Ref.com dated March 12th
P-25 in Oakland, CA (Follow-up)
Posted on Saturday, March 12 @ 18:04:00 CST by blantonl
Submitted by: kb4cvn

Oakland's new radios pass test
City, regional agencies get green light to buy public-safety equipment

With a preliminary battery of tests this week in Arizona, the supplier of public-safety radio systems to Oakland, Richmond and the Bay Area Rapid Transit District (MA/COM) proved that its latest radios will be able to communicate with other manufacturers' radios, potentially saving the region millions of dollars.

Federal radio experts sent by the U.S. Department of Homeland Security had recommended Oakland not buy new radios manufactured by Lowell, Mass. -based M/A-COM unless the company showed its radios met the latest standards for interoperability.

As of Wednesday, they do. The test results remove the last barrier to Oakland's planned purchase of about 2,000 hand held radios for at least $8 million to replace the decade-old radios now carried by city police, firefighters, public works engineers and other employees.

For police, the radios are their single most used piece of personal equipment and nearly the most expensive. Each new handset will cost the city about $2,700, not including likely future software upgrades costing $1,000 to $1,500 apiece. In essence, what city workers would get are highly rugged, handheld computers reliant on software to gain access to a radio network, compress and send messages.

Until recently, makers of almost all public-safety radios made the software and the radio signature of the transmissions proprietary and so unable to communicate with other makers' radios. But after the Sept. 11, 2001, terrorist attacks, there has been a national drive to drop those barriers so first responders in different cities and counties can talk in a disaster as well as routine emergencies.

The East Bay is moving in that direction, toward a common, regional radio network shared by at least Alameda and Contra Costa counties and all of their cities, now operating with a patchwork of radio systems that largely cannot communicate with one another without delay.

One way of getting different radios to communicate is to apply a set of technical standards known as Project 25, or P25 for short.

Oakland's supplier, M/A-COM, had made other radios in other frequency bands meet the P25 standards but until recently had not proved the same thing for radios operating at 800 MHz, the frequency used by BART, Alameda County, Oakland, San Francisco, Richmond and smaller cities that share their radio networks. Without proven interoperability, federal radio experts advised Oakland against the purchase. Oakland officials insisted on a test.

M/A-COM quickly shipped radios to Arizona, where Phoenix, Mesa and other cities are joined in a massive common radio network spanning 2,000 square miles. Once programmed onto the network, M/A-COM's radios shared messages and other alerting functions with P25 radios made by Motorola and E.F. Johnson.

"It worked fine," said Joe Noce, Mesa project manager for the Phoenix-Mesa network. "It's not vaporware, they do have a functioning radio."

John Powell, head of the Homeland Security Department's expert panel for most of California, applauded M/A-COM and said the results cleared up any doubts. His panel is rewriting its recommendations to Oakland, advising the city to require the new P25 features in its radios.

"They've done a yeoman's job in getting it out there," he said.

Oakland communications officials could not be reached Thursday, but the tests are good news for the city, which by some estimates has $30 million invested in radio equipment that M/A-COM maintains. Had the radios not worked out, Oakland would have been faced with fast-aging radios and the prospect of paying a larger share of the cost for a new network of transmission towers and repeaters.

"The city of Oakland has invested a lot of money in infrastructure, and they can buy radios for that infrastructure now and still be ready for a regional system in the future," said Greg Farmer, product manager for M/A-COM.

Battalion Chief 3 made a 2nd alarm on arrival at 560 Hurlingame Avenue in Redwood City. Staging at Halsey at Hurlingame, call came in as a car fire in a garage with a female burn victim.

First Alarm Units:
Battalion 3, Engines 5, 9, and 11, and Truck 9

Second Alarm Units:
Battalions 1 and 2, Engines 10, 3, and 77, Truck 1, and Engine 12 will be bringing Breathing Support 9 to the scene.

Fireground is Control 5 - 156.105 and can usually be monitored on FireDispatch.com

Jeff

As noted in the article, there is discussion of a regional system between Oakland, Alameda County, and Contra Costa County. By procuring P25 compliant radios now, Oakland would not have to replace their sets when such a system were to come into being (say 3-4 years).

Buying M/A-COM P25 radios means they can use them on the existing EDACS infrastructure until a digital system is up.

I assume they would patch them all together then with each agency keeping their
proprietary trunking systems ? ALCO has a Motorola
system, Richmond, BART and OAK have EDACS trunking.

Or do the new EDACS radios have capability for a software upgrade to
be able to talk on a Motorola digital trunking system. (highly unlikely).

Since EDACS P25 digital trunking (either conventional or "open sky") and
Motorola P25 astro-digital trunking cannot
talk to each other (except on simplex in non-trunk mode) , I'm having a
difficult time trying to make sense of this article.

So what if they are P25 compliant, if the underlying trunking systems are
incompatible, they still can't talk to each other except
on simplex or a patch.

Doesn't sound like it solves the problem at all, unless they plan on EDACS
for the new region-wide system.

The EDACS system is now 13 years old; they are buying replacement portables now. They have requirements for coverage outside of their current system footprint (other side of the Caldecott, for example). Obtaining radios that meet an open standard like P-25 will allow them to work in a regional system.

Those are the *current* platforms, yes.

> Or do the new EDACS radios have capability for a software upgrade to
> be able to talk on a Motorola digital trunking system. (highly unlikely).

Not an upgrade - the radios will do P25 trunking, as demonstrated last
week in the Mesa Arizona (Motorola-supplied) P25 testbed trunking system.

> Since EDACS P25 digital trunking (either conventional or "open sky") and
> Motorola P25 astro-digital trunking cannot

EDACS is not P25 compliant trunking. Astro-Digital is not P25 compliant
trunking (and Motorola has announced intent to discontinue Astro-Digital
Spectras as of the end of this year).

> So what if they are P25 compliant, if the underlying trunking systems are
> incompatible, they still can't talk to each other except
> on simplex or a patch.

What is being proposed is a regional P25 Trunking system. Open Sky
would allow the legacy Oakland system to patch groups between systems.
P25 trunking capability allows Oakland units to work outside of the
Oakland footprint. For Alameda, it is an upgrade and expansion; for
Contra Costa, it means finally moving to a common platform with the rest
of the East Bay.

Where is the down side?

Yes. That was what the tests done Tuesday in Mesa showed - M/A-COM 7100 series portables operating in the P25 trunking environment, communicating with Motorola, EFJ, and other vendor radios - Trunked, not simplex.

They work on both EDACS and P25. Motorola "SMARTNET" is not P25.
Motorola happens to be the first manufacturer of P25 trunked
infrastructure. Other companies make P25 repeaters that can be added to
the infrastructure. I suspect that with a dual platform portable,
M/A-COM P25 trunking infrastructure may not be far behind.

OK, makes more sense.

No down side. Just trying to understand the reasoning.

I was just curious where my tax $$$ were going to go, since OAK made (in my opinion) a BONEHEAD decision to
go with MaCom in the first place after the Oakland fire storm, and be incompatible with surrounding jurisdictions.

So this allows them to use current infrastructure until a regional P25 compliant system is turned up with non-proprietary trunking.

So the next question is...

Is this proposed regional system a candidate for the new re-farmed 800mhz spectrum after NexTel moves, or the proposed 700mhz spectrum ?

Yes.

Contra Costa County drew the short stick in the original 1991 band plan. If the Northern CA Region can "repack" the band (now that we have 15 years of practical experience under our belts), the hope is to create additional channels that the regional system could use in 806 MHz. (Any such new plan would implement with rebanding in about 18-24 months.) If not enough channels can be carved out, then the 700 MHz spectrum would be tapped. As it is, 700 MHz may end up adding channels to the system (and others in the area).

Doesn't 700Mhz require HDTV to replace the current system?

Are they going to call those on the system the 700 club?

For the moment, CHP isn't going anywhere.

CoCo County has been looking at the possibility of a 220 MHz system for
public works.

Yeah, because it doesn't use the digital IMBE vocoder

>Astro-Digital is not P25 compliant trunking...

Compliant and *compatible* are different. Most ASTRO systems use the IMBE vocoder, as in the P-25 standards, but the P-25 standard mainly addresses the vocoder type. P-25 is not a trunking standard, it is a digital voice/common air interface standard. P-25 does address the trunking related issues for the IMBE format. Also note that there are non-trunking P-25 radios available, so some users can have conventional digital-voice radio systems.

It will be interesting to see how the East Bay accomplishes this interoperability with the different system vendors.

Hopefully, the proprietary MA/COM ProVoice will not enter the picture.

This fire sounds like it's in a strip of at least 3 businesses, one of them is a seafood restaurant, which I think is South City Seafood. They are having problems accessing the fire and companies are going to breach a wall in the rear of the structure to try to gain access to it. There is report of heavy smoke conditions from at least one of the businesses.

I won't post any further updates unless the situation warrants.

Jeff

Hey Jeff , they original sent T51 on the 2nd , but I hear them now talking to T34. did you catch why they switched trucks on the 2nd ?

also , did you happen by chance to hear which SFFD units were sent to the overturned tanker incident on Gateway/Grand. I heard the IC say they were releasing San Francisco about 45 minutes ago. I am guessing they may have been airport units with foam , but didn't hear the call

I don't know why they switched 2nd alarm trucks at the fire, I've heard them say in the past that Engine 51 and Truck 51 were cross-staffed with a single crew at times, perhaps that's why.

The fire is now under control at 1111 ECR and units are being released.

I didn't hear too much about the overturned tanker incident, sorry. A foam unit from the airport is a good guess though. I'm surprised there isn't a dedicated foam unit within San Mateo County. I know of a few departments back east that have outfitted old reserve engines as foam units. Maybe they would if the airport units weren't so close.

I thought about them cross staffing it once I looked at the fact that E51 went. that would mean San Bruno only runs 6 guys and a Chief per shift :-(thats weak , but I think you may have the right answer

I will check with a few guys I know within the SFFD about the call , I do remember hearing that the Airport would NOT sent units outside the airport with foam , but this is so close maybe they did.

thanks

ED

Topic: 38109 Message: 38109

Oakland's new radios pass test
City, regional agencies get green light to buy public-safety equipment

With a preliminary battery of tests this week in Arizona, the supplier of public-safety radio systems to Oakland, Richmond and the Bay Area Rapid Transit District (MA/COM) proved that its latest radios will be able to communicate with other manufacturers' radios, potentially saving the region millions of dollars.
Federal radio experts sent by the U.S. Department of Homeland Security had recommended Oakland not buy new radios manufactured by Lowell, Mass. -based M/A-COM unless the company showed its radios met the latest standards for interoperability.

As of Wednesday, they do. The test results remove the last barrier to Oakland's planned purchase of about 2,000 hand held radios for at least $8 million to replace the decade-old radios now carried by city police, firefighters, public works engineers and other employees.

For police, the radios are their single most used piece of personal equipment and nearly the most expensive. Each new handset will cost the city about $2,700, not including likely future software upgrades costing $1,000 to $1,500 apiece. In essence, what city workers would get are highly rugged, handheld computers reliant on software to gain access to a radio network, compress and send messages.

Until recently, makers of almost all public-safety radios made the software and the radio signature of the transmissions proprietary and so unable to communicate with other makers' radios. But after the Sept. 11, 2001, terrorist attacks, there has been a national drive to drop those barriers so first responders in different cities and counties can talk in a disaster as well as routine emergencies.

The East Bay is moving in that direction, toward a common, regional radio network shared by at least Alameda and Contra Costa counties and all of their cities, now operating with a patchwork of radio systems that largely cannot communicate with one another without delay.

One way of getting different radios to communicate is to apply a set of technical standards known as Project 25, or P25 for short.

Oakland's supplier, M/A-COM, had made other radios in other frequency bands meet the P25 standards but until recently had not proved the same thing for radios operating at 800 MHz, the frequency used by BART, Alameda County, Oakland, San Francisco, Richmond and smaller cities that share their radio networks. Without proven interoperability, federal radio experts advised Oakland against the purchase. Oakland officials insisted on a test.

M/A-COM quickly shipped radios to Arizona, where Phoenix, Mesa and other cities are joined in a massive common radio network spanning 2,000 square miles. Once programmed onto the network, M/A-COM's radios shared messages and other alerting functions with P25 radios made by Motorola and E.F. Johnson.

"It worked fine," said Joe Noce, Mesa project manager for the Phoenix-Mesa network. "It's not vaporware, they do have a functioning radio."

John Powell, head of the Homeland Security Department's expert panel for most of California, applauded M/A-COM and said the results cleared up any doubts. His panel is rewriting its recommendations to Oakland, advising the city to require the new P25 features in its radios.

"They've done a yeoman's job in getting it out there," he said.

Oakland communications officials could not be reached Thursday, but the tests are good news for the city, which by some estimates has $30 million invested in radio equipment that M/A-COM maintains. Had the radios not worked out, Oakland would have been faced with fast-aging radios and the prospect of paying a larger share of the cost for a new network of transmission towers and repeaters.

"The city of Oakland has invested a lot of money in infrastructure, and they can buy radios for that infrastructure now and still be ready for a regional system in the future," said Greg Farmer, product manager for M/A-COM.

When are the 700MHZ UHF stations supposed to go somewhere else and where will that be? When is TV going all digital? I can't imagine either of these things happening soon like in the next five or even ten years for a number of reasons not the least of which is market pressures, and new equipment having to come online. Jim

one reason is that nice big TV set you just bought... worthless because now all stations are digital? No, analog channels will be around for quite some time. Imagine all the angry TV set owners with worthless sets.

I asked Ralph Haller (former chief of the private land radio section in the FCC) at the IWCE last year regarding the new 700 MHz band, his answer is nothing is going to happen soon. Ralph still thinks it is going to be a number of years before the TV broadcasters vacate the 700 MHz band. Although retired from the FCC, Ralph Haller now has a private practice in freq coordination and is a frequent presenter at IWCE in Las Vegas.

The original date (set by the FCC in response to a mandate established
in 1996 by Congress) was in 2006 or when a market penetration threshold
is reached. The broadcasters have played the market penetration factor
to delay the date to an uncertain one. There is pressure building in
Congress to make it a date certain.

Stations in 60-69 would relocate to channels lower in the spectrum.

Do you want to hear what the digital signal sounds like, or do you want
to hear decoded p25 audio.

This is some p25 I decoded, but used a microphone so the quality isn't
so hot.

Hi Gary, well, I must be missing something, but all I heard on those two links was just digital information, not actual voices. I am under the impression that some digital radios give you a replication of the senders voice but it sounds more like my speech output synthesizer then a human voice. I am looking for actual voice traffic like you provided on your link. Thanks, Jim

From: jim gammon
Topic: 38113 Message: 38125

Thanks Gary. I was looking for a voice audio sample. Even with the planes
in the background and the small speaker the voice was clearer then I thought
it would be. Now, if they'd only make a blind user-friendly accessible
digital scanner!
Sigh!!

Thanks much Gary, that is exactly what I was looking for. I guess the 120 cycle hum was from the scanner power supply not PL, right? Also, what were the control channel bursts in the medic file? Were they data or just infrequent control channel sounds coming through. The audio does seem to vary from one ER to another. Was the warble in the PD siren from the sampling rate of 24K or does it sound that way when you are listening live? Thanks, Jim

> or a cluster waiting to happen?

For the dispatcher, it depends which type of console they used pre-trunked radio. Once you go trunked you'll generally be using the Motorola Centracom Console. If it's new to them it will take some time to get used to, and judging how dispatchers are it surely will involve a learning curve.

For field units it's again the same. You could possibly be using a radio which is capable of simply being upgraded to support the trunking format, or it uses a user interface similar in nature. From my experience and involvements in transitions general users such as police and fire take a bit to get acquainted with the radio (because they're being made more sophisticated each day), police especially. There's also the problem with having to wait when you key-up. When you go trunking you are introduced to a talk-permit tone which basically says go ahead and speak. It's not like conventional where you press the PTT and *immediately* start talking. This is usually the biggest thing to learn....to be patient. Thousands and thousands of other public safety individuals have learned it so folks in your department can too (trust me, someone will gripe!).

> - do the channels/talkgroups used get assigned by the dispatcher or
> are they standardized within each dept?

Each trunked system has a database which is configured by someone in the telecom or wireless dept, or whomever handles your radios normally. If you don't have one the vendor will train. It probably will not be a dispatcher. Consoles aren't equipped for that anyway; apples and oranges.

Before assigning talkgroups you need to sit down and think of what types of "channels" you'll need. Do you need one Dispatch channel or do you want to separate dispatch into areas. How many TACs? Will you have a tac channel and a command channel? Make sure you have talkgroups which are standard in EVERY radio. Use them for mutual aid, or whatever you designate them, so that no matter who becomes a user on the system everyone still has the ability to talk each other regardless of their responsibility. The nice thing about trunking is you can increase your number of channels way more than what was

available with conventional radio. It allows for a lot more organization. Just make sure to not assign too many. You won't run into overloading the system, it's just harder to maintain and manage.

Try to acquire some conventional channels, possibly repeated channels, to have in the same radio used for the trunked system. Some day you WILL need them. Trunking is incredibly reliable, regardless of what you read or will hear (and that's another story), but it's ALWAYS good to have a couple conventional simplex or repeated channels. And make sure to include the ICALL/ITAC conventional channels for your band!

> - If there are more channels available, how do people know which
> channel the IC is on? How do units keep track of all the extra
> channels?

Pre-planning. Or, when you dispatch a call have the dispatcher announce the call as being assigned Command 1, Tac 1. Once things get moving they can announce any additional channels over the command channel (by the IC or whomever). MANY ways to accomplish this.

> - are there "right" and "wrong" strategies for implementing
> talkgroups?

Of course. You don't want to over due it but still plan for expansion. You don't want to create 15 training channels or five admin channels when one of each should do fine. Create channels you WILL use, and then a few for future use. I don't know anything about your department or area so I can't really say what would work best. Just remember to have all the heads sit down and develop a spreadsheet for each of their needs. The spreadsheet should be set up like it would be in a radio. You'll have zones (groups) and under those zones you'll have your individual channels (this depends on what type of radios you use (ie., display or non-display)).

> - Other than having two radios, what kinds of strategies are used to
> communicate with mutual aid units that are not on a trunked system?

When the system is built-out it's nice to make sure the dispatch center, since it will get upgraded, will have the ability to patch conventional channels to talkgroups on the system. It's not as trivial as most systems make it seem. It is when you don't plan to do it before you need it. With a trunked system, permitted you have the funds, you can patch almost anything into it.

From experience, your best route is for a dual radio setup (eg., your trunked radio and a VHF radio) in your rig in addition to both portables. Just have one or the other.

> If anyone has the time (and patience) to detail an example of how a
> worse-than-normal emergency (say, a large structure fire) might work
> in the context of radio transmission and who uses/scans which
> talkgroups, I would be grateful. Or, if you can point me to websites

> that discuss some of the aspects of implementing and using a trunked
> radio system, that would also be great. Thanks for reading.

My feeling is the last thing you want to do in an emergency situation is be scanning. It takes too much concentration to handle events on-scene and think, hey, who was that talking and which talkgroup were they on? I could draw up an example but each department is different. Email me privately if you would want to go into it more.

I touched these questions lightly; there are a lot more details which need to be considered. Just a heads up.

The medic wav is 24kbps sample rate, 16 bit mono mp3. You have a good ear, as that is 120Hz audible in the recording. After I notched it out, I see some energy at 114Hz, but I can't say for sure that is 114.8 PL. It seems the only way PL would make sense was if there was a conventional radio in the signal path, i.e. a radio link. About 27 seconds into it, there is a funny tone with the strongest energy at about 247 hz. Now you are good, but I suspect not that good. It just barely shows up in the sound editor. At 56 seconds there is a loud beep at 1440Hz. I have no clue how that is used, but I guess that is the tone you hear.

I'm pretty sure the warble in the siren is due to the digital encoding. About 2 minutes 38 seconds into the chase, the scanner loses synchronization and it sounds like the scanner falls out of decode mode and into a normal mode, which is why you hear the digital signal

I did some encoder tests using simple signals (sine waves, multiple sine waves, sine waves with white noise) and found that the GSM encoder seemed to do a better job versus mp3. Also, the 24 kbps sample rate is a bit overkill for scanner audio. There isn't much energy past 4Khz in this particular wave file, so the data rate could be cut in half.

Generally when I record on the PC, I do it in PCM at maybe a 16Khz sample rate, but often at 11025hz. The files are bigger with PCM, but the low data rate makes up for it somewhat . I could go into the rest of the flow, but this is getting a bit off topic.

Better location Sunnyvale & Maude - 155 Maude. It's a deli.

BC has requested all incoming units to code 2. Sounds like this will be nothing. No further updates unless they get a working fire.

38138. Off-Topic Request: Brainstorming for school web page...

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-03-15 22:40:20 UTC
From: Robert Griffith
Topic: 38137 Message: 38138

Hi Gang!

I hope it's okay to do one off-topic post as I've been a member here for years. :)

It's been BUSY over here... I was asked by a local elementary school to build them a web page. This is a VERY common request as they want to have an online web presence but they have no idea how to do it, what they want, where it will sit, etc. I also have to do this on a voluntary basis because my job is already so packed.

ANYWAY... I started thinking that I should come up with a template of sorts. A list of common elements that most school web pages would (or should) share. I could then build one solid, cool web page and then use it as a template for all of the others (only having to change the color, logo's, etc. as needed).

So I am writing to ask for your help in coming up with ideas. I can look at it from an educators perspective.. but I only taught high school. I would like ideas about what would YOU want to see on your childs school web site... or your school web site if you are "chronologically challenged". As a teacher, parent, student, community leader, etc... what should be on a school web page.

What I have come up with so far is below:

Common Components of a School Web Page:

Administration: Names, phone numbers, email addresses, and photo's of Admin / Office Staff
Faculty / Teachers: Name, extension, room number, email address, photo of teachers and faculty members.
Students: Students of the Month, other students in the news -- links to student grades or progress reports?
About the School: Mission Statement, location, driving directions, school population, online test data and statistics (AYP), school history.
Calendar: School staff can update and add events -- could be an "Upcoming Events" column that links to a full month-view of the calendar page.
News: A simple headline or two where the principal (or secretary) could post bulletins or important notices.
Newsletter: A regular (weekly, biweekly, monthly) newsletter that could be changed by entering data in forms -- could even be a link to a PDF the secretary builds.
Search: Kid-friendly search boxes (Yahooligans, AskJeeves Kids, for example).

Learning Links: Educational, kid-friendly web sites around the web (i.e homework helpers) -- could be managed by check-boxes in an admin window (by school staff) or populated by reading a file out on the MAIN server in another web location... That option would allow every school using the "software" to have the most current links.
Lunch Schedule: This might fit somewhere else -- the lunch lady could share upcoming lunch menus, info about nutrition, much lunch cards cost, etc.
Support This School: Links to "boxtops for education", "Campbells Soup Wrappers", the SCRIP program you can get from grocery stores, "Donate a Book"... stuff like that.
Scrapbook / Gallery: Pictures of students, teachers, the campus, classrooms, scans of student work, etc. Optionally could include video's & clips of performances, plays, etc.
Fun & Games: As the name implies, but managed by the same method as "Learning Links" -- schools that prefer not to have this section can turn it off in the "Admin panel".

Thanks,

Robert

BCN advises that a Petaluma man was arrested Tuesday after he drove an ex-police car through a police department pedestrian crosswalk sting, sounding the vehicle's siren to clear an undercover officer from the crosswalk.

Petaluma Police Department authorities say Mark S. Scott of Petaluma was arrested Tuesday in Petaluma for impersonating a police officer. The former police vehicle used by Scott was still equipped with spotlights and a prisoner cage, said police. The vehicle was purchased at an auction and officers said they did not know what police agency originally owned the vehicle.

The arrest occurred during one of two pedestrian crosswalk stings on E. Washington Street at Baylis and Edith streets Tuesday.

This link has good Las Vegas info. Click on the appropriate tab at the bottom of the link page. There is one agency, Las Vegas Metro PD, which handles city of LV and Clark County areas combined. (LV strip is part city, part county.)

From: Mike McRoberts
Topic: 38137 Message: 38162

I guess everyone has heard via the media most of the released details.
I would've sent a quick heads-up message on this yesterday but they
yanked me out to the field to help handle calls since all of the
Saratoga deputies were tied up on the 187.

Apparently our PIO is meeting with many of the news agencies out on
Fieldstone today for interviews.

I don't see a contact address for that list, but I just finished
updating my Nellis list and there are a few mistakes on that list:

Nellis Departure changed to 385.4
pmsv metro changed 323.9

317.525 & 343.0: Perhaps 343.0 has been replaced by 317.525. Many of the
instrument routes still contain 343.0, so I would still scan 343.0

From the current flip:

Nellis:
COMMUNICATIONS - SFA PTD - 139.3 372.2 REMARKS: Unrel 085?-155? byd 35
NM at FL 200, 315?-005? byd 40 NM at FL 200, 230?-290? byd 55 NM at FL 200.

I heard the media report last night. McCandless is certainly a big time
person in the south bay, right up there with the Carl Berg.

Reach 3 enroute with a 25 minute ETA as of 2003. This call was dispatched
at 1921.

No further updates unless warrented.

Wow... REACH 3 had to cancel (no reason given). AMR still enroute Code 3, 5 minute ETA. Mediflight enroute out of Modesto.

2031 hrs - we're now over an hour into this call.

Ok, last update unless something drastically changes.

AMR arrived 2042.

2050: AirMed has a 13 minute ETA. Ground ambulance says they definitely
need to be airlifted.

I hope I don't need to update this anymore...

Evan

Special Events

NERT City Wide Drill
Saturday April 23, 2005
8:30 am - 12:15 pm
Marina Middle School
Bay Street @ Webster
It is time to refresh your NERT skills at the Anual City Wide Drill
Please bring your helmet, vest, gloves, pencil, paper and a friend!
This event is open to the public

NERT Ham Cram
Saturday April 16, 2005
8:30 am - 4:00 pm
SFFD Division of Training
2310 Folsom @ 19th Street
enter on19th Street for parking
Bring $20 in cash for license
RSVP to jacklevich@...
This test will get you a HAM Radio license from the FCC good for 10 years. Every NERT team should encourage their members to become licensed HAMs to supplement that team's communication ability.

NERT Coordinator College
Saturday March 12, 2005
8:30 am - 12 noon
St. Teresa's Church Hall
19th Street @ Connecticut on Potrero Hill
Coordinators refresh your skills; NERT's become coordinators or assist your neighborhood's leadership team

NERT is in the St. Paddy's Day Parade
Sunday March 13, 2005
We are #95. Meet by 11:30 am on 2nd Street between Bryant and Branan.
NERT is in the parade so you can "Be an Irish NERT for a day". Bring your helmet, vest, and green sweater!

I just caught the tail-end of a Golden Gate Comm Center transmission which referred to shutting down a freeway due to a sniper suspected of being on the roof of a nearby apartment building.

I'm scanning the CHP dispatch freqs for Marin, Alameda COunty, Oakland, San Mateo & San Jose now but haven't caught anything related to the above yet.

From: gary
Topic: 21996 Message: 38188

I was checking freqofnature.com's list and didn't see blue under Golden Gate, but found it later at the top of the page. As far as I can tell now, they have a car with two suspects, unless I'm on the wrong event. [If not, Casandra is going to have a not so good night....] http://www.freqofnature.com/frequencies/ca/chp.html

Right, the BLUE is a statewide secondary and does not "belong" to any particular division.

You know, in 15+ years of scanning I've never heard anything on the supposed LoJack frequency.Has anybody else? I've even tried keying up on it (God bless test licenses) in a LoJack-equipped patrol car and didn't get any blinky lights. Isn't it a narrowband FM signal? I guess I should have counted the training gizmo with which I was playing at Christmas.

http://www.ostgate.com/bugfrqmfr.html says:

173.075 - LOJACK Auto tracking system beacon (200ms burst every second)
(This is the tracking device remotely activated via FM Sub Carrier)

I would have hoped it wouldn't just be a carrier activating it. Some sort
of data burst.

Actually, I'm getting the data burst about every 3 minutes. I just got
one at 11:06. But I thought they had a powerful transmitter on Mt. Tam,
i.e. you don't only get signals from the auto.

I also think we only got lojack running about 5 years ago locally. They
had it in socal longer.

That's an interesting tidbit. There does have to be some data to give the ID of the activated unit in the 10851 vehicle... I still expected the Doppler LEDs to light even if no vehicle ID was displayed. Hmph. Oh well. I'm surprised LoJack is still considered a viable technology with the proliferation of telematics (like OnStar). I guess such technologies are still lacking in the absence of cellular network infrastructure to pick up and relay the vehicle location. Satellite-based technologies such as the QualComm units used by commercial shipping companies still need a view of the sky to tell somebody its location. So I guess nothing is perfect. A combination LoJack/OnStar/QualComm would be a pretty good solution. ;-)

They have 300 watt sites all over the area. Marin, Palo Alto, Walnut
Creek, etc. Just do a FCC search on the frequency in California.
Licenses come back to LA for some reason.

So if it's a 200ms burst every second, I assume I'm just hearing one of
the 300 watt sites. Maybe they ping the patrol cars periodically to test
the system.

The advantage to lojack is you just pay for the hardware once and that is that. [Unless things have changed since 4 years ago when I looked into this.] On-Star and Teleaid require a subscription service of about $200 to $250 per year. So there is some price break point where lojack makes more sense.

Aren't the 300W mountaintop sites used to remotely activate the units in the vehicles as well as give the general vicinity of the stolen vehicle? In Pasadena Dispatch would broadcast word of activations picked up at the east or west tower. I guess units were supposed to be on the lookout in the appropriate area based on that info.

Interesting listening. Thanks for posting that, Robert. My parrot enjoyed it too. I'm not sure if it was the EIP tone or the squelch tail, but he started clucking along with the pursuit. Now's he still doing it. :-p

From: gary
Topic: 2153 Message: 38204

Fire up 173.075 and see if you get a ping. [Obviously you need to set your squelch carefully since the signal may be weak.] Reading the lojack website, you are correct that the 300W transmitters can be used to turn on the lojack in a car, but this doesn't have to be the only function of the transmitters. I took a quick look at the patent, and it seems they do a bit more than just turn on the transmitter. They can also determine how often the transmitter goes off (repetition rate). There is a random time delay between bursts to allow for multiple transmitters. Pretty much they ripped off bits of the ethernet protocol.

Reading patent 4,818,998 should get you started. www.uspto.gov
The signal is FSK. Mark/space frequencies 1200 and 1800.That patent even spells out the MX-Com chip used. If you really want to goof with it, download the demo version of skysweeper pro. The demo version can decode up to 1 minute of PCM audio sampled at 11025Hz.

http://www.skysweep.com/skysweep.html

I've decoded DGPS beacons, wefax and other stuff just using the demo mode.

38205. Re: [bayscan] Off-Topic Request: Brainstorming for school web page...

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-03-18 11:49:08 UTC
From: Leo G. Divinagracia III
Topic: 38137 Message: 38205

robert,

quick tip, dont reinvent the wheel.

steal... er,... borrow what's there already. ;)

anyways, i work for a university and we had gone through this a few years of standardizing every dept's site to follow a common theme.

also, went as far as going through a seminar on user interface and we studied web site for university for common things that a visitor would like. and FAST...

that was the key. you know, if you cant find it within a few seconds, most users will... well... bail.

these day, the biggest thing we are facing is making sure the website complies with section 508 of the Americans with Disabilities ACt (ADA).

i suggest if your school is getting some sort of public funding, make sure you build your site from the ground up as sec 508 COMPLIANT as possible.

heck even if it is a total private funding, certain SEC 508 requirements are just a common thing these days...

one tip: MAKE SURE EMAIL ADDRESS CANT BE _HARVESTED_ by web crawlers, people, etc!!!!!!!!!!!!!!!!!! if you have to, pay someone to make the page with email address to be dynamic!

38208. Re: [bayscan] lojack

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-03-18 16:25:26 UTC
From: Gordon Arnold
Topic: 2153 Message: 38208

Thanks for the info and tip to the Patent & Trademark Office, Gary. That's another good website I picked up from this group. Takes me back to 6th grade when I won a "What is it?" contest at my school library by looking up the patent number stamped in the side. Of course, that required the use of microfiche at the public library, but the concept is the same. ;-)

gary <yahoogroups@...> wrote:Fire up 173.075 and see if you get a ping. [Obviously you need to set
your squelch carefully since the signal may be weak.] Reading the lojack
website, you are correct that the 300W transmitters can be used to turn
on the lojack in a car, but this doesn't have to be the only function of
the transmitters. I took a quick look at the patent, and it seems they
do a bit more than just turn on the transmitter. They can also determine
how often the transmitter goes off (repetition rate). There is a random
time delay between bursts to allow for multiple transmitters. Pretty
much they ripped off bits of the ethernet protocol.

Reading patent 4,818,998 should get you started. www.uspto.gov
The signal is FSK. Mark/space frequencies 1200 and 1800.That patent even
spells out the MX-Com chip used. If you really want to goof with it,
download the demo version of skysweeper pro. The demo version can decode
up to 1 minute of PCM audio sampled at 11025Hz.

http://www.skysweep.com/skysweep.html

I've decoded DGPS beacons, wefax and other stuff just using the demo mode.

Gordon Arnold wrote:
> Aren't the 300W mountaintop sites used to remotely activate the units in the vehicles as well as give the general vicinity of the stolen vehicle? In Pasadena Dispatch would broadcast word of activations picked up at the east or west tower. I guess units were supposed to be on the lookout in the appropriate area based on that info.

From: Gordon Arnold
Topic: 38210 Message: 38210

Which CHP office covers the inland part of 17, say from 280 to the summit? On a 911 call regarding an incident at SR9 & SR17 the calltaker told me that should go to the Monterey callcenter, so I started listening to the GREEN. It's fairly weak even on my lowband mobile radio, which inclines me to believe that channel is not used by patrol units in this area. Is that beat perhaps covered by RWC (91) or SJ (24) units?

M'goi sai.

38213. Mobile trunking scanner recommendation?

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-03-19 03:51:16 UTC
From: Gordon Arnold
Topic: 38213 Message: 38213

I've decided its time to get a trunking scanner. I've decided a mobile scanner is indicated since in Mountain View and San Jose I don't live or work in areas covered by trunked systems but I do travel to visit friends residing in areas covered by the Marin, San Francisco, and Alameda County trunked systems.

That being said, I've identified two possibilities, the Uniden BC-796D (http://www.uniden.com/productpop/00_productpop.cfm?prd_code=BC796D) and the Radio Shack PRO-2096 (http://www.radioshack.com/product.asp?cookie_test=1&catalog_name=CTLG&product_id=20-496). I would like to dash-mount the radio in place of the little pocket between my broadcast radio and air handling controls. I've come up with the following pros and cons.

Bearcat BC-796D
Pro: LTR trunking
Con: Large size

Radio Shack PRO-2096
Pro: Designed for in-dash mounting
Con: No LTR trunking; Stupid iPod white color.

I've only ever encountered LTR trunking in SMR systems so I'm not too worried about not having it for public safety listening. Are LTR systems a factor around the Bay Area?

I look forward to everyone's expert advice.

Danke schoen,
Gordon

The cops sometimes buy time on commercial LTR systems or use some LTR provided by local corporations. Of course, at the times the PD uses these LTR systems, they aren't exactly busy so you can track them. You may be able to find some posts from a few years ago regarding "bounty hunters" on this list. They turned out to be San Jose PD. I don't know if this is still being done. I had read that the Palo Alto narcs were using the HP trunk system, but I never verified this myself.

The GRE APCO25 decoder works better than Unidens. However, if you wait for the next generation Uniden, I suspect the differences will not be as dramatic.

If you were going to do computer control, I'd say get the Uniden. But in your application, I'd get the GRE radio. However, you still want to program it via a PC, so you might want to think about this as you mount the radio to gain access to the port. Or is the programming port on the front?

I haven't seen the 2096, but it is supposed to be just a mobile version of the Pro-96 (which I do have), and I know a program like Win96 comes in very handy in setting up the radio. In fact, there are some split trunk systems you couldn't program without Win96. Win96 also restores milair to the radio.

FSP (Freeway Service Patrol) also uses LTR, but only active during commute hours. Good for details on freeway traffic events.

You can always scan the traffic helicopters.

If it were the next generation Uniden, this might be a contest. But those Vfolders on the rat shack come in handy.

Looking at the pro2096 manual, the programming port is on the front panel. I don't see anything similar on the Uniden. That is enough to do it for me. This is the kind of radio you don't want to program by hand.

Of course the white panel kind of screams "steal me." It won't match most car interiors.

the V files are great BUT , with the amount of memory the BC246T has the the amount the 396 will have , the Unidens will be just , if not better. The 246 does not do digital while the 396 will have it.

I have the 246T and its loaded with freqs for Fire/EMS and LE for 12 counties in the bay area plus Sacramento and Washoe(Reno-Sparks area) in Nevada and I have only used 46% of the memory.

Yeah, Da Chron has it.....Dolores Park , 18th and Dolores with a
march to Civic Center. Da Chron doesn't give the time , but I recall hearing 11am
, thats about the normal time for these things anyway

For those who can get SFs system , the usual tac channels should be busy

A9/ TG 13104
A10/ TG 13136
A11/ TG 13168

YO Ben.....can you lockout the normal dispatch TGs if your home
today for this thing by chance ?? just scan the above 3 ????????????

I think when 4 of the 5 BC's are on calls, the remaining BC, in this case B10, goes to the ECC and oversees calls and deems if it's a single engine call or warrants a structure response.

hey guys, i have a friend whose father served in the radio signal corps during wwII - and has a scrapbook of ephemera related to his service. is there someone who is a history buff who could help put some of these things in perspective? do the bases or local radio clubs maintain a library of archival material for reference or nostalgia? wondering what the best thing to do with this memorabilia might be, too precious for this family to discard?

related questions: what was the rag chewers club, the order of the dirty bird?

Rag chew is slang for yak and yak and yak then yak some more on a ham radio. [Or is it yack? Yada yada yada.]

Dirty bird could be just about anything. There were attempts to make U2 spy planes less reflective to radar. Those planes were nick named the dirty bird, but that would be after WWII.

About the closest thing to a radio museum is the Perham Foundation, but they are probably stuff to the gills with such info.

Sounds like they're shutting down several streets in the area of South Spruce, North Canal, and Commercial. Companies report they're having to check out damage on foot due to numerous power lines down. PD reported a gas leak of some sort in the area too, not sure of the status of that though.

Fireground is Control 23 - 154.04 and is available on FireDispatch.com

This in via EDIS -

SPECIAL WEATHER STATEMENT
NATIONAL WEATHER SERVICE SAN FRANCISCO CA

SUN MAR 20 2005

SAN FRANCISCO-SAN MATEO COUNTY-

AT 340 PM THIS AFTERNOON THERE WERE SEVERAL REPORTS BY THE PUBLIC
AND AN OFF DUTY NWS METEOROLOGIST OF A COLD AIR FUNNEL CLOUD OVER
SOUTH SAN FRANCISCO.

STUDIES OF COLD AIR FUNNELS SHOW THAT THEY SELDOM TOUCH THE GROUND
AND RARELY DO ANY DAMAGE. THESE FUNNEL CLOUDS NORMALLY PROTRUDE A
FEW HUNDRED FEET DOWNWARD FROM THE BASE OF THE PARENT CLOUD...AND
LAST A FEW MINUTES BEFORE DISSIPATING.

The vote for UNDER-statement of the year. Seldom became F-1 tornado
"did"... LOL

IC's last count was 14 structures damaged, numerous power lines still down,
natural gas lines damaged, and extended operations.

They have some type of helo airborne for damage assessment.

Fireground stuff is on www.firedispatch.com as "IC" and "Railroad branch"

Latest NWS statement says another band of "strong" thunderstorms are off
the coast and headed our way
soon to include lightning strikes.

Welcome to Spring.

From: Bob Underwood
Topic: 38250 Message: 38264

The Perham Foundation was merged into History San Jose a couple years ago; now it is the Perham Collection of History San Jose; I think none of it is yet on display (it may take them YEARS to go through it all). History San Jose quite properly tries to concentrate on stories closely related to San Jose; I can't really think of a good suggestion for the type of memorabilia you describe.

I agree with Gary about the rag chewers club; there used to be an ARRL award called RCC, but I just looked at the web site, and didn't see it; it may be history too. I don't know of any explanation for "order of the dirty bird"; sorry.

Bob U. (formerly on the Perham board of directors)

thanks gentlemen, for your thoughts... the rag chewers and dirty bird awards were circa 1970 -- not so very long ago!

happy for the input and to know about the perham collection...

nina

Technically, the "dirty bird" is Project Rainbow. You can download the
CIA report on the project here:
http://www.odci.gov/csi/books/U2/index.htm

Now that you know "rag chew", there aren't too many secret ham words left.

Fire Bottle: vacuum tube

Boat Anchor: a heavy electronic device, often using fire bottles

barn: garage

destinated: the state of reaching one's destination, as in "I am now
destinated and I am about to put the car in the barn."

fine business ham: although you can't discuss business on the ham
bands, a person who follows the rules to a T is a fine business ham.
Ordering a piazza over the repeater phone link is not fine business.

Not all of what was said is TRUE
"Ordering a pizza over the repeater phone link(AutoPatch) is not fine business"

I (being the ham) can order a Pizza over a phonepatch (Autopatch)
as long as the Pizza Joint is not a ham, but I can call a Taxi or Tow
or Pizza and many other things.
I can not order a Pizza over a Ham repeater, Now that doing business,
i.e. the Pizza joint has a two meter radio and is using it to take
orders on the Air

(w0web to Mike's Pizza Joint can I have a large combo hold the fish
and a 6 pack of Bud, Dude) that is just so wrong in so many ways

Nina,

Where did he serve? There may be a historical society either at the base or bases he served or the US Army Signal Corps. There's also an Army museum at the Presidio that, even if they are not interested in the material, may be able to give you a lead on who is.

38270. Re: Tornado - South San Francisco

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-03-21 05:03:45 UTC
From: jjcooke@yahoo.com
Topic: 38262 Message: 38270

I saw the video of this on KTVU. The damage looked a lot more consistent with a downburst from a cold weather funnel than an F1 tornado. The videos of the cloud mass also didn't show a funnel cloud extending to the gound. The most structural damage I saw was broken windows and facade damage, which is less than what I would exprct to see for an F1 tornado. They'll do an aerial check to see if there's a consistent path of damage. If there is, it would probably be classified as an F1 tornado. If not, it would be downburst or straight line winds. Either way, it must have been a scary couple of minutes for the folks down there.

I doubt the people with damage care LESS what they call or classify it as
!!!

I saw a funnel cloud very close the the same area several years
ago.......driving up 101 approaching SFO I spotting a " formation" which I
usually only see on the news from places like Kansas......I wasn't sure until SFO
Airport Fire broadcast information of a funnel cloud spotted at the north end
of the airport !

Fresno CHP received a cell call from a suspect who had been arrested by a police officer with a name similiar to chivara. Unknown which jurisdiction or location of the officer. The perp said he had been arrested for narcotics violations. He further stated that he was going to walk in to a police station and 187 a police officer.

I got this over San Jose Police channel 1. I assume its being broadcast statewide.

San Mateo County Sheriff's Office Bomb Squad was just activated for a suspicious device found at an unknown location in Burlingame.

Wherever it is, Burlingame PD officers are on-scene, and the bomb squad supervisor is calling the BPD Sgt on scene via phone to have him describe the item while they're en route.

Burlingame PD 1 -- 489.0875, 2 -- 489.5625. San Mateo County LEA Mutual Aid -- 488.8875, "Green" channel.

This may or may not be related to a VIP who was town over the weekend for a low-profile visit & staying in the Burligame/Hillsborough area with Secret Service protection, but I think that guy flew out Sunday afternoon.

Ah. Makes me long for the good old days when the only closures for a VIP transport consisted of CHP leapfrogging to close offramps and cross-streets while the motorcade passed enroute to and from the airport. ;-) Maybe public officials should just appear by holographic projection and never actually leave their hardened combination office and residences. :-p

So where's Marine 2 taking him? Since he didn't leave on Air Force 2 it would seem he's not going very far.

Cheney and his entourage had 3 floors of the hotel. I hate to think what
this cost us.

Interesting drill in Marin county; Novato FPD is doing a drill with a trapped firefighter in a building, and two firefighters in a Rapid Intervention Team going to get him. It must be a pretty large scale drill because they're using two TAC channels. Fun to listen to - glad it's only a drill.

MERA:

28880 - TAC D4, Fireground and Rapid Intervention crew members
28944 - TAC D6, being used by IC to contact trapped firefighter

4:10 pm

38296. Weather Info

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-03-22 08:28:04 UTC
From: Robert W. Sanford
Topic: 38296 Message: 38296

When I lived back in NYC and was VERY involved with many volunteer titles one of them was the SKYWARN Coordinator for NYC. Particularly with the weather we are having currently its not a bad
idea to know the following information when it comes to flooding.
Its hard to believe that it takes only 2 feet of water to float most regular passenger cars.
Its also the number killer in weather related deaths even beating out Hurricanes and Tornado's.
Anyway hope nobody minds the slitely off topic post but the weather we are having is also going to make for lots of communications to monitor.

I just had a 45 gust here at my place in Sausalito.

Robert
BayScan

PUBLIC INFORMATION STATEMENT
NATIONAL WEATHER SERVICE SACRAMENTO CA
647 AM PST MON MAR 21 2005

...2005 NATIONAL FLOOD SAFETY AWARENESS WEEK BEGINS TODAY...

THE FIRST ANNUAL FLOOD SAFETY AWARENESS WEEK KICKS OFF ON MARCH 21ST AND RUNS THROUGH MARCH 25, 2005. NOAA'S NATIONAL WEATHER SERVICE OFFICES THROUGHOUT THE UNITED STATES ARE WORKING TOGETHER TO PROVIDE THE PUBLIC WITH INFORMATION ON WHY FLOODS ARE A SIGNIFICANT WEATHER RELATED HAZARD IN THE UNITED STATES.

THE GOAL OF THIS CAMPAIGN IS TO HIGHLIGHT SOME OF THE MANY WAYS FLOODS CAN OCCUR, THE HAZARDS ASSOCIATED WITH FLOODS, AND WHAT YOU CAN DO TO SAVE YOUR LIFE AND PROPERTY.

FLOODS ARE THE DEADLIEST WEATHER-RELATED KILLER IN THE UNITED STATES, AVERAGING 106 DEATHS PER YEAR BASED ON A 30 YEAR (1974-2003) TIME PERIOD. THE MOST FRIGHTENING ASPECT IS OVER HALF OF FLOOD DEATHS OCCUR WHEN PEOPLE DRIVE INTO FLOODED ROADWAYS OR SIMPLY WALK THROUGH MOVING WATER.

SIX INCHES OF FAST-MOVING FLOOD WATER CAN KNOCK YOU OFF YOUR FEET. A DEPTH OF 2 FEET WILL FLOAT MOST AUTOMOBILES. WHILE MOST FLOODS CANNOT BE PREVENTED, THERE ARE SIMPLE STEPS YOU CAN TAKE TO PROTECT YOUR LIFE AND PROPERTY.

FLOOD SAFETY TIPS:

* IF FLOODING OCCURS, GET TO HIGHER GROUND AND STAY AWAY FROM FLOOD PRONE AREAS.

* DO NOT ALLOW CHILDREN TO PLAY NEAR HIGH WATER, STORM DRAINS OR DITCHES. HIDDEN DANGERS COULD LIE BENEATH THE WATER.

* FLOODED ROADS COULD HAVE SIGNIFICANT DAMAGE HIDDEN BY FLOODWATERS. NEVER DRIVE THROUGH FLOODWATERS OR ON A FLOODED ROAD.

* DO NOT CAMP OR PARK YOUR VEHICLE ALONG STREAMS OR WASHES, PARTICULARLY WHEN THREATENING WEATHER CONDITIONS EXIST.

* BE ESPECIALLY CAUTIOUS AT NIGHT WHEN IT IS HARDER TO RECOGNIZE FLOOD DANGERS.

ADDITIONAL INFORMATION ABOUT FLOOD SAFETY AWARENESS WEEK IS AVAILABLE AT: HTTP://WWW.NWS.NOAA.GOV/FLOODSAFETY

NOAA'S NATIONAL WEATHER SERVICE IS THE PRIMARY SOURCE OF WEATHER, WATER AND CLIMATE INFORMATION. THE NATIONAL WEATHER SERVICE OPERATES THE MOST ADVANCED WEATHER AND FLOOD WARNING AND FORECAST SYSTEM IN THE WORLD, HELPING TO PROTECT LIVES AND PROPERTY AND ENHANCE THE NATIONAL ECONOMY. TO LEARN MORE ABOUT THE NATIONAL WEATHER SERVICE, PLEASE VISIT HTTP://WWW.NWS.NOAA.GOV

On my way in today I heard SJPD hold the air on channel 3 for a "mini-riot" at Piedmont Hills School... listening to it I understood the principal to have been assaulted... I did not hear how it resolved though before I arrived I heard them go to "restricted traffic" which apparently meant "drop the EIP tone and yell at anybody talking who's not attached to that incident."

Does anybody have any further?

>

First off, the MERA system operates in the 482-488 MHz range. At this time, the MERA system is gradually being phased in, and the lowband system is being phased out. When MERA is fully implemented, there will be no lowband in use by Marin city/county agencies (CHP will still be on lowband). Some of the lowband freqs are currently being *patched* into their respective agencies' main MERA talkgroups (Example: San Rafael Fire F-16/46.20 MHz is patched into the Control E-2 fire talkgroup). The patches are mainly for training/convenience purposes, as they are not 100% reliable for cross-system communications.

The current agencies fully on MERA include: Novato (PD, Fire, DPW), San Rafael (PD, DPW), San Anselmo PD (DPW?), Fairfax PD, Twin Cities PD, Mill Valley PD, and all medic-hospital radio communications in the county.

San Rafael Fire will be the next agency to switch to MERA. Central and Southern Marin fire agencies are scheduled to be fully on MERA before fire season is in full-swing.

Marin County Fire and the Sheriff will remain on lowband in West Marin for quite awhile, as the Bolinas radio site issue has still not been resolved.

I left home around nine and got to my site about 20 after... so in and around that time frame. Like I wrote, the EIP tone was on channel 3 and they quite clearly were talking about Piedmont Hills High. They weren't talking about a large presence patrolling the area as much as responding to the school campus... I guess your definition of "large" comes into play here... I only heard about five or six different callsigns and did not get a clear picture before I arrived and had to go into to face my not-so-little monsters. I've noticed the kids being more activated lately... something I believe is due in part to the fact that these last two weeks in March are those in which the days lengthen most acutely, and it kinda turns people on and they seem a little extra crazy.

My wife just called me about the Baby Bullet train hitting a parked car in Palo Alto. I can't confirm this yet--I'm glued to the computer trying to complete a final. However I did hear on RR Ch 47 ""Everything is looking OK. We're just missing one headlight."

Also heard mention of Charleston Rd. I cannot confirm if this is the location of the accident.

Railroad Ch 47 160.815

Date: 2005-03-23 16:49:20 UTC
From: caladded@aol.com
Topic: 38327 Message: 38327

Fire went to 6 alarms about an hour ago, original report was about 0513 hours.

Command 4/ 153.98
Tac 5 / 155.88
Tac 6 / 1 54.355

Address is 877 Willow @ Byrd .....IC advising the C/D corner of the 3rd floor is in danger of collapse , some of the roof has gone in , still plenty of hotspots. Some of the crews are getting relieved (E3 E1 T1 T3 just now). Not sure of what M/A units are at the fire except Santa Clara CITY Truck 2 is there , I would guess 2 Santa Clara City Engines as well. The 4th alarm would have been SC City I assume , the 6th Alarm was also mutual aid but I can't confirm which units

Milpitas E1 E4 Sunnyvale T2 and County BC3 did get sent to SJFD Station 5 on 10th street near 101. In fact I caught MFD E1 and Sunnyvale T2 get calls already.

Valley Transit had at least 3 buses on scene to get people out of rain and I assume get them to any hotels the Red Cross was setting up for those who need it. NO question the entire building is uninhabitable.

KRON seems to have the best coverage including early footage showing heavy flames on 2nd and 3rd floors and thru roof although KTVU showed some amatuer footage , shot from up in the hills , maybe Los Gatos hills showing lot of fire.

Without hearing the calls.....I still can give a pretty good list of units..

Engines 4 3 6 Hose 6 Trucks 4 3 BC1 10
Engine 30 7 Truck 1 BC 13 Air 6 HIT 29
Engine 13 1 Truck 14 BC 2
Engine ? ? Truck 2 USAR 13

the above would be alarms 1,2,3 and 5 alarms 4 and 6 are mutual aid

Chief of Dept Clets is in charge
Comm VAn 26 is there and I am sure some other units.
I am guessing Santa Clara County as at least 1 or 2 Engines and a Truck there as well

From: caladded@aol.com
Topic: 38328 Message: 38328

As I look at a map ,,,,,,,Engine 6 and Hose 6 should have been first due followed by Engine and Truck 3 then maybe Engine and Truck 4

I feel Engine 26 would be there and either Engine 10 or 14 and that should round out my list

btw, NO sprinklers in building...........KRON , forget her name, mentions it raining and that should help fire fighters.............WRONG !!
at least the reporter on the scene Tao Terez (or something like that) mentioned that he didn't know if it would help or not. BTW, I called KRON to let them know it went to 6 alarms (I hate it when they are NOT accurate , just a thing that bugs me) They DID update it

sounds like the IC asked for more overhead (chiefs) hearing Mountain View 18A6 on White 1.......maybe headed to the fire. I'll continue to monitor white 1 as there should be more Chiefs if I am right.

IC has placed the fire under control at 1017 hour , intial response
was at 0508 hours

there was also a MVA on Tully , unknown cross with 2 fatals , just
prior to this. I forgot the response to this , but would probably be unit from
at least 2 of these stations..... 26 , 3, 16 , 18. this would
adjust the units sent to the 6th alarm. I am also hearing E8 and T9 at staging at
the Willow st fire.

Santa Clara Engines 7 4 and Truck 2 released from the fire.

Probably not, unless they let the license lapse a LONG while. I'm sure
Don can confirm, but I'm pretty confident the FCC wouldn't not let a
licensee (especially public safety) get their old frequency back
unless it went a LONG time expired.

I'm totally unfamiliar with Tracy PD - did they change bands, i.e. VHF
to UHF?

I'm pretty confident it was for reasons other than not being able to
get their license back.

Again, I can see the FCC telling Joe's Taxi "too bad, you let your
license expire, we have to give you new frequencies" but a PD? I doubt it.

Actually, once the license expires the user has to start the process over - San Jose Taxi, or San Jose PD - on a first come, first served basis. So if the City of Santa Luisa were to let their license for their PD channel lapse, and the City of Cooneyville next door was looking for a channel, Cooneyville could licnese the channel, and complain that the channel was being illegally occupied by Santa Luisa - and be right.

> I'm totally unfamiliar with Tracy PD - did they change bands, i.e. VHF
> to UHF?

Nope. License expired, and IIRC, Stanislaus Co licensed it (showed availble in the FCC database).

38338. Command 4 and San Jose's 6th alarm

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-03-24 01:12:15 UTC
From: Craig Tomasello
Topic: 38338 Message: 38338

I monitored Command 4 this morning on my way to work, listening to what was the 4th alarm at that time and I noticed that the radio traffic was exceptionally horrible! Ops kept trying to reach different crews (Division A, Roof Group, Staging, Rehab) and everyone's transmissions were covered by what sounded like an open carrier. Ops was noticeably frustrated with the crummy reception. What I'm wondering is if COM26 keeps the repeater open, much like Santa Clara Fire's repeater does after someone transmits. It was terrible! Anyone else notice this?

On KNTV (NBC) this morning, they interviewed one woman who noted there was no prior notification of this fire, meaning NO FIRE ALARM! Most were woken up by the sounds of people screaming fire or the sirens.

I a fellow electrician who lives there, he was interviewed on KCBS and said that there was just tons of smoke and he had very little time to get a flashlight and get his pet snakes out.

I noticed too Comm 4 did have open carriers from time to time. Still , I am assuming the Fatal MVA on Tully was on Command 3 which forced this fire to be on Command 4 which obviously was better to monitor since its on a repeater

Craig , I heard them mention they were using Tac 6 , wondering if they used more than one tac channel considering the number of units/divisions they had ? catch that by chance ?

Actually...

There is a 30 day window after the expiration date to file a waiver
for late renewal. After 30 days all bets are off. It takes the FCC
about 60 days to cancell the license.

Actually --- KVZ-588 was the OLD non-trunked license that expired and there are and were other licenses for trunked operation that had been granted before the OLDER permit expired. So they always have held a valid license and no need to re-instate any license.

Another reason NOT to use an Internet based telephone system. I figure this is scanning related enough to send out and also a good thing to know if your thinking of switching to an Internet based phone service...

Does 911 Access From Internet Phone Services Affect Your Telecom Plans?
03.23.05, 8:00 AM ET

We should have known that Internet-based phone service was going to face more static. Voice-over-Internet Protocol, or VoIP, telephony has gotten the blessing of the U.S. Federal Communications Commission and attracted the attention of companies like Verizon Communications, Comcast and the America Online unit of Time Warner. But the attorney general of Texas, who has decided that consumers need protection from this low-cost telecom alternative, yesterday sued VoIP provider Vonage for failing to clearly tell users they can't automatically dial 911 for emergency calls. Because VoIP routes calls over the Internet, 911 operators can't determine the location of the caller the way they can with traditional landlines. Vonage pledged cooperation with the attorney general, but said customers are told how to activate its 911 service during subscription and are sent e-mail notifications if they don't activate the emergency service.

Does anybody know the details of the Vonage 911 service? I'm curious what that means... of the top of my head I'm guessing some sort of translation of "911" into the 7-digit emergency number for the appropriate 911 center.

I think My Packet8 phone is great.
We have unfortunately had to use the 911 service. Which worked as well as the SBC landline had.
I know I was explained that this is an OPTION. That you have to give them a locationto be set as the "main" address used, and that 911 will have ONLY that information to route your call to THAT local 911 service.

SOunds like User error to me.

I don't believe so since it transfers the e-911 information which I don't believe can be sent on a 7 digit #. I believe your # is sent to a local switch which then calls 911. But then again, I've been wrong before.

FYI, Verizon in Sunnyvale (and I'm sure other areas) calls the PSAP. I know they get a phone number at least. I heard a BOL on the radio, and saw what I thought was the vehicle, called 911, but then noticed something on the vehicle that told me it was incorrect and hung up (the phone was ringing a few times, and I figured PD was busy). They called me back, left me a voicemail, I called them back and told them what happened. IIRC, they said "Mr. Platt", but I'm not 100% sure on that, nor do I remember if my voicemail said my last name.

Anyone... anyone ... anyone? ;)

Given the reliability of DSL, I'd certainly have a cell phone if I got a VOIP. [Speakeasy has the digital only plan too.]

We have been using Vonage since January. It is great. Yes, there are some times when the quality is not as crisp as copper based telecoms, but those are few. I thought the 911 piece was handled well. Lot's of information up front, clear notice that 911 service via VOIP was not activated till they told you,clear form to complete, email notification when activated.

Fortunately, we have yet to need to use 911.

It sounds like in Texas, they may need advanced training....

Actually all calls to 911 are translated to the 10-digit number for the appropiate PSAP, based on your ANI. Automatic Number Identification (ANI) corresponds to the subscriber's seven digit telephone number. ANI combined with ALI (Automatic Location Identification), if the PSAP is using E-911, will provide the location and other information, including your name IIRC. I don't deal with the ALI side of 911 calls, but I do deal with the ANI side, working for a telco. This of course is a very simple overview.

This was covered on one of those PM TV Magazine shows just recently.
Some family, I think in the DC area, had a home invasion. Daughter was
upstairs and tried to call 911 on their VOIP phone, only to be told that
they didn't have that service. IIRC the father was shot (beaten and/or
robber?)
but survived. Now they want to blame the VOIP carrier. Go figure.
Something about not having the E911 activated. I quite watching once
they started to blame someone/something else...

> It sounds like in Texas, they may need advanced training....

Reminds me of a boot-camp joke...

Later,
Todd...

When telling someone they should go back to school, keep in mind:

1. The first word of each sentence should be capitalized.
2. When asking a question, the appropriate punctuation mark is a question mark.

Ed, have a prozak. I was simply asking if you meant 5150 pc vs. some other code - 51 / 50 as in 2 separate codes.

Of course, I take the above with a grain of salt, considering this is coming from the person that feels the death penalty would be appropriate punishment for a news reporter who mistakenly says that there were 13 engines on a fire, not the actual 12 that were there, and that it was a 5th alarm, not a 4th - AND calls up the news line to correct them.

And correct me if I'm wrong again, but YOU were the one who put 51/50, not 5150 - methinks it's not me who need to go back to school.

Who would have thought my current line of work would come up enough here to give reason to comment? First, "5150" is a section of the California Welfare and Institutions Code, not the Penal Code. So the correct notation would have been 5150 WIC rather than 5150 PC. Second, the SSRI antidepressant fluoxetine is marketed under the trade name Prozac, ending with a "c" and capitalized since it is a proper name. I believe the "prozak" spelling may have been influenced by Muzak. :-p

BTW, these comments were made in good fun. They were not serious attacks or corrections, so please don't take offense. I merely wanted to make sure the teacher got it right too! ;-) LOL. Have a good day everyone.

Do I want to know your current line of work? <grin>

>First, "5150" is a section of the California Welfare and Institutions
>Code, not the Penal Code.

You're right, my bad. I can't find the link, nor can I remember how I googled it, but one link came up with 5150 PC, but it wasn't an authoritative site.

>So the correct notation would have been 5150 WIC rather than 5150 PC.

True true.

>Second, the SSRI antidepressant fluoxetine is marketed under the trade
>name Prozac, ending with a "c" and capitalized since it is a proper name.
>I believe the "prozak" spelling may have been influenced by Muzak. :-p

Could be. They'll both put you to sleep. Odd that my spell checker didn't have a problem with prozac.

>BTW, these comments were made in good fun. They were not serious attacks
>or corrections, so please don't take offense. I merely wanted to make sure

> I'm totally unfamiliar with Tracy PD - did they change bands, i.e. VHF
> to UHF?

Nope. They moved to an old radio-telephone pair 152.12 R (158.58), same PL (82.5). Don't see a specific license for them in the FCC DB for this pair, closest I see is Delta Valley Radiotelephone in Stockton (KMM630). But Tracy PD is definitely active on this pair, at least as of a couple of days ago.

For 155.37 (their old freq) the FCC database shows their KMA720 license expiring on 8/3/2003, and a new license WPZU675 granted 9/10/04 with an Auth Type of "Special Temporary" and an expiration date of 3/9/05. Anyway, when they switched to the RT pair (several months ago now) they haven't used this one as far as I can tell while listening to them every few weeks as I drive by.

BTW, Tuolumne County Sheriff has been simulcasting for a while on another RT channel 152.63 R - PL 127.3. So far the mobile freq for this pair, 157.89, is not used (they are still active on their old low band freqs), don't know if they are planning to make a switch. The point is the FCC DB doesn't show anything about this new RT channel use either. In fact, it shows as many or more expired/terminated licenses for rural telco's on these freqs, but nothing new... It seems obvious they are reallocating these as old RT usage drops off, but why don't the new licenses appear?

I have Vonage and had no problems setting up the 911 service. They tell you exactly how to do it, and if you screw up the directions they give you, you shouldn't have a computer in the first place.

38374. San Rafael PD after kidnappers in canal

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-03-25 05:36:10 UTC
From: inigo4688
Topic: 38374 Message: 38374

Teen girl called San Rafael PD said she was kidnapped in Richmond and taken to Fairfax St. in the Canal at gunpoint by two men (BMA, WMA?), then escaped and called the police.

Partial list of units:
3X10
3L38
3L43
and three more went 10-8 and responded. Units just advised code 4 but gave no other info as to the status of the girl or any 10-15s! I'll add those if they become available. 9:36 pm.

Even DSL and Cable are copper based. VOIP uses whatever's there.

I think the point he was making was v.s. POTS analog service.

Umm... you're mixing apples and concrete.

"Copper" or fiber optics are described as OSI layer 1, or the
"physical" layer in networking terms. "DSL" describes a
particular layer 2 or "network" technology; "Cable" would be
a different network protocol.

IP (TCP/IP) is the layer 3 or "transport" layer. Then, on top
of that you have the Voice Over IP application layer (layer 4).

POTS (Plain Old Telephone System) describes the traditional
analog telephone, a-la carbon button microphone, etc. These days
this is almost always turned into a digital signal anyway, as soon
as it gets to your local Central Office.

-- Dave, who still uses a Bell system phone with carbon microphone,
because it sounds the best of them all.

38378. New Norcal Approach Freq

> place last month and is permanent.

Interesting. Where did you find this? I am hearing traffic on 125.35
"cleared direct Oakland", and nothing on 135.4 ...

The most-current SF Terminal and Sectional charts that were released Mar 17
show 135.4 as still in use, paired with 354.1. Did the UHF pair change too?
If the change is true, I wonder why the FCC would publish something when
they new it would change immediately after.

I would caution anyone on making assumptions on VOIP 911 service. Although some companies are working on some ways to connect to the local SBC switch to route 911 in the traditional manner, every company I know of is simply routing these VOIP 911 calls to a local PSAP's (dispatch center's) 7 digit emergency number.

Yes , this will give you caller ID. However, most of us have gotten used to the fact that the dispatch center will know your location if you dial 911... On VOIP... they'll have your phone number , but it may take them awhile to find your address.

The answer to Brian's question may be that the right hand (cartographers) didn't know what the left hand (frequency coordination) was doing. Just my supposition though.

I stumbled into it myself when I picked my mom up at OAK yesterday... not having my concierge or my own maps available to look up the frequencies I resorted to just scanning until I heard relevant traffic. As one who is interested in underlying pathology, I'm curious *why* this change was made. Any ideas?

The change was made in a hurry, probably after the pubs went to press. I believe the change was due to interference on the freq either to the controller or planes flying over certain areas. Notams were sent out and the next cycle of pubs should have the correct freq. No change to UHF for that sector.

I can confirm it's use, I flew into OAK on a United flight last night
and was listening to Channel 9. We were handed off to 125.35 around
Tracy I guess, and from there to OAK tower [127.2]. It's been in use
for a a few weeks.

Bad joke time:

The principal of a private school was giving a speech. He said if a male student is caught in the girls' dorms they will be fined.
The first offense will be subject to a fine of 50 dollars. The second offense 100 dollars. The third offense is 150 dollars.
A boy stands up and yells, "How much for a season pass?"

Where are the traffic controlers located for 125.350. I can hear the aircrafts on the freq. here in Campbell but nothing else. Running a rooftop verticle antenna (Comet GP-6) that's about 45 ft. up so reception should not be a issue.

Thanks,
Brian in Campbell

Hey Brian, it's not a matter of where the controllers are located but where their transmitter sites are, and as far as I can tell the FAA actually doesn't publish that info for TRACONS. From my experience though their transmitters are located on hilltops around the bay (Mt. San Bruno might be one candidate for some departure sectors, along with some of the hills in the east bay). Norcal Terminal Radar Approach Control itself is located in Sacramento adjacent to the Mather airport, but they get their radio and radar from sites in the bay area via microwave relays. From what I can tell, 125.35 has been tested off and on for a while... mainly during east ops when oakland is landing runways 9L/R and 11, so it was probably originally a backup freq for the Grove approach sector (135.4). Finally Brian ATC transmitters are designed to radiate upward to reach aircraft (not people on the ground), so they'll always be weaker than normal repeaters which is probably why you're not recieving that sector. Example: I can get Berkeley PD and UCB's TRS from my house in Marin, but none of the nearby Norcal Approach sectors, and only Oakland Center sector 40 & 41 (127.8 and 125.85) because they're only a few miles away on Middle Peak, Mt. Tamalpias. Feel free to drop me an email if you have further questions and I'll help if I can. I'm a student pilot out of Gnoss field in Novato.

Xmtr/Rcvr are located at Oakland Airport, but as previous posts have indicated, the ground signal is hard to hear unless you are near the airport.

Ayup! I spent five years at DSC/Alcatel in Petaluma doing EMC on digital
loop stuff. Thing is, the same line card may have both POTS and DSL (and
not jsut one set, either) on a pair. Copper is just wire.

Cheers,

Cortland

The controllers at "Oakland Center" are located in Fremont. Norcal Approach consists of controllers from former approach controls at Bay (Oakland), Sacramento, Stockton & Monterey. All of those controllers were moved to a new facility at Mather Airport a few years ago.

Dave,

There was small fire in a dorm bathroom caused by a candle. It was put
out by a an SSU police offficer with a fire extinguisher and all the
fire trucks went home. Sounded like a much bigger deal than it was.

Regards, Jim

the full moon helps !! :-)

KTVU reports about 25,000 without power and a secondary explosion has occured creating more damage..... areas without power ..... South of Market, Tenderloin, Financial District , Chinatown , Western Addition.....to name some.

When this happened just before Christmas in 2003 , it was nearly 24 hours before all power was restored...

I heard that PG&E told the fire Co that it was safe and OK to
put water to the switchgear, at which time it exploded.
CO 2 (can't subscript) truck was called (the one that they use for
manhole fires).

38431. NORCAL 125.35

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-03-28 12:34:07 UTC
From: aviationplusphoto
Topic: 38431 Message: 38431

Hi Guys, Brian, Jordan, etc.,
I was looking here and saw a big discussion about the "NEW"
or what you thought was a new BAY APP/NORCAL Freq. of 125.35!
I informed the guys at BAYMILCOM (some that are on here as well)on the
29th JAN2005 that I had heard it for the first time earlier that day.
Even Moffett Field Tower said it was new to them as no one
informed them of new Freq. change.
I also made an informed guess that it was replacing 135.4 !
Remember this is 29JAN.
Now you can wonder even more why the change was not made sooner
for the lastest Pub. Your Intel is slooooow.
Cheers, Buddy

PS: Do any of you listen to San Francisco ARINC ?

Do any of you know where the various OAK & NORCAL local Bay
transmitter sites are located. I hear different quality and power
transmissions sometimes on the same Frequency?

Yes I hear ACS during drills and during elections when they use to work them.
(ACS) Auxiliary Communication Services
and MOES has TG's on both systems (DPW & DTIS)

DPW's system is 50000 & 50032
DTIS's system is 17424,17456,17488 & OES Announce is 17392

With NorCal 307.2 -> 298.95

Headed to Travis, then back to Beale.

Asked NorCal about how restricted VFR is in this area for civil aircraft; he's thinking of coming by for a spin 'taking the parental units out for a tour' ... 'afirm, just a single' :-)

16:57/PT

Yep, the T-38 "Talons" are all black with just red lettering on the jet.
Besides Beale AFB I've seen them flying in over the Golden Gate Bridge. They do
a large circle then fly in the direction of Beale.

They have a pic of the T-38 on the home page at:

http://www.beale.af.mil/ (http://www.beale.af.mil/)

>

Hey Gordon,

The ZOA map is so so for displaying restricted airspace, but even then it doesn't label anything or differentiate between Restricted, Warning, Alert, and Military Operating Areas. The only good thing about this site (and I've been there many times before I'm not bashing you for finding it) is that it lists every RCAG (Remote controlled air to ground transmitter, they're microwave-linked to the ZOA ARTCC facility in fremont), which is hard info to find unless you really know where to look. The only other place I can remember that lists it is the A/FD, Airport/Facilities Directory, which costs $4 and you really have to know where to look. Like I said recently, as far as I know the FAA doesn't publicly list TRACON transmitters. :(

If you're really interested in the sector structure of ZOA, I recommend this page:
http://www.freqofnature.com/aviation/zoa/index.html

FYI, there's no restricted airspace associated with Moffet Field (NUQ). It's just a Class D towered airport. The only red circle I see is R-2531 in the east bay, which sits directly over Lawrence Livermore National Labratory's Experimental Site 300. There's also A-682 over Travis, but I've flown through it quite a few times. It's an Alert area, meaning you have to stay alert and watch for high performance military aircraft, but it poses no restrictions to VFR flight.

This particular call wound up being a giant fiasco with duplicate calls
and no rescue required. There was one accident with a single injury.
This all happened right after a heavy shower moved through the area.

So that's why I heard and saw E4 go by the window. Didn't realize I could have walked outside to have a closer look. For the record, that was an *incredible* (and thankfully brief) downpour. I can imagine crashing in it.

Gordon,

It sure was a heavy downpour! Sounds like it's causing mayhem as it moves to the SE with another MVA around 85 and Santa Theresa in South San Jose.

Date: 2005-03-29 21:48:53 UTC
From: Craig Rose
Topic: 38451 Message: 38451

I have no details on this incident other than there is a possible structure fire working at Glen View Elementary School in the town of Gilroy.

The school is located at 600 Eighth Street cross of Carmel Street.

I am hearing sporadic communications from Santa Clara County on 154.280 advising that Gilroy will announce a staging area shortly. More details when/if they become available.

AGAIN , you miss the O/T Anytime there is a fire THIS large
ANYWHERE in the country I will post it HERE. I did so with the Highrise Fire in Chicago a few months back and it was appreciated..... the reason , another person used his BRAINS and mentioned it would be on the WGN 9 0'clock news which , of course , came on at 7pm HERE and almost the entire hour was devoted to the fire. .....This gave the fire buffs here (and this site is LOADED with them) a chance to watch LIVE footage of a major fire. I only wished there were more TV stations from other cities on my cable in which I could do this.

You notice I don't (and won't) post any fires UNLESS
they are VERY large , when they are OUTSIDE the area.

enough said.

38465. Scanning Oakland PD

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-03-31 02:48:02 UTC
From: inigo4688
Topic: 38465 Message: 38465

Hey guys, Oakland TRS is coming in unusally well up here this afternoon so I've been checking out OPD, and with the help of yahoo maps I cleared up some questions I used to have about OPD's talkgroups, and I'll post them if anyones interested.

First and foremost (I've seen a couple of posts here about this) I was always wondering what the patch TG 02-011 was for, because I could never find the same conversation on any other talkgroups. I don't know technically how they're doing it, but they're merging "Service 1" and "Service 2" into this talkgroup, and all the traffic takes place here while both the service talkgroups remain silent.

Second, I was always wondering what each of the Patrol channels were used for. Here's what I can ascertain from looking up addresses to calls this afternoon:

02-021 -- Patrol 1: Dispatch for Downtown and North Oakland
02-022 -- Patrol 2: Dispatch for area south of Downtown south of Macarthur Blvd.
02-023 -- Patrol 3: Dispatch for area south of Downtown north of Macarthur Blvd.
02-024 -- Patrol 4: Secondary dispatch and car to car tactical channel
02-025 -- Patrol 5: Secondary dispatch and car to car tactical channel

02-026 -- Service 1: License plate, d/l checks and updates on active incidents.
02-027 -- Service 2: Same as 1, there might be a regional difference when they're not patched but I'm not positive. Splitting the city north south would make sense but that's complete speculation on my part.

02-011 -- Service 1 & 2 patch

Since most of the patrol officer car to car communications are on Patrol 4 and 5, most of the guys you'll hear on the TAC channels are the OPD Narcotics team. They're an entertaining bunch, and they like Tac 4. The sideshow channels are also supposed to be good (02-05x range), though I haven't heard much of them since I don't listen to oakland enough.

Any corrections to the above are welcome, but I figured I'd post what I had since there's not a lot of oakland info floating around this list.

yeah guys, I don't post out of area stuff very often now do I ?

and it always 5 or more alarms and I don't even post ALL of those , for instance I hear of 5 alarms in NY from time to time but don't post them.

Had I heard of the Texas City explosion and fire , I would have posted it. BTW , how many remember " The Texas City Disaster"

anyone know what year (no fair using the internet , OFF the top of your head only LOL) HINT , it was 5 years BEFORE I was born

I've also heard that. Within the last couple days I've heard them patching patrol traffic to the other patch TG 00-001. I remember reading a while back that 00-002 is some kind of emergency TG but I can't confirm the validity of that.

Does anybody have info for the frequencies used by the public safety folks at Moffett Field?

Anybody know why the police and fire dispatcher started a few months ago to answer every aircraft declaring position reports and pilot's intentions when the tower is closed? It seems to irritate and or puzzle the pilots whom they answer, and I can't think of a good reason for them to do state the obvious that traffic advisories are not available. It makes sense in an emergency or if they're expecting a "lifeguard" flight, but other than that I don't get it.

Most activity on 153.89...

I heard a unit asking for a Pub Works dumptruck full of sand, and I
didn't think too much about it... but now I'm hearing that PG&E has
been called, and the IC is advising to notify "the town", because there
are a lot of contractors that need to be treated.

Seaport IC now asking for Truck 13 to bring a "C.D.I. monitor"...
requested ringdown is Code-2...

Bat 1, Bat 4 seem to be on-scene...

Sounds like something out near the Port of Redwood City...

My guess is drill. Firedispatch.com only shows BC3, BC4, E11, PR3b (Public relations?) PT9 and PT13. Doesn't sound like a 'full assignment' to me...

I take that back. Dispatched to E 11 T9 B3 to 700 seaport blvd - Seaport Refining and Environmental. Came in as a pressure switch in a chemical tank and a manual pull in the trailer.

It's archived on firescan.net - http://www.firescan.net/cgi-bin/playback.cgi?f=1112292000-5&sb=2527&t=1800&rate=56

Actually this has been going for a long time now. I know that at 10pm, tower asks dispatch, "Dispatch, Tower....how do you read?"...."Tower, Dispatch.....loud and clear."

If I was a pilot that was local, then I might know that the tower was closed, but if I was from out of town and transitioning, then I may not know. Plus I'm guessing that the atis info isn't being updated at night.

I've heard those comm checks for several months every day just prior to 2300 when the tower closes. The ATIS does announce the tower being closed... I'm not sure what logic guides the decision.

The airport diagram says ATIS/ASOS. That means when you tune the ATIS when the tower's closed, you hear the computer generated voice of the Automatic Surface Observation System on the same frequency (plus a pre-recorded remarks section by one of the controllers). When the tower is open, the controllers have a desktop computer that displays the ASOS information in real time, and they can use it as an aid while making their hourly ATIS recordings.

It sounds to me like Moffet's public safety dispatcher takes on the role of a UNICOM operator when tower is closed. Here is the Aeronautical Information Manual's description of UNICOM:

"e. Information Provided by Aeronautical Advisory Stations (UNICOM):

1. UNICOM is a nongovernment air/ground radio communication station which may provide airport information at public use airports where there is no tower or FSS.

2. On pilot request, UNICOM stations may provide pilots with weather information, wind direction, the recommended runway, or other necessary information. If the UNICOM frequency is designated as the CTAF, it will be identified in appropriate aeronautical publications."

UNICOM Operators are not Air Traffic Controllers and have no seperation authority of aircraft whatsoever. They're usually overworked airport employees who are trying to simultaniously answer phones and take fuel orders (or I suppose in Moffet's case a public safety dispatcher!), and a lot of the time they don't answer you on the radio at all. It's a valuable resource for what it is, when it's available, but it's still the pilot's responsibility to double check airport surface conditions to determine the active runway, self announce their position and listen to the Common Traffic Advisory Freq (same freq at Moffet) and look out the window for other traffic.

Hope that cleared some stuff up,

-Inigo

strut roofs are become very weak in a fire . truss type roofs have collapsed in many fires , killing fire fighters in some

I worked an auto body shop fire at 23rd and shotwell in the 70s , MAN it was nasty , I was backing up a couple guys on a 3" line at the entrance to the garage , we had fire on the left/right , in front of us and it was rolling up the ceiling towards the front when we (WHEW) backed out

won't forget that one.

Follow up: KRON TV had good shots from the Air last night,
This building at one time was the Delancey Street Auto Service (Many years ago) and is still looking for a cause.

Overnight we had other fire at Webster & Hickory, this was a fatal fire with one 802 (dead person)

38512. Power out in Berkeley

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-02 02:18:54 UTC
From: Jordan Hayes
Topic: 38512 Message: 38512

All my UPSs just blinked on and off three times (but came back).
Berkeley PD took a call 30 seconds later for "reports" around Acton and
Virginia. Next there was a call to BFD for "lines down and arcing" ...
sounds like a transformer blew up or something. Significant outage,
though: BFD just reported that the comm center is down and they would be
using portables. Lots of calls comeing in now around the city for
lights out, traffic troubles, etc. Most of downtown, north to the
tunnel; west to San Pablo.

Fun! :-)

Our power went off for a couple of seconds, on a few seconds, then off again for maybe 15 seconds then back on. I don't have UPS so I had to run scandisk when the power came back on only off a few seconds here in El Cerrito around same time as Berkeley.

I glanced at the map and see this is off Bambi Lane, for those who monitor SJPD fairly regularly this should sound familiar. I hear all kinds of crap going on in and around Bambi Lane.....not a great area at all, of course most of the area covered by Chan 4 isn't all too hot

Btw , (off topic) Baltimore Fire had a 2nd alarm + 2 Eng. and extra truck for a warehouse fire containing Styrofoam, every see how much smoke a Styrofoam cup gives when burned? Consider a warehouse full of the stuff!

I don't know if we will get a video of this fire. After all, it only went to 2 alarms + the special call for 2 Engines and another Truck. It did take some time to control it and probably a video of it would show a very Smokey fire. But its Baltimore, not Chicago, LA or New York.

personally I would love to see a cable channel for emergency stuff like this. Plus it would of course be full of cops shows etc. Clearly there is enough present and old cops shows, movies, etc., to cover most of now all of 24 hours. This thing is to get advertisement to pay the costs, FETN which is Fire Emergency Television Network is a good example but most cable systems don't get it, its piped into Fire Depts only. it WAS on my Moms' cable system AND mine at one time, but that's been several years. I would clearly get the interest of the fire buffs on this and other website like this all over the country. I would be surprised if it ever happens.

Vatican Says Pope John Paul II Dies at 84

By VICTOR L. SIMPSON
Associated Press Writer

VATICAN CITY (AP) -- Pope John Paul II, the Polish pontiff who led the Roman Catholic Church for more than a quarter century and became history's most-traveled pope, died Saturday night in his Vatican apartment. He was 84.

38528. Effectiveness of tazers?

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-02 20:36:35 UTC
From: Evan Platt
Topic: 38528 Message: 38528

Just watched Cops - Shots fired. And about 3 of the segments involve a suspect tazered. In most of the cases, the tazering simply annoyed the suspect. Heck, the last segment the guy simply pulled the 'cord' and then the tazer was dangling on the ground. The officers jumped the suspect, and while 4 officers were restraining him, one officer grabbed the tazer and was tazering him with no effect.

I've heard a number of cities to certify an officer to carry a tazer the officer is tazered. Has anyone here been tazered? (Hopefully anyone here who has was tazered as part of a certification to carry a tazer... <grin>)

I recall reading an article that a tazer can cause.. ahem.. problems if someone has a pacemaker...

You have to remember , COPS is a TV show and while its real , they like showing " exciting " stuff .....such as the guy yanking the prods out of his chest. I have seen the video of an SFPD officer tasered and he goes down in a heap. I have also seen a few tasers shots on COPS where they are quite effective.

Hi Evan,

Back in the day, (we are talking in the stone age) as part of the academy training we had to go through weapons training, witch included firearms, mace, and tazers. We all had to take a dose of both mace, and a nice jolt from the tazer. Some of us got knocked on our butts, and then there were some who seemed to not be affected at all. I know for me the mace sure did clear my nasal passages, but the tazer almost felt like someone was tickling me, I sure hope that the technology of the tazers has improved since then.

I know this is veering off topic, but the mention of Cops has brought to mind my favorite episode: the very first one. Suspect takes off on foot, officers go in pursuit, camera man moves the camera from his shoulder to a hand-carry and runs behind the cops. There's a few seconds of running before the camera fades out. Camera comes back on to police officer bent over now-compliant suspect on the ground. Officer holsters his nunchaku (nunchucks). :-D

MVPD is currently working a search for a bad guy who ran when them attempted to serve a warrant... perimeter originally in the area of Leong & Emily. Two K9s and CHP H32 helping. Not very exciting except for the bad guy is "armed & dangerous) and H32 is shaking my walls as they orbit!

Their description and the effort they've invested makes me suppose the either A) he's a much badder guy than they've said on the air; or B) they're REALLY bored. It 'twas enough for me to turn on the porch light and make sure the door was locked. :-\ Also kept me from going out for a considered midnight snack. We should have bad guys in the neighborhood more often. It's good for my belly. :)

Now search has moved to the Stevens Creek Trail on the other side of Moffett. They've asked NASA PD to check the west fenceline along the creek.

Nothing further unless something worthwhile happens.

It sounds like some kind of riot with like 20 people. Location unknown - they're calling it "Lot 30." They're asking for "Less lethal units." Currently involving every Sheriff unit from area 1 (Marin City), the area 2 units (Kentfield), one area 3 unit (Civic Center San Rafael), two Mill Valley PD, two Sausalito PD.

That makes:

1x10
1z11
1z12
1z13
1x21
1z31
9z60
9z61
10z50
10z51
12z70 ? (from Tiburon PD)

A LOTTA PD!!!

Rifles deployed, crowd dispersing...

SHOTS FIRED just now. Couple 10-15s. Crazy buisness whatever it is, I wish I knew WHERE this was. 0436 hrs.

Morning all...

I am listening to Santa Clara County Fire working as the mutual aid unit with CDF (151.445) on a HAZMAT detail at Uvas reservoir for two containers of an unknown substance. The HAZMAT unit just advised CDF Morgan Hill that they are now accessing the containers and request a timer. Morgan Hill responded with the current time. What is the point of this request? Just wondering if anyone has some insight.

Thanks!

Keeps them abreast of just how long they are in a dangerous area (in this case " the hot zone" which is indicated by red tape (as opposed to the outer zone which is marked by yellow tape)

If anyone here in Marin had ever been to the old Marin County Sheriff substation in Marin City you would have noticed they had thick steel plating all over it. Why? Because over the years people would take pop shots at it with rifles, hand guns, you name it hoping to hit someone sitting inside. This was back when Best Buy etc. was the site of the Marn County flea market and things in that area were worse but they really haven't changed that much.

I heard the Richmond end of the chase, CHP had the driver on their Infrared
and I think they caught the passenger as well. A resident saw the guy in
the red shirt run by their window.

well, anything on a recorded channel. i don't know any agency recording
all their traffic on _all_ channels though. there are unrecorded tac
channels, often simplex ones that aren't going through a dispatch console.
besides, nobody wants to spring for the equipment recording an entire
trunking system's worth of traffic.

Lot 30 is off of Drake Ave in Marin City.. It is one of the smaller old condo style project houses on the left across from the church as you get off the Marin City Exit.

38556. 172.9

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-04 00:30:58 UTC
From: fremont48
Topic: 38556 Message: 38556

Greetings
I have been monitoring some traffic off and on 172.9. It is digital,
atleast my 2096 says "DG" then the frequency becomes active.
Would anyone know who is on this frequency?

TIA

fremont48

I think Ed's answer is a little more concise. The DAT systems most agencies use also record the time along with the audio, so even if dispatch never said the time, there would still be evidence of what the time was.

THANK YOU Bayard!!!

As for Belvedere being out of control, you gotta come to Fairfax and San Anselmo! My high school wanted to have a uniformed SAPD officer on campus. My friend was quoted in the paper as saying "I think it's a great idea, as it will finally put a stop to the continuous gang violence on campus between the bloods and the crips." LOL!

Some insight into where I live: Think nothing but 5150 and 11357 ;^)

The most simple explanation would be just to give the IC a heads up on
time wise on the call. People can loose track of time while on an
incident. If the fire is still rockin after a certain amount of time
its time for more resources.

38560. Dryer Fire San Rafael FD

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-04 00:54:22 UTC
From: inigo4688
Topic: 38560 Message: 38560

I think it's somewhere in Marinwood missed the address though.
Residents evacuated their two story house because their dryer caught on
fire.

Units Responding:

Engine 52
Engine 56
Engine 58
Truck 57
Medic 56
Chief 58
Prevention 50

As of now E56 and E58 have the fire contained and have cancelled all
other units. 17:54 PDT

Evan has a good point , many years ago at an SFPD exhibit , they were playing some audio of " hot " incidents including a few pursuits and the Shooting into Ingelside Station that ended up with the death of Sgt. John Young (the road leading to the station is now named after him) this was around 69/70.

Besides the radio, you could hear a " time stamp" being announced , I believe around every 10 seconds.

Although it wasn't mandatory to "ride the buffalo" to be
certified,...I tried it. That video (posted by another Bayscan
member) of the guys linked up in a chain doing the funky chicken dance
pretty much sums it up.

Transportation Security Agency, at least here at San Jose airport.
Non-encrypted here but rather boring--mostly hourly reports on quantity
of traffic though the screening checkpoints.

Hello all

Just a quick question regarding police. What is the difference
between
a Sam unit and an Ida unit? I also have herd David and Paul units.
Are
these just a way of identifying the police or do these units actually
differ? Another question I have is Do traffic units get paid the same
amount as a regular unit? I was just wondering

Thanks for taking the time to answer

Kyle (in Antioch)

Seeing that you're from Antioch, I assume your questions refer specifically to Antioch?

I can't answer the unit call question about Antioch--each agency is different.

However, I can help with the pay scale. Public servant pay scales are public information. Usually each agency--State, County, Local, etc.--will list pay scales on their respective agency's website. Try searching for "Human Resources" or "Personnel". For example, here is the payscale for the police of Antioch:

http://www.iedasurvey.com/docs/IEDA223_1301_PUBLIC%20EES%20MAINT%20WORKERS%20UNIT%20I%20SAL%20SCHED.pdf

Some agencies will even post labor contracts, sometimes called "Memorandum of Understanding" or MOU. These will show you everything about each job position: descriptions, responsibilities/requirements, pay (salary and various benefits). The City of Antioch has theirs. Do a google search for "city of antioch", for the City's website.

Sam and David seem to be commonly used for Sergeants and Detectives respectfully. Paul and Ida might represent patrol officers while on different shifts. Each department is different so you've really got to listen to the context of where these units are going, when, and what they're dealing with to be sure.

In Marin everything is completely different. Most PDs use X for Sergeants, L for patrol officers, K for "investigators" (kind of a broad catagory here, including K9s. My local K9 unit is 5K9), and then the Sheriff's office uses X for all their deputies on the day watch and Z for deputies on their evening watch, from what I can tell.

Hope that helps somewhat,

-Inigo

For San Jose and Santa Clara County SO, call signs are usually as
follows:

First number specifies shift 5 for day 6 for swing and 7 for graveyard
2nd number specifies type of unit 1 officer or 2 officers
The letter signifies the district, or for the SO's case it signifies
the city of patrol
Last number signifies the beat.

Example for San Jose:
71F(Frank)3 Would be Night shift, one officer, district frank, beat 3

Example for Santa Clara County SO:
51G4
Day Shift, single officer Gilroy beat 4

Anyone feel free to add to this if I missed anything.

38582. Encrypted traffic on SJPD 17

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-05 02:04:39 UTC
From: Johnathan Corgan
Topic: 38582 Message: 38582

I'm hearing an extended "conversation" on SJPD channel 17 P25 channel, which is encrypted (and thus of course unintelligible.)

This is the first time I've heard them use the encryption for all parties in the traffic; in the past I've heard many times one station encrypted and all other stations in the clear.

Of course, this could be just one station; it's hard to tell without listening on the repeater input.

Speaking of which, it's not +5 MHz, or I just can't hear them. Anyone know the input frequency?

-Johnathan

you just can't hear them. fyi, the standard offset for anything from 440-470MHz is 5MHz, and +5MHz is on the money. san jose is vast, and without a decent outdoor antenna for listening you're not going to hear the portables unless you're within a mile (in general, there are always exceptions).

I didn't hear the event, but in the past the channel was not encrypted,
just Apco 25.

I think the offset in that band is +3Mhz. I'm sure you could figure it
out from the FCC database.

In addition to the Sheriffs doing road closures and such, I've heard a lot of the county public works road maintenance crews on highway 1 recently. They're not on MERA yet until the Tiburon and Bolinas sites are operational most likely. Marin County's DPW freqs are:

County Public Works "Control 10" - 156.24 PL 127.3 -- I've never heard anything on this and they might be switching to MERA TG 11600 very soon.

County DPW Road Maintenance "Control 20" - 151.04 PL 203.5 -- This freq doubles as Marin County FD's Mutual Aid channel with CDF, but I've never heard it used for that purpose. Then again, I haven't been listening very long.

Municipal DPW channels (not that you'll hear anything on panoramic or hwy 1) are all on MERA, and can be found in the files section here or at radioreference.com.

Cheers,

-Inigo

I've got a 5-element 450 MHz beam at 30 ft, pointed north from the mouth of Almaden Valley. It's got a line of site to most of San Jose except Berryessa district, which is blocked by the hill that has the county communication center on it about 3 miles away, and the Santa Teresa hills to the east. It does pretty well :)

But you're right, the hand packs are hard to hear. I've picked up traffic from as far away as the Arena downtown, but that was pretty spotty and probably a fluke.

hey! lots you can do with a 5 element beam. and almaden valley isn't all
that bad especially if you're next to the mouth of it like you are. are
you even luckier to be on the southwest side of the mouth on the hillside?

and i wouldn't call getting traffic from the arena that much of a fluke.
another 30 feet or more and you probably would have had even better luck.

years ago i had multiple antennas on an 80 foot tower tied into multiple
radios and scanners. life was good... but that was morgan hill.

Date: 2005-04-05 04:43:05 UTC
From: Gordon Arnold
Topic: 38591 Message: 38591

I got my Pro-2096. Unfortunately I don't have time to devour the manual as I would like. This is both my first trunking and digital scanner... I just didn't have need for that stuff five years ago when I left LA since LAPD and all the other cities hadn't turned the P25 switch yet and I radios to monitor any trunking systems that were relevant.

I would REALLY appreciate it if those who are familiar with this scanner would drop their hints and tips to a poor beginner. Gosh, I haven't felt that way about radio in, well, ever. Trunking radios make sense, trunking scanners don't (yet, to me).

Also, I hope this wasn't a mistake on my part... I thought this thing was computer programmable (there's a "PC/IF" port on the front) but no mention is made of PC programming in my quick skim of the manual... what do I need to order and where do I get it?

Thanks in advance.
Gordon

Grab a programming cable off of Ebay. I use the same one for Pro83, Pro95
and Pro96/2096
It was cheap and works well. Radio Shack employees are the reason they
make velcro shoes. Most
will order the wrong part.

Next, grab the low-cost great software by Don Starr
http://www.starrsoft.com/software/win96/default.asp

It works on Pro96 and 2096.

Depending on where you live, joing one of the YahooGroups Pro96 groups and
download a .p96 file for your area.

Start listening. Tweak the file to your liking.

Enjoy.

I suggest you take the topic to
http://groups.yahoo.com/group/RS_GRE-Digital-Scanner/ ,
which is where the "experts" hang out.
If you need .p96 files, then bayscan would be the place to request them,
especially the San Mateo split system.

I'll ditto using win96. Programming the Pro-96 (or your mobile version)
is a real pain by hand.

Incidentally, there is a thread on the RS_GRE group about the 2096 being
very hot, i.e. some people have to use the attenuator to get it to work.

I listened to the last hour or so of the barricade incident on Ch. 17.
It was all in the clear, with a very detailed blow-by-blow description
of the scene and what was happening. Very professional as well.

I wish the 796/296D had an option to mute the audio when P25 is
encrypted--it sounds like a slot machine or video game :)

Not quite. Wish I was though--not for the radio propagation but for the
real estate value!

GPS shows me about 250 ft. above sea level; most of San Jose is at about
50-100 ft. ASL, so I have a small advantage.

> years ago i had multiple antennas on an 80 foot tower tied into multiple

One quick tip - the Pro-96 REQUIRES you to use the software to program multiple table entry trunk systems like San Mateo and Marin (can't do it manually from the radio keyboard). I'm pretty sure the 2096 is the same.

That's what I meant by a split system, however I think you can do one split from the keyboard. Win96 lets you do six splits if I am interpreting the extended table correctly. Even if you enter data in the extended table, you need to also select that you want to use the custom table. I consider it a bug in the software, or a poor user interface. Win96 also enables the radio to receive mil air.

Picking up strong signal on 454.875 in Sunnyvale. Sounds like someone keying up and holding down a DTMF button, It drops for a half a second every so often, and there is a morse ID sent at intervals too. There doesn't appear to be a repeater tail when it drops.

Anyone knows what the purpose of this is? Been going since at least last night, maybe longer (I just decided to scan the 450's last night).

Evan

Yep, that's the ground-to-air uplink channel, with a constant "pilot" tone.

The downlink is +5 MHz; you'll occasionally hear people on in-bound passenger jets into San Jose airport on this frequency. You know, those little phones in the back of the headrest that cost so much.

I think this is an old system without much use anymore.

Not necessarily.

The upper 454's were used heavily for air-ground mobile phone through the 80's and early 90's. By the late 90's, Hughes had installed most of the 900MHz AirFone system that still can be found on some planes. I admit I haven't seen many of them lately, but I only hop on a plane about once a year at best. To top it off, supposedly the system was AM and the voice quality left quite a bit to be desired. I saw several of the Hughes systems in building top or mountain co-lo comm sites I visited in 99 and 2000 while a cell tech.

A lot of the 454.xxxx air to ground channels are no longer used for the service, and I think may be totally extinct at this point. The FCC opened up licensing for the old air-ground phone channels several years back. Since then, I've only heard one particular system using them, and it sounds just like what you heard and described with the constant DTMF tone. The sites are some sort of long-range PTT / phone patch dispatching system that I've found in multiple western states (CA, OR, WA, NV, AZ). I have reports that a dispatcher can be brought on-line by hitting a sequence of DTMF characters or a PBX can be accessed through the system with the capability of dialing-out. If it's air-ground phone, it sure works a little too well in the terrestrial realm. If you're travelling, try dialing around from 454.775 up to 454.975. Most activity from this system I've heard in the more rural areas, and the only real active channels my friend and I have found (he lives in AZ) are 800, 825, 850, 875 and 900.

Sorry, didn't update the channel, they switched to channel 57 on comcast which is "headline news," they were using feeds from KTTV, KABC, KCOP and one other. The skies must have been full of helos. As another poster mentioned. KTTV had an earlier pursuit televised of a loc-jack hit and chase of a stolen car in S. Cal which ended up with footbail and the 2 perps in custody.

its code 4 , some town near the Orange/San Diego County border off Interstate 5 .....and HOW poetic is this.....at a DONUT WORLD (let the jokes begin.....sorry Chris and Mike, I had to post this, LOL)

This was one of the more fun pursuits to view, this turkey ranged from 25 mph to 128 , he actually, at one point, was sitting on the drivers door waving at the helos, his foot off the pedal and he slowed almost to a stop before sliding back inside and picking up speed.

Looks like they put the "wrap" on him after he walked into the donut world ,,,,,,,maybe after ordering a couple glazed!

(Guess he doesn't know donuts have NO nutritional value and are bad for your health !).

Ah, the good old LA pursuits. I spent many an hour glued to the TV watching them, armchair-quarterbacking the pursuit with others in the field... :)

I also remember one time I heard a pursuit go WB210 from the 605... one of the 3 police choppers involved did a poll on "oh-two" then switched to BUR tower and cleared a "flight of 13" through their airspace. That's a lot of media helos. :-o

On some channels, such as where I work, you can see some interesting interactions where agencies co-exist on the radio.

On the San Mateo primary, K("king") units are detectives, with the interesting exception of K1 and K6, which are Brisbane canine units (Brisbane contracts with San Mateo for dispatch services). San Mateo sergeants are "sam" units, with Brisbane having "william" (watch commander) designations.

Don't know exactly what's happening either but the CG declared a maritime safety zone around the search area, which is is the vicinity of the Bay Bridge. Maybe because of the container ship traffic through there but it's pretty unusual for the CG to use this tactic for a person in the water search.

Here is what that activity was about in the bay last night:

Search for Tugboat Operator After Dredging Accident

Apr 6, 2005 10:35 am US/Pacific

Search crews were combing the waters off the Port of Oakland Wednesday morning for signs of a tugboat operator who disappeared after his boat sank Tuesday night.

The tugboat was working on a dredging job when it sank just after 8pm with two men aboard. One man was rescued by a nearby barge, but the tugboat operator was still missing Wednesday.

The vessel apparently flipped over as they tried to pull an anchor out of the water.

Two Coast Guard boats and a helicopter were part of the search crew Wednesday. The tugboat company also brought in private divers to look for the operator.

I am sure it is still good, their copter may not be flying (they're somewhat expensive, $500K/year). It seems like other media Part 90 freq which can be quite busy and other days no traffic. There is the newsvans but maybe they are using cellphones.

38635. question about making forced entry

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-08 00:33:09 UTC
From: jim gammon
Topic: 38635 Message: 38635

I would be interested to hear people's comments about situations where officers have to make a forced entry in to a residence. Under what conditions is this done other than for medical reasons where a person is unable to answer the door? I heard a situation earlier today where CoCo SO had to enter a house where they ended up taking four people in to custody. The people didn't wantt to answer the door after repeated attempts at knocking and calling two phones in the house. I am not sure finally if they were persuaded to answer or if the SO made forced entry. If they actually had to break the door or a window to enter, who would pay for repairs, the home owner, landlord, or the police agency who entered? Just curious about this. My bet would be that responsibility would be with the home owner or landlord. Do any of you have any direct experience with similar situations? Thanks.

Considering its size , seems like Fresno may have more gang-shootings per capita than any other California city. Don't have stats , but I get IPN pages about shootings in Fresno all the time.

Hopefully one of our resident Peace officers on this list will answer ,
but if it is NOT medical , I would think they must have probable cause to enter.
Such as in hot pursuit or a warrant. I strongly doubt the PD would pay for
it.

I know in livermore any property damage such as a door knocked down, the resident can put a request in to the city to be reimbursed. ie. knocking down the wrong door.

Hi Ed. this was an interesting situation where a stollen vehicle was involved and I don't know what else. One of the Perp's lived at the residence I think.
Pretty strange deal the way it came down and I didn't hear if they actually arrested the four people, but it seemed likely they did.

last i heard the gang task force between chp, fresno pd and the county sheriff had been dismantled some time ago, leaving only the 3-way repeater links between the agencies operational.

when they started the 3-way years ago, the first night of the task force going active was quite successful from what i understand. not a shot was fired that night by the cops or the gangs. sounds like it's time to put the task force back together.

There appears to be some sort of situation sounds like it could be a hold situation. The city is unknown however; it is on channel 155.190, which is the Sheriff department. The street involved is San Bernardino street. They said all h and t units 97 and appear there setting up a command post. There has also been talk of a light going on and off inside the residence. It sounds like they are outside communicating with a subject inside the residence. They are also talking about a ladder being needed. They are now talking about entering to find a breaker box??? 9:14 pm

I believe that if they have probable cause to make entry and do so forcibly the liability lies with the person responsible for the property however it is possible to file a claim with the city, county, state, or federal government.

Could be wrong, though.

38656. Re: question about making forced entry

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-08 07:47:10 UTC
From: ofc53
Topic: 38635 Message: 38656

"Fresh pursuit" of a suspect would allow you to force entry (foot pursuit...chasing the guy into his house). "Exigent circumstances" (ie fire, medical, emergency need) also lets you break down doors or windows to get inside. Yet another way is with a search warrant. This is where officers present their probable cause reasons to a judge as to why they believe evidence of a crime (or the person they are looking for) would be in the residence. Steps need to be taken to insure they have the right house and that the person is reasonably believed to be in the house. Of course, the first option is to knock but once a certain amount of time has passed, officers are allowed to break down the door.

As for paying for the door, I know people can submit a claim with the city but unless it was a mistake (ie wrong house) I wouldn't imagine the city would pay for it.

Hope that helps.

38659. How do EMS/Ambulance runs work in bay area?

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-08 14:29:29 UTC
From: b52hbuff2001
Topic: 38659 Message: 38659

I am curious after returning from RTP and hearing how another region does things. In retrospect, there was probably more EMS activity because they dispatch EMS instead of fire. But in their system, EMS were dispatched and EMS would report patient status on the same frequency/TGID.

So let's walk through a dispatch in the Bay Area/Santa Clara County. The initial call is dispatched on the appropriate FD dispatch. FD shows up and stabilizes patient. Then AMR/WestMed is dispatched? (but on what frequency?) And what frequency is used to report patient status.

I have listened to the SCC 'EMS' frequencies listed Kelty's 'green book', but there doesn't seem to be the level of activity I'd expect for the size of the area.

So what's the deal? Is it Nextel? Cell phones??

>So let's walk through a dispatch in the Bay Area/Santa Clara County.
>The initial call is dispatched on the appropriate FD dispatch. FD
>shows up and stabilizes patient. Then AMR/WestMed is dispatched?

Generally AMR is dispatched at the same time fire is. Often first. It depends on the PSAP that handled the call. If the 911 call went to County, and County dispatches the AMR units, and has to transfer to say Sunnyvale Fire, AMR would get dispatched first. In Santa Clara County at least, WestMed isn't authorized to run '911' calls. The only rig you'll see on a 911 call is AMR.

>(but on what frequency?)

856.4375 - Med91. 'Repeated' on a UHF channel, 453.100, but only dispatch is repeated there, you won't hear the mobile units. You'll also hear the two-tone toneouts for the units.

>And what frequency is used to report patient status.

Nextel for code 2 ringdowns, Med-92 (857.4375) for code 3.

>I have listened to the SCC 'EMS' frequencies listed Kelty's 'green

Here in San Jose, Fire and AMR both get dispatched at roughly the same time. The 911 response will create an event in both their systems; however, they have separate dispatchers and frequencies. AMR will get dispatched on MED 91. This is fairly busy.

Usually FD arrives on scene first (not always). There is not a report of patient status. However, if the incident is a result of a traffic collision, or their is someone trapped, you'll sometimes hear an update to fire dispatch if their needs to be additional units sent (rescue response, mass casualties, etc.) Sometimes you'll hear a FD unit ask the dispatcher to advise incoming AMR units on what they are dealing with or where to go.

Once the patients are being transported by AMR, patient updates ("ring downs") occur either via cell phone or on MED 92. The policy changed about a year ago to shift to cell phones, but the old radio system is still on standby and gets occasional use for "code 3" transports.

I used to listen to this stuff; after a while it gets very depressing.

In addition to Evan's answer. Palo Alto Fire has been running their own Paramedics for a good 30 years. They use AMR as a back-up if they are busy. They also have BLS-1 which does transfers which of course they make extra money for the PAFD budget.

San Jose Fire has STAR Cars (Rescue-Medics 4, 18 , 29 Med 22 and Med 31) these units do transport when AMR has extended ETA's

Ahh yes, Palo Alto Med Units..

Gosh, must be 7+ years ago, doing a ridealong with Medic 2 out of page mill for a video I was doing for them at the time... They were having the station quarters redone, so the crew slept in trailers in the back. I slept in the dayroom. 2 AM ish, bells and lights go off. I jump into the ambulance and wait... And wait... Then I start hearing a faint knocking. Get out of rig, run back to dayroom - crew accidentally locked themselves out of the station. :)

Ahh the good old days.

Evan

This just ended I'm afraid at the Marin/Sonoma county line. Suspect was driving a Mercury in excess of 120 mph. I picked it up around Rowland Blvd in Marin. He took the exit, then got back on the freeway. Officers reported heavy smoke was coming from the vehicle and the pursuit gradually slowed more and more probably for that reason. Then the suspect started pointing a metallic object out the window (officers couldn't tell whether it was a gun or a cell phone) and they laid back. Then he ran over a spike strip set by the Santa Rosa CHP units, and they got him at gunpoint outside his car right on the county line. That was about ten minutes ago and it's 20:14 PDT now.

Freq was CHP Violet 42.16 and probably the Emerald on 42.88/42.20, but I couldn't hear them from here in Marin unfortunately.

Thanks Craig - I'm a Fire Captain at the NASA Ames Fire Department - formerly know as the Moffett Field Fire Department (although our o.e.s. designator is still MOF!).

Now for the proper credits: the F-14 photos we're taken by Captain Steve Epperson (he's the guy in the last photo) using Firefighter Dan Nguyen's Sony Cybershot 4 megapixle camera.

you can also check out other department photos at:

38675. OT - Proposal to rename Mount Diablo "Mount Kawukum"

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-10 00:26:58 UTC
From: Don Root
Topic: 38675 Message: 38675

The Department of the Interior's U.S. Board on Geographic Names has received a proposal that Mount Diablo be officially renamed to "Mount Kawukum" on Federal maps and publications. The proponent feels the existing name is derogatory. The Board is requesting public comment on the proposal.

U. S. Board on Geographic Names website:
http://geonames.usgs.gov/bgn.html

Minutes of February 5, 2005 meeting where proposal reported:
http://geonames.usgs.gov/DNCFeb05Minutes.pdf

BGN Docket 388:
http://geonames.usgs.gov/Docket388.pdf

----- Original Message -----
From: "Jennifer E Runyon" <jrunyon@...>
Sent: Friday, April 08, 2005 8:55 AM
Subject: Geographic Name Proposal: Renaming Mount Diablo?

To: various "Mount Diablo" organizations:

Dear Representative:

This is in reference to a proposal that the U.S. Board on Geographic Names has received, to change officially the name of Mount Diablo in Contra Costa County. As you may know, the Board is responsible by law for standardizing geographic names for use by the Federal government, and its members must approve any new name or name change before it can appear on Federal maps and products. Because local acceptance of any proposed name is very important to the Board, we would be interested to receive the opinion of your organization regarding this proposal. We have also asked the Contra Costa County Board of Supervisors and the California Advisory Committee on Geographic Names (CACGN) to comment on the issue.

The proposal to rename Mount Diablo was submitted to us by a resident of Oakley, who believes the existing name is derogatory. He has suggested the summit be renamed to Mount Kawukum, a name of indigenous origin that reportedly means, ?laughing mountain, everywhere seen.? (We should note that the proponent also suggested the summit might be renamed for the late President Reagan, but we have informed him that the U.S. Board cannot accept that name, as its Commemorative Naming Policy requires that the honoree of any new name for a natural geographic feature must have been deceased for at least five years).

To view a synopsis of this proposal, please visit our website at http://geonames.usgs.gov/Docket388.pdf (scroll down to the section on California). Please submit comments to the address, fax number, or e-mail address provided below. Also, please include an explanation as to the reason for your recommendation, regardless whether negative or positive.

We encouarge you to distribute this e-mail to other groups or individuals who might wish to comment.

As soon as our research is complete and all interested parties have had an opportunity to comment, we shall present the proposal to rename Mount Diablo to the U.S. Board for discussion and a decision. Thank you for your assistance in this matter and we look forward to hearing from you. If you have any questions, please let us know.

Sincerely yours,
Jennifer Runyon, research staff

Well as it says in the third paragraph,

>>Please submit comments to the address, fax number, or
>>e-mail address provided below. Also, please include an explanation as
>>to the reason for your recommendation, regardless whether negative or
>>positive.

>>E-mail: jrunyon@... or BGNEXEC@...

You might read the actual text in the Docket, and note the extensive
impact on other products. I also suggest you reference Docket 388 in
your remarks or e-mail subject line.

Don

38680. Golden Gate Bridge Toll Plaza - SHOTS FIRED -

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-10 04:36:13 UTC
From: inigo4688
Topic: 38680 Message: 38680

Suspect was driving a 10851 vehicle and shot a toll taker at the golden gate bridge. Then apparently the CHP shot him. Second subject BMA running down towards the Presideo or Ft. Point PD in pursuit. Everyone's on this:

CHP Violet and Pink
GGNRA Park Police
GGNRA Presideo Fire is responding for the toll taker who's been shot
San Francisco Police Department
San Francisco Fire might also be responding I can't tell from here

Some serious sh*t going down though on the bridge right now.

I heard this happen too, and the first I heard was on the GG Bridge Ops Channel [482.7375] and all the traffic there seems familiar with the Sgt. who was the officer involved -- didn't sound like it was CHP.

Subject: [bayscan] Golden Gate Bridge Toll Plaza - SHOTS FIRED -

Suspect was driving a 10851 vehicle and shot a toll taker at the golden
gate bridge. Then apparently the CHP shot him. Second subject BMA
running down towards the Presideo or Ft. Point PD in pursuit.
Everyone's on this:

CHP Violet and Pink
GGNRA Park Police
GGNRA Presideo Fire is responding for the toll taker who's been shot
San Francisco Police Department
San Francisco Fire might also be responding I can't tell from here

Some serious sh*t going down though on the bridge right now.

i would guess, but i didn't hear that this was the start of it. the
crime scene now is basically the lane 7 booth. i heard that sfpd has
taken over the investigation.

Just an update for you guys:

Jordan - You're right the Golden Gate Bridge District PD officer shot the subject. I heard Park PD running right behind him yelling "We shot him! We shot him!."

Nina - I have no idea where the 10851 originated and I didn't even hear the officers talking about it or sounding concerned about it at the time. They were mainly concerned with getting the female toll taker to SF General Hospital. Afterwards I turned it off since it was a little depressing not knowing the status of the victim and the suspect. KRON 4 has been providing excellent coverage tonight. She's stable as of now.

I can tell you the car was travelling southbound from Marin through the toll plaza, when the suspect randomly got out of his car and shot the toll taker.

I don't get the impression from the media coverage I'm seeing down here in L.A. that anybody was pursuing the 10851 vehicle, which sounds like the idea behind Nina's question. It sounds like the fact the car was stolen may have come out in the investigation after the shooting. From what I understand, the bad guy stopped at the toll booth, got into a 415 with toll taker, then shot her. :-\

Then bad guy fall down go boom. :-) No wait, I think this one would be: cop go boom THEN bad guy fall down. :-D

Hey ED & everyone else, sorry to post ten bazillion times but I may as well add the other freqs that were part of this incident:

Golden Gate Bridge District Police - 482.7375 PL 173.8
CHP "Violet" Marin Office (34 units) - 42.16 (mobile 42.34 but it was repeated tonight)
CHP "Pink" San Francisco Office (32 units) - 42.44/42.76 mobile (also repeated tonight from the few bits I heard)

In addition to the SFPD Channels you gave and the park pd stuff I provided in the last one. Marin County SO could have headed down as well from Marin City, I missed it if they did. Their dispatch is "Control 1" on 39.24 simplex with receiver voting (so you don't hear dispatch if they're talking to someone far away, unless I'm misunderstanding how it works).

Here is the latest off the net. I was getting into my car and had just turned on the scanners when the action started. Im at the Marin City off so I could hear sirens in every direction, CHP, Marin SO, Park Police, etc.

Toll Collector Gunned Down On Golden Gate Bridge

POSTED: 10:51 pm PDT April 9, 2005

SAN FRANCISCO -- A female toll collector was shot Saturday night after an argument with a motorist on the busy Golden Gate Bridge.

Bridge spokeswoman Mary Currie said the unidentified toll collector was shot by a motorist who had exited her car in toll lane 7 apparently after arguing with the worker.

The motorist fled south on foot toward San Francisco, pursued by Golden Gate Bridge police. He was shot in the leg and taken into custody, according to Officer Mark Johnston of the California Highway Patrol.

The motorist was driving a stolen car, said Johnston.

The suspect and toll worker were both taken to San Francisco General Hospital. The toll collector's injury was serious, said Johnston. But Currie said it was not believed to be life-threatening.

38696. SCC EMS dispatch on BAYMACS

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-10 17:19:07 UTC
From: Johnathan Corgan
Topic: 38696 Message: 38696

I'm hearing this morning traffic that would normally be on MED 91
(856.4375) instead being handled on BAYMACS, which is simulcast on at
least three frequencies:

460.0250 (SJPD 10)
482.3375
867.5125

I thought BAYMACS was also on a VHF HI band but I can't seem to dig up
the frequency right now.

Anyway, it's normal dispatch traffic for Santa Clara County EMS, there
doesn't seem to be a drill or other event which would require BAYMACS.

Maybe MED 91 is down?

I *thought* that was it--it's in the scan bank but wasn't getting any
traffic when other BAYMACS frequencies were active, so then I wasn't
sure. Wonder why it wasn't linked?

These are low power, "interstitial" allocations, used for things like fast food drive-thrus.

The license, WQLC511, shows a maximum power of 2 watts for these, for up to 12 mobile only transmitters.

There is another license, WPGT828, also for Southwest, with the exact same location and frequencies, but goes back to 1998 and in one case 1995.

Maybe Southwest gate agents are getting headsets like the Old Navy clothing stores :-)

> What happened to "don't shoot unless you mean to kill?"

I think it went out a long time ago. It's more like "shoot to stop the fight" (which usually means two to the thorasic cavity), which when a felon is fleeing isn't exactly a fight ... but "shoot to kill" is murder. You might be thinking "don't point it at anything you aren't prepared to destroy" but that's something else.

Also: it was dark, and under stress you're only at best half as good as you are on the range? I'd say: cut the guy some slack, he's in a world of hate right now until he's cleared.

Also, an SFPD commander (captain, I think) said in an interview that everyone was running at the time. From how it sounds, the officer (security guard, as was said in that same newscast) was lucky to hit anything.

I am trying to figure just what position the "officer " who shot the perp is. Some say he is a Golden Gate Bridge Police Officer, I didn't know they had Police Officers although it makes sense considering the amount of money being collected there to have an armed officer around. I would be surprised if he is a security guard.

Hey ED..

I happened to see this event in person just after it happened. I didn't see any of the shooting but I was stuck mid span of the bridge and saw ever cop in town pass me. By the time I was able to drive past the scene there was nothing much to see accept tons of crime scene tape and cops everywhere.

As for the officer who shoot, I actually looked into applying for that position just after i graduated the Police academy, since I live so close to the bridge. They are officially called "Bridge Patrol". They have brand new crown vics with the LED light bars and are fully armed just as any other cop.. They are security for the bridge however i see them backing up CHP on traffic stops in the surrounding areas. They have all the same powers as any California Peace officer however they don't really do much proactive policing because they want them on the bridge as much as possible. I believe it was more cost effective to have 2 full time officers then to pay CHP over time for 4 officers watching the bridge. Now I only see two CHP (one on either side of the bridge). As we all know I'm sure, they replaced the National Guard after 9-11. This shooting is probability the most action the bridge patrol has ever seen. I believe Bridge Patrol as been around for a little over a year now.

Hope that helps out a little.

-BC

ah ,,,,,,,,,,,,,,,thanks .....so they ARE 832 certified. I figured with the money , they certainly can afford a peace officer over a security officer , especially since the requirements/ training etc etc is so much better . Plus they have , as you mention , full P.O. powers

My one "sniffle" is the darn bridges (all of them) charge me extra for the " little" trailer I pull behind my Wing.....that makes the GGB charge 7.50 ;-(Yet , If I drive a company truck such as a bobtail with a couple tons of newspaper , its 5 bucks because it has two axles and with my bike + the trailer it counts as a third axle .....life isn't fair LOL

38717. New File Uploaded To Bayscan: Marin County Sheriff beat map

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-11 09:40:13 UTC
From: inigo4688
Topic: 38717 Message: 38717

Hey guys,

I got bored so I figured out the Marin County Sheriff's beats by listening to traffic stops and logging locations and unit IDs. I got even more bored and made a map for it. :)

The first number is the sub-station, the second number is the beat. Ex: 21 is the Kentfield sub-station, beat 1. That unit's ID on the radio would be "1Q21" or "1Z21", depending on the shift. The first number, 1, stands for what district the PD is. 1 is the Sheriff. The letter stands for what shift it is - Q is day shift, Z is night shift. And the second set of numbers are the sub-station and beat.

Not pictured are the three sergeants. They use the letter X in the unit ID (instead of Q or Z). They are 1x10, 1x30 and 1x40, and there is one per station available at any given time (as far as I can tell, Kentfield seems to not have one that I've heard). x40 rarely ever leaves the station, but x10 and x30 are out and about all the time.

That's all, may you be well informed next time you listen to Marin County Sheriff. 39.24 MHz PL 82.5, patched to MERA TG 45616.

Bridge patrol officers are merely certified security guards who have passed PC 832. They are not peace officers as defined in section 830 of the Penal Code. PC 832 is just a 40 hour course on the firearms and laws of arrest. They have no peace officer powers whatsoever. You can see the job description at http://goldengate.org/organization/c/jobs/documents/BridgePatrolOfficer.pdf . They can drive code 3 equipped vehicles because of the CVC section that allows vehicles equipped to respond to medical or traffic emergencies on the bridge to be code 3 equipped. That's why you also see red lights and sirens on the tow trucks.

The security guard who shot the suspect did what any citizen would be allowed to do - shoot a fleeing felon. I agree he did a good job to even get him in the leg considering the circumstances.

I am not familiar with the 452/457 freqs, but 463.7125 (repeats 468.7125) PL D132 has been used by Southwest at SJC for many years. Connects the gate agent, ticket counter, baggage, etc., in Terminal A. These interstitial freqs are lower power, and are used by lots of businesses where extended range is not needed. Looks like a simple license update since the old one (WPGT828) expired on 3/10/05. BTW 131.700 (AM) is the operations frequency for Southwest at SJC when talking to their company planes in the local area.

I hope nobody thinks I was criticizing the officer... I wasn't there and don't know the exact circumstance so I'm in no position to do so. My armchair-quarterbacking was speculation as to why he didn't STK a bad guy who had already shot an unarmed toll collector and was clearly still a threat to everyone around. The conditions and circumstance certainly explain it.

BTW, doesn't "murder" require premeditation? I wouldn't call it anything other than justifiable homicide (had the officer killed the bad guy).

this has been on the news , some guy saw a big splash , called 911 and divers have confirmed there is a car in about 30' of water . So far no victims and they were getting ready to have a tow pull the car out of the water. They seem to think maybe its someone dumping a stolen car or a car involved in some other crime into the lake to hide evidence. SJFD cancelled 2 or the 3 USARs rolling and the S/O divers were used , they are considering it a crime scene.

He may very well have been aiming at " body mass" i.e. the chest/back area.Trying to shoot someone in the leg is quite difficult and I doubt taught..... he simply hit the guy lower than he was aiming is my guess

Considering at least one of them (the perp) was running and maybe even both of them, he did hit the guy and stop him, good job on that. I don't understand why the perp abandoned his vehicle , why didn't he drive off and dump the vehicle a little bit later ? but then criminals are never known for their brains.

I am not an attorney or a cop, but I don't believe there would be justification to shoot to kill. I believe it's the actions of the perp at that moment that determine the police officers reactions.

Let's say that I had just killed someone. Police officers show up. I put the gun down, hands in the air. If I were shot lethally, I don't think the officer could justify that. If I started aiming my gun at officers, there may be STK justification.

On the other hand, if I just killed someone, and I'm on the run, but not pointing my gun in a threatening manner, I don't believe there's the STK justification there.

>BTW, doesn't "murder" require premeditation? I wouldn't call it anything
>other than justifiable homicide (had the officer killed the bad guy).

I believe the legal term murder requires premeditation, however I think all rules go out the door for police officers - unless of course it can be proved the cop woke up in the morning thinking "Man, I haven't pulled my gun in my 10 years of being a cop. Today's going to be the day. And I think I'll kill someone while I'm at it."

See Penal Code section 187-193 for the definition of murder and manslaughter. Murder or manslaughter is the unlawful taking of life. PC Section 837 defines a private person's right to make arrests. This would include a bridge patrol officer. PC section 197 covers justifiable homicide by a private person. PC section 197(4) covers using deadly force to take into custody a fleeing felon.

Just as a point of interest, California allows a private person every right of arrest granted to a peace officer with the sole exception of arresting a person on a warrant.

38734. Car in Lake - Mercury News Story

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-11 19:26:44 UTC
From: Craig Rose
Topic: 38734 Message: 38734

Found this on the Mercury News website:

Body found in car that plunged into Almaden Lake in SJ

Mercury News

San Jose police pulled a car from Almaden Lake Park this morning and found the body of a man in the driver's seat.

Sgt. Nick Muyo said police received a call at 8:30 a.m. from a driver who said he saw a four-door sedan entering the South San Jose lake with a splash. The driver went into the park and could see bubbles in the water. He called 911.

Two divers from the Santa Clara Sheriff's Department were dispatched to the scene, at the east end of the lake opposite Almaden Expressway. They found the car upside down at a depth of about 30 feet.

Muyo said the divers were able to get a door partially open, but the water was so murky that they could not determine if there was anybody inside.

When the the car was pulled from the water at 11:20, the found what police describe as an elderly man in the driver's seat. Muyo said there was no sign of foul play.

38735. More GG Bridge Shooting Information

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-11 19:54:38 UTC
From: Jim Cooke
Topic: 38735 Message: 38735

I just got off the phone with my source at the GG Bridge. The person in the stolen car attempted to holdup the tolltaker. When she didn't give him the money fast enough, he shot her. She had already pressed the 211 alarm button so a bridge sergeant and patrol officer were exiting the bridge office. The suspect's car stalled and wouldn't start so he abandoned the car in the toll lane. He fired at least one shot at the bridge officers as they approached him. The suspect then fled into the bridge office parking lot where he was shot by the patrol officer after refusing to stop. The suspect was already in custody before other police agencies arrived on scene but the CHP, SFPD and US Park Police searched the area for some time because it was initially thought there was a second suspect.

The tolltaker is doing well in the hospital and is expected to be released in a few days.

In answer to the question about how long there has been a bridge patrol, it has been in existence, at least with marked units, since 1982. The first marked unit the bridge got was a 1982 police package Dodge Diplomat similar to the CHP units at the time. A second marked unit was added in 1987. Patrols were conducted by the bridge sergeants who were the only armed officers at the time. After 9/11, the bridge established a security and patrol division and started hiring armed patrol officers. The bridge now has five marked units and one unmarked unit along with 18 patrol officers and 6 sergeants.

Regards, Jim

Powers of arrest are different for peace officers and private persons in several areas. I invite you to compare and contrast the differences of 836 PC(peace officer) and 837 PC (private person) for yourself at _http://www.leginfo.ca.gov/_ (http://www.leginfo.ca.gov/) . In addition, case law has proven
great differences in the powers of arrest and use of force regarding private persons and peace officers.

Ranking Golden Gate Bridge District Toll Sergeants, Lieutenants, etc are sworn peace officers. The do not collect money at toll booths but supervise security and operations from the toll center office.

We are straying off-topic again but I'll just say that I'm well aware of PC 836 and 837. The basic difference in arrest powers is that a peace officer can arrest on a warrant and a private person can't. I'm not aware of any case law that changes that. There's certainly case law that differentiates the use of force by private persons and peace officers but the use of force during a felony in progress is something that's no different between a peace officer and a private person. Both have to be prepared to prove that the level of force applied was that needed to stop the felon and take him into custody.

Do you have a source for this assertion? My contact at the GG Bridge tells me they are considered security guards by law and are not sworn peace officers. These postions are also not listed in the Penal Code as peace officers.

Can someone help me to program the National Park Service system for the Golden Gate National Recreation Area into my Pro-2096? I followed the instructions in the manual as best I could understand them using the information from RadioReference.com (http://www.radioreference.com/modules.php?name=TRSDB&sid=349) and while I can hear the control channel on manual and am in "open" mode when scanning I am not hearing any talkgroups. I ordered the cable... I'm just eager to get started. Though I'm familiar with programming trunking radios this is my first trunking scanner. I wonder if the problem is the blank offset information in the RadioReference.com is the problem.

Thanks in advance.

It's 100 times easier from win96. Just wait for the cable to arrive.
Remember to tell the program to use the custom table that you entered.
It's a bug in the software.

There's no bug in the software although I agree it's much easier program the 96/2096 using Win 96. If you follow the directions on programming UHF trunking systems, the only thing you have to change is the base frequency, which should be 413.000 mHz rather than the standard 380 mHz that's shown when you hit FUNC + 2 to enter the data. All the rest of the data (Offset of 380 and Spacing of 25kHz) is correct and can be left unchanged. The RR database doesn't really make this clear.

Assuming you entered the correct base frequency already and still aren't hearing anything, just listen a while longer. The GGNRA system can be very quiet, especially at night.

Regards, Jim

Air rescue 'dummy' drops in on golf links

NATIONAL GUARD CREW MISSES MOFFETT FIELD

By Elise Ackerman

Mercury News

The good news is the Air National Guard pilot scored a hole-in-one at the Sunnyvale Municipal Golf Course.

The bad news is he was aiming for a drop zone in Moffett Field, on the other side of Highway 101.

About half a dozen golfers were gathered around the 16th hole about 12:45 p.m. Monday when an orange duffel bag arced out of the back of an MC-130 transport plane 750 feet overhead.

``It landed in the fairway, which is pretty much the middle of the hole,'' said Tyler Cripe, assistant manager of the golf course.

Cripe said the 30-pound bag did not hit any golfers.

Lt. Toni Gray, spokeswoman for the 129th Rescue Wing California Air National Guard, said the pilot of the plane, which is modified for air rescue missions, had been practicing training drops all morning over Moffett Field, about a mile and a half away from the golf course. The exercise was meant to simulate the delivery of an inflatable raft during rescue; the duffel was stuffed with rags.

Gray said the crew was about 45 seconds away from Moffett, preparing to drop the duffel, when the wind shifted and scooped the bag out of the open bay.

The pilot was too surprised to yell ``Fore!'' but immediately radioed the base, which called the golf course.

Cripe said the bag didn't cause any damage, but the course isn't ready to give the pilot a mulligan the next time he flies over.

Bugs are in the eye of the beholder. A good gui design would first require the user to check the "custom table" radio box before allowing the data in the custom trunking table to be entered. As it stands now, you can change the data in the custom trucking table without instructing the radio to use that data.

The programmer has been informed of the bug, but doesn't consider it a bug. Yet new users constantly fall into this trap, so I consider it a bug.

<SNIP>

Gary,

I don't know what version of Win96 you're using but I'm using version 01.45 and I can't enter any data in the custom table fields unless I first select the "Custom Table" radio button. If you could enter custom table data in earlier version without first selecting the custom table button then I agree with you about a poor programming decision. It looks like it's fixed in the version I have so maybe you you have an older version and should download the current version.

Regards, Jim

That was it. The table was not selected. Thanks so much, Frank. I had stumbled onto that menu but not pressed UP or DOWN for fear of messing something up. I'm now hearing the NPS GGNRA as desired. Figures that cable would come today. ;-)

Odd thing... before I selected the table the scanner would stop, display a VC, but I would hear no audio... I think that was because it was going to the wrong frequency, correct?

fmonx <fmonx@...> wrote:

Do you have these settings PGM->TRUNK then FUNC + 2?
Base: 413.0000
Offset: ??? (nothing listed on your RR page) Try 380.
Step: 25.0 (listed as Spacing on your RR page)

Then have you set the table PGM->TRUNK then FUNC = 3? Press UP repeatedly until Table appears on line 4 then ENTER.

I'm not sure what a VC is, but as I stated in my other email if everything isn't programmed correctly, the scanner displays a TG but no audio only because the frequency isn't active. [If there is something on that channel, you would probably hear it, even if the channel has nothing to do with the trunk system.] I think it also may show the frequency or alternate between the two displays.

What is really annoying are those split systems. If you don't program it correctly, the scanner may work for only some frequencies.

Silly GRE with their irrelevant made up terms. :) And yes I own the Pro-96, I've got nothing but love for it.

Why listen with a trunking scanner if you're not going to use the trunking? I have no problem with listening to maintenance, the trouble is unless you memorize everyone's ID in the entire GGNRA (ex: Car 813, oh that's Park Police!), you're going to be scratching your head at some point wondering what the context of the conversation you're hearing is, because you don't know who it is that's talking. I encourage using the Pro-2096 to its full potential... I've heard some very candid conversations from the Park PD and Park Rangers on their Ch. 2 TG I wouldn't have known were them otherwise. :)

Well in theory you could try to hear the control channel, but I doubt it
will reach you. The transmitter site is nothing special, i.e. it's just
an antenna on a building, not one in the hills.

Charlie? ;)

It stand for 'Voice Channel'. I am pretty sure it is an analog Voice
Channel, and the P25 decoded channels are listed as DG or Dg depending
on whether DSP AGC is turned ON or Off. :)

http://www.starrsoft.com/software/win96/PRO-96Display.pdf

...is a great reference...

Topic: 38772 Message: 38772

Good afternoon...I was looking through various sites that listed the trunk frequencies for Alameda County and found that most all of them either listed the same frequencies or listed a couple more/less than the other sites. Is there a site that list the most up to date frequency information for Alameda County with trunk ID's?

Thanks,
Eddie Ragasa

Looks like he wants TGs too Ben ////////// ya want to list all
of them ?/ LOL I would try www.radioreferance.com

btw , BIG pothole , like 3-4 feet wide N/B 880 @ High st in Oakland , BIG
mess , Caltrans estimates repairs will take until at least
1500.....how much anyone wanna bet its more like 1800

CHP issued a Sigalert and big rigs can use 580 until its fixed.

From: John Beatty
Topic: 38780 Message: 38780

Here's some photos from the GGB comm. drill.
The black van is the National Guard Comm The rack mount units (with
the
pickup in the back)
are the ACS1000 units full of Astro Spectras and
plain Spectras. They are supposed to be portable,
but they are like the military definition of portable.
A 250 pound box with handles. It actually breaks down into
two units, but it's still quite heavy (my back still hurts)

ACS1000 doesn't seem to show up on the Moto website. What radios are in
the package?

Also, where was the other site with which you were communicating located.

http://www.jps.com/downloads/PDFS/acu1000app.pdf
Hmmh, it says easily transportable....

I can see why JPS doesn't bother making those low cost HAM antenna noise
cancelers or DSP boxes. The ACU-1000 looks like it costs megabucks.

The package in the photos runs about $40,000 to $45,000 before radios
are added.

Motorola Spectras and Astro Spectras were the radios.
Marin was tallking to S.F. and the Coasties.
Location was Marin; Bridge view area
to San Francisco; Parking area above Fort Point.

I recognized the observation parking lot near the bridge. I wondered if
there was a similar field exercise going on in San Francisco on the
other side of the bridge.

38794. scanner yagi antenna?

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-14 17:28:47 UTC
From: Eddie Ragasa
Topic: 38794 Message: 38794

I'm looking to see if a yagi antenna would improved my scanner reception. I live in Stockton and want to listen to Alameda County. If so, what is a good yagi antenna and where could I get one that does not cost a lot of money. Radio Shack does not seem to sell yagi antennas.

Thanks,
Eddie

That could be an expensive (in time and money) investigation, but I've had good luck with the Silver series from Antenex (their Gold series are supposed to be even better, so size your budget accordingly) ... try looking here:

http://www.antenex.com/c_search.asp?txtFunction=browse2&selFamily=YAG&txtSubFamily=SILVER+SERIES+800%2F900+MHz+MODELS

The gold antenex antennas are built like a tank. I don't know if they work any better, but you would assume they last longer. All the elements are welded, then the antenna gets gold anodized.

http://www.radiooutfitter.com/
Call for a price if you don't see the antenex product you want listed. They really undercut Scanners Unlimited on the 800Mhz yagi I bought for Oakland PD, even on a special order. Ben and I were doing email back and forth at the time regarding this antenna and he just didn't believe the price I got from radiooutfitter. No sales tax either.

If you don't hear the signal with a whip, the yagi probably won't do you any good, at least for NFM. In my case, I couldn't even hear Oakland until I got the Pro-96. The Unidens I had just didn't cut it. However, the signal using the RH77C wasn't strong enough to track well, but just an Antenex yagi on the bookshelf was good enough.

Yes. It's not the best circumstance, but better than nothing. I haven't
got around to putting it outside the house.

You still get gain if the antenna is in the house.

I didn't really want to go into it, but OPD really puts out a crappy signal to the north and south. It's better on the peninsula. You can do the drive from Milpitas to Berkeley and see the "fingers" where it works. I can get OPD from Tilden Park, but nothing from the hills of Las Trampas, so it probably has "fingers" to the east as well.

Hi all,,,
Are you saying that this particular antenna is that good? I live in Newark, with NO HILLS between my house and Oakland, and I can't get OPD at all! :(
I went to the links below, and it didn't have any sizes or anything. How large / small is it? The folks living around and behind me a very "picky."
Thanx!

check out the pics of the antenna on my site..

www.mattlogic.com
go to online scanners
then antenna pics...

The antenna is anywhere between 3 and 5 feet long depending on the 9 db
or 11db version. And yes they are that good.. Before my yagi's I could
only get 2 bars with no audio for s.f. now s.f. comes in clear

You can get the dimensions from the Antenex website. 800Mhz yagis are
reasonably small.

It depends where you live in Newark. I recall the signal was reasonable
near the Dumbarton. It also depends on the radio as I couldn't get it o
my Uniden scanners.

I really don't suggest buying a yagi if you can't hear the signal with a
duckie. It's doesn't have to come in well, but it should at least be there.

The next time you cruise the Nimitz, take a portable scanner and park it
on the CC. Heading south from Oakland, it will fade out then reappear,
then fade again. It's really a crappy trunk system that needs to be
replaced. If memory serves me right, it is the 1st or 2nd trunked PD
system in the bay area.

The smaller antenna (8066) is about 2.5 ft. The 80612 should be about 5 ft.

Ben more or less made my point that he at least had the signal before
getting the high gain antenna.

I KNOW I could get Oak if I put it outside , but I would need some help to set it up. I get Oakland with my 296 sitting in the window facing N/E but I would prefer to run it into the 796 . As I mentioned to Gary, maybe I could even get SF. my computer is in the kitchen in middle of the house and I can't stay on line 24/7 so at least I would have it in the living room watching the boob tube.....would sure be in improvement over the present situation.

Antennex is the best.

I have several of them. Both Gold and Silver.

They are also expensive.

But I've also had great luck with this one combined with LMR400.

And it's a HECK of a lot cheaper.

I use it in the deep south bay with a Spectra to pull in SF full
strength.

There was a pretty decent review of this at www.scannerbuff.net about
a week ago.

I think it was by BlackCat, but the antenna's are about the same.

Gary / Ben, and Group...
Thanks for your feedback. Oakland is a BIG ZERO on any type of reception. San Francisco, on the other hand, is intensely garbled and only in rare occasions can I fully understand transmissions. It's crazy, but driving on the Nimitz, from Oakland south, I can monitor Oakland all the way to Union Landing. (Union City @ Whipple.) I seriously need to get something for home though considering how much I monitor. OK, I'm out for now.....

I would think from Union City getting SF maybe a decent shot with a real good antenna since you only have water between you and its transmitters. That is the reason I get Oakland , nothing but water from the mid- peninsula to Oaktown

CHP HELO 32 is en route to the incident in the Alum Rock area of San Jose. The actual incident, whatever it was, happened near Stewart and Alum Rock and involved 40 individuals with reports of one person down. Santa Clara County Sheriff and San Jose PD unable to locate the victim at this time.

Working on 156.210

Last update pending any new developments.

Check out Ben's pictures from his site. I can tell you the yagis do make
a differents but the coax must be the best you can afford. Do not over
look the coax quality. I bought my yagi's from Ben and I pull SF,
Richmond, San Quintin and Santa Clara trunk systems. I live in south
Hayward near Union City (Union Landing).

You are within driving time of the Livermore Amateur Radio Klub (LARK)
monthly swap meet. Quite a few 800 MHz yagis and LP's show up there, and
at a fraction of their cost new.

See http://www.livermoreark.org/swap/swap.html

Topic: 38824 Message: 38824

The Capitol Theater Drive-In off of Hillcap Ave in
San Jose uses MURS #4 --154.570MHz-- for operations.
Comms were pretty mundane -- entrance booth #3 needs
more change, how much extra should we charge the dude
that wants a third enchilada & not just the normal
two, etc. but for a scanner-geek there watching a
movie, it could be interesting to hear what's going on
around you.

They also broadcast the audio from their 6 screens
onto the FM Broadcast band. 102.7MHz was the freq for
the movie I saw.

San Jose Fire working an incident with a subject suffering from a hydrogen burn to the leg. Engine 23 on scene requesting a structure response. Unknown situation with units to stage at Fortune at Lundy.

Engine 23 declaring this a HAZMAT INCIDENT at this time with Battalion 29 requesting a second Battalion Chief to respond. Placard is a 4/4/4 with ACID.

ENGINE 5
ENGINE 23
TRUCK COMPANY 29
BATTALION 29
HIT 29

This incident is working on San Jose Command 3 - 154.115 and is located at 1849 Fortune at Ringwood.

I am not absolutely sure what this business is, but it looks like a
semiconductor fab site - possibly Micrel Semiconductor.

ENGINE 29 is now on scene with MED 30 being dispatched.

IC requesting that staging be moved to Montague Expressway and Ringwood. Also requesting a second AMR rig for possible exposures - no symptoms at this time.

Clarification - IC requesting TRUCK 1 to provide the TIC. No need for the entire TRUCK COMPANY.

Side note about HIT 29 , besides hazardous incidents , the 4 man
unit goes to all greater alarms is usually hooks up with the Incident
Commander (IC) and is at his disposal for whatever he may need (manpower thing etc)
sometimes acts as staging officer .

38841. UA 49

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-16 19:54:45 UTC
From: Jordan Hayes
Topic: 38841 Message: 38841

UNITED 49 [767-300, SFO-OGG, departed SFO around 12:30] is up with ARINC on 131.95, getting some advice from company about an engine(?) flame-out. APU fault, too. They've tried a few times to restart, but no joy. No emergency declared yet ("We've got a little time"), but doesn't sound too good. Confirming that it's a required item for ETOPS, so they'll probably have to turn around.

12:49/PT

UA web site isn't showing a status change - yet.

Now on Oakland Center [ZOA] 134.15 asking for details of his turnaround.
I can barely hear him, but it sounds like he's determined that it will
not affect the flight, it's not an ETOPS requirement, so they are
pushing on. I guess that means it was the APU and not the engine that
flamed out :)

united.com says "NOT DEPARTED" ...

13:15/PT

Man, I hope he's right. TransPac on one lung isn't fun.

> united.com says "NOT DEPARTED" ...

Interesting; when you first posted, I followed the link for flight
status at united.com, and it is still showing "IN FLIGHT."

<http://www.ua2go.com/flifo/FlightDetail.do?airline=UA&fltNbr=49&orig=SFO&dest=OGG&date=20050416&stamp=null>
or http://snipurl.com/e23j

When I click on that link, it says NOT DEPARTED. Maybe you're looking
at an older version of the page?

UA49 just said "we'll see you on the ground shortly" and asked if everybody at SFO had "gotten everything ready" so I guess they're going back.

UA must be running a distributed web farm with some lag; I checked again
and now I'm getting NOT DEPARTED.

Oh well.

Just to follow-up, this drill includes multiple AMR units as well. For those listening, you'll note that the AMR units involved are using San Jose Fire frequencies.

San Jose PD is working tactical operations on SJPD 11 - 460.050.

Also heard BAYMACS UHF mentioned early on, but nothing heard.

I heard some of this also. This exactly the ammunition that Motorola and others use to convince agencies to switch to trunked systems. If the radio can't affiliate, it can't transmit. Heck, while you're at it, you might as well spend the money on full time encryption so those pesky citizens won't know what's happening either. Homeland Security will pay for it all so it won't really cost anything. :(

The day is coming, folks. While I was back in Ohio, the Department of Natural Resources rangers, equivalent to our Fish and Game Wardens, has thier own trunked system with full time encryption. At least that will keep Bubba from finding out where the road kill is, I suppose.

Regards, Jim

Well, fortunately it doesn't happen too often. Jim, I am sure you were probably disgusted by the language and racist comments made by the disgusting person transmitting. I did notice dispatch put out info on the MDTs to switch to channel 9 . Now the idiot couldn't know that, I simply started hearing Mary and William units on 9 and it doesn't take a genius to figure out what they did. Hope they somehow catch the jerk

I agree Motorola will probably use scare tactics, etc., to sell new equipment but its quite expensive for a dept. the size of San Joses to switch, hopefully they won't do that for sometime.

Why switch to trunking when you can steal the frequencies from others
who switch to trunking. SJPD does it right in my opinion.

Regarding the jammer, maybe Ron Coursey is back in town.

You missed my point. I can use a $150 radio to try up any conventional system in the US. It's just a matter of figuring out the PL codes and repeater offsets, as this jerk was obviously able to do. Adding more channels doesn't solve this problem but going to a trunked system will since only a radio that's recognized as affiliated can transmit on a trunk system. You can also turn off a lost or stolen radio in seconds using software, something that's not possible with a conventional radio. I'm sure that motorola salesmen have a whole slew of recordings of these types of pirates to help sell their trunked systems.

Why not? The XTS 3000 was the top of the line replacement for the Saber
III at the time, and covers into T-band.

I got your point the first time. The deal is I can count the number of police jammers in the last decade on one hand. I don't think it is that big of a problem. What is a big problem is complicated trunk systems that really don't work as well as conventional radios. Less is more. Worse yet, having to be relegated to 800Mhz signals that go nowhere.

Coursey was none too happy being busted in the early AM. Then again, when you play rap music over the SJPD repeater, it is best not to play that music so loud that it can be heard outside your house.

Peter Schleminger doesn't jam the SFPD any more since he OD. Well, he did jam from the grave for a while, but only on ham repeaters.

The guy jamming San Mateo was a bit harder to find since he did his jamming mobile. The FCC eventually caught the guy. An extra class ham too. I forget his callsign.

Three notorious jammers 10 years. I'd take my chances with conventional radios.

I have to agree with Gary. I didn't' mention, but I did ask about San Jose going trunked at least twice in the last 8-9 years and was told NO by two different very reliable sources, one being the SJPD Dispatcher, the 2nd a Firefighter for SJFD. Remember SJPD picked up Santa Clara Police channels when they went trunked and are now SJPD 1 and 2. SJFD as also added new frequencies in the last few years. Doubt you'll see any trunking there for some time to come.

I'll toss my two shillings in on this discussion. I would be absolutely floored if San Jose migrated to a trunked system within the next decade. The publicity has been bad enough with the new CAD system having difficulties. But moreover, the bad press that other jurisdictions have had with their efforts to move to trunked systems has done the manufacturers no favors. I think San Jose's attitude, at least from folks on the front lines, is one in which they say if it ain't broke, don't fix it!

Cheers all!

Actually you can shut off radios on a conventional system. Our new
radios have a feature that if stolen we can shut them off over the
radio. The radio has to be on to do it, but it can be done. Each radio
has it's on ID code on the system. All of this on analog conventional.

The only time I have had a chance to listen out of county was during the testing I went to Pismo Beach on Hwy 166 thru Cuyama Valley. I was able to hear the VHF Fire channels into Cuyama with no problem. I lost the UHF channels about 15-20 miles into Santa Barbara County. I will have to do some checking once the new system goes on line this week.

Cutover to the new system starts Tuesday morning and we are counting the hours :-)

I googled around a little bit, but I haven't been able to find any information about the way analog radios identify themselves. Is this something you can decode with a tap, or does it fall under the same kind of thing as decoding an MDT: you're not meant to hear it, so it's uncool to try.

Anyone done this?

This is probably one of those systems that has that funny data burst at
the start of each transmission. If so, what kind of radio has that feature?

I recall hearing traffic over the SJPD repeater that leads me to assume
there is some sort of "panic" button on the radios too.

The radios are Motorola, but I don't recall the model number right off hand. There is a burst of data (about 1/2 second worth) when it is first keyed up. I shows a radio ID on our radio consoles and we have the capability to "test" each radio individually and disable the transmit. There is a 3rd option we can do, but I don't remember what it is. The only thing, we can only turn off the radio if the radio itself is turned on so it can receive the disable code, unlike a trunked system that you can lock out altogether.

Hi Paul,
State Park Rangers use DPR Brown 856.9375 / DPL115. Busy channel
with lots of traffic stops and rescues on the lake when it gets
windy there. Also check www.radioreference.com web site for Merced
County TRS. It's an old Motorola Type I system that's on Mt. Bullion
in Mariposa Co. Hope that helps.

I found out (accidentally) it's incredibly easy to transmit on a trunked system. I won't divulge how, but simply with a trunked two-way radio programmed to receive the trunked system.

Mike,
We have a similar system in Sonoma County. We had to get all our
older HT1000's modified to be compatible with the system. Our
dispatchers can set the system so only a radio with the correct ID
will key the repeater. That feature is disabled because we have too
many weak signal areas where the correct ID isn't always received or

is garbled. I don't know if San Jose has a similar system but they may also have the universal lockout turned off since this knothead's transmissions went on for quite a while.

In our system, the radio test feature only works with radios that are already checked out to the system. If I'm using a non-S.O. radio, the dispatcher's only option to kill the radio is to turn on the ID-Only feature so the pirate radio can't key the repeater. Even with the ID-Only feature turned on, the radio would still work on simplex as long as it had the right PL. We found this out several years ago when someone with a darn good radio and antenna would key up on simplex every time there was a transmission and cover the radio traffic for about a 10 mile radius in the south county. This went on for several days and then stopped. We never did catch the guy.

Regards, Jim

Just from listening to SJPD traffic, it's clear that some radios have a key-up or key-down data burst and some don't. I *think* it's the difference between the car radios and the handpacks, but I really don't know.

In any case, it's not clear whether this particular jammer was using a police radio or a modified ham radio. Some observations:

There was no key-up or key-down data burst.

From my location in south San Jose, the signal strength on the input was similar to what I get from units in the affected districts. The signal strength was nearly constant, consistent with a fixed location, and not a handpack.

Attempts by the jammer to speak "over" patrol units was not usually successful--indicating the received signal strength at the repeater input was weaker than most car radios.

The audio quality was different from the usual--the level was lower and it didn't sound like there was any mic gain applied. I did not have my equipment set up to check the deviation to compare.

It sounded at one point like there was two different speakers, and there were voices in the background.

It didn't take him very long to react to the switch to SJPD 9, though that was announced by MDT only.

My DF gear is 140-170 MHz only, so I wasn't able to jump on this--but I'm certain there were others who did.

you say it didn't take him long to " react " to the switch to channel 9 ?
Did you hear traffic from him on 9 ? To be honest I didn't monitor long
enough to see if he made the switch or not. I was pretty disgusted listening to
the jerk. I agree ,did sound like more than one person and I did hear
background noise as well.

Thanks for the info.

I know this has nothing to do about radio's but,

FYI There is a flashing light at the guard shack.It can bee seen from HWY 152 which is about 2-3 miles from the shack. It rotates and has 2 colors. Yellow and Red. Yellow means winds 15-30 mph (which was yesterday) and RED meaning 30-50 mph (Lake Closed-Get Off the Lake). Interesting...Never seen anything like that before.

Yes, he did follow to SJPD 9, but didn't transmit for very long afterwards.

He could have found out about the switch over any number of ways; the simplest that he had a scanner and heard it just like I did.

I forgot to mention--part of his transmissions consisted of audio feedback squeal. This would indicate he had a separate receiver tuned the channel and not just a single transceiver.

Yeah, his commentary was pretty juvenile, though I estimate him to be in his late-20s, early-30s.

Unfortunately, I don't think this was a stolen police radio (one would hope so, then one could wait for the battery to run out.) I'd hate to think he was a ham, but it does take some (minimal) amount of knowledge to free-band a radio and figure out how to key up SJPD repeaters.

38904. FS: Cushcraft 800 MHz Yagis

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-18 17:45:35 UTC
From: bc250
Topic: 38904 Message: 38904

I've been reading Bayscan for quite a while, and the thread about yagis reminded me about a batch of antennas that I've been meaning to offer here. I bought them several years ago for a project that never got off the ground. They are Cushcraft PC-8210N 824-896 MHz welded aluminum yagis, with 10 elements and 11 dBd gain. They are about 4 ft long by 8" tall at the widest element, and they weigh about 4 lbs.

http://www.cushcraft.com/details.asp?style_id=6&catid=123&group_id=14

They're unused in the original boxes, and I would like to get $45 for each. I live in SJ, so I can meet anyone who lives in the south bay who wants one, or I can ship them easily. Please contact me off-list if you're interested.

Thanks,

Will

Took my BC-246T to Fry's Saturday and picked up 467.85. It sounded like loss prevention, or employee monitoring. I never managed to pick up the CTCSS, but I think it was 79.7 or 67.0.

If someone could confirm, that would be great...

38925. CHP Unit IDs

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-20 02:31:42 UTC
From: inigo4688
Topic: 38925 Message: 38925

Hey guys,

I don't know if I've raised this question before or not, but I'm wondering what some of the letters stand for in the prefix unit IDs for CHP officers. I already know a standard patrol officer looks like:

[Office #][Beat #] -- Ex: "34-20" is a Marin County CHP officer (34) patrolling from Seminary Dr. to around Freitas Pky. on Hwy-101 (beat 20 & 120), and "34-115" is a normal patrol officer covering from Hwy 101 along Hwy 580 to the Richmond San Rafael Bridge (beat 15 & 115). (Just in case you guys like speeding in Marin, now you know who'll be chasing you :P)

I'm curious about what the letter prefixes mean in the ID for the more specialized units. I was wondering what COZEEP means again, I remember it has something to do with highway construction/maintenance crews. (Is it an officer that hangs out with them and does speed enforcement to get people to slow down?) On the radio, they sound like "34 COZEEP 1" or "34 COZEEP 2", and sometimes dispatch pronounces it so it sounds like 'code z,' which I remember caused some confusion a while back.

I was also wondering if someone knew what "Edward" units were for. I hear "34 Edward 2" (34e2?) a lot checking registration on 'cal commercial' plates and hanging out by the Richmond San Rafael Bridge toll plaza. Do they do commercial enforcement on big rigs? I also remember reading something that said they were like "highway violence prevention" units somewhere, but I have no idea what that means pertaining to a law enforcement officer or where I heard it so I doubt that's accurate. This one's got me really curious.

The rest of them are easy:

D - David -- Detective.
M - Mary -- Motorcycle unit. "34-20 Mary"
S - Sam -- Sergeant. "34s1"
V - Victor -- Roving? There's a roving patrol unit in West Marin County that supplements the two local Sheriff's deputies there called "34-46 Victor."

That's all I've heard. Could someone remind me what COZEEP units are, and does anyone have any idea (or I'm even for educated guesses since it's got me really curious) what the Edward units are for?

Thank you very much for lookin that over, and if you don't pay attention to callsigns maybe you know something new about the CHP guys you listen to in your county. :)

Yes, it is COZEEP (co-zEp), an acronym of Construction Zone Enhancement Enforcement Program. Basically, it's a contract between Caltrans and the CHP for the CHP to provide special enforcement. In this case, it is specifically within construction zones--with commercial contractors. Maintenance Zone Enhancement Enforcement Program (MAZEEP) also exists, which is enforcement specifically with Caltrans maintenance crews. (Speaking from first-hand knowledge, they are quite handy to have present with you.)

These special units are easily identifiable as they sit stationary with their rear-facing lights on. And, yes, they are on overtime--this is voluntary duty in addition to their regular work schedule.

Here's chapter 2 of the Caltrans Construction Manual, part of which talks about COZEEP. It is in PDF format.
http://www.dot.ca.gov/hq/construc/manual2001/chapter2/chp2_2.pdf

Where are these funny photographs? All I see is usual collection of vehicles I see at the Livermore swap meet. ;-)

Now some guy walking around with a QRP rig and a huge antenna strapped to him doing CW would be funny, er not that anyone on this list does that. [double ;-)]

If you want to do a ham web site that is even funnier, I know someone who brought a non-techie to the old Foothill flea market. Bored with the ham and computer stuff, she decided to take photos of well er um eh does anyone remember the old John Belushi plumber routine on Saturday Night Live.....The photographs, shall we say, cracked me up.

a clear unit is a special unit usually a motorcycle that is funded by a special grant, I think federal, to keep the highways clear. Same program as the FSP. They figure it's cheaper to get more cops out there and a few tow truck drivers at the ready than to build wider freeways.

A "Tom" unit is a training car. 1 officer doing in-field training and 1 training officer. Always a 2 man unit, but the trainee does all the work (driving, talking on the radio, and report writing)

A "David" unit indeed is a detective, but is also any unit that primarily works in the office. The PAO (public affairs officer) is also a "David" unit.

I have also heard "Movie" units, as in Movie1, Movie2 ... they were over time units working a movie filming.

There are also "Robert" units, as in Robert1, Robert2 ... primarily overtime units working special projects.

Both of the above are always prefaced with the office id .. as in 69Movie1 .. Bakersfield office, movie unit 1

Richmond was just dispatched to a commercial fire on Cutting Blvd.
First unit on scene states one story commercial building iwth heavy
smoke showing.

Traffic is on Richmond TRS with fireground on Tac 10. Didn't catch the
address on Cutting and I'll leave it to Ed to do a rundown on the units
on scene since all fire trucks look alike to me. :)

Sorry, never did get the address but it sounds like they knocked it down in about 10 minutes. Ed, I'm suprised you can't get Richmond - it comes in really well up here in Petaluma.

Little ones and big ones are about as much as I know about fire engines, that's for sure. Oh, yeah, some are red and some are yellow. :)

YELLOW ugh !!! hate anything other than red or
red/white.....although white with red stripe is ok LOL

I will try again with Richmond. you know freqs can be so funny. SFs'
system is so tempermental it seems..... I can get Sonoma from here but NOT
SF , probably with the damn TRS ,,,,,,,prior to that I could get SF with no
problem.

I will be in Napa area within the next week ,can get Richmond from there
anyway. they had a pretty darn spectatular fire early this morning with the
pallets etc , pretty good video on both 2 and 5 this morning. Pretty much run my
CoCo BC7 and CoCo units (7 Engines 1 Truck)

38949. New Kern County Radio System

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-21 06:42:33 UTC
From: Mike Derryberry
Topic: 38949 Message: 38949

Well we finished 90% of the radio cut-over today. Fire moved to their new VHF channels yesterday and it went pretty well. There were a few small problems found that were remedied fairly quickly. All in all the fire move went smoothly.

We started at 0900 this morning moving people around. We had to vacate some of the old channels to move units to the new system. That made for an interesting day. We normally have 3 dispatch channels and a countywide administrative channel. We started out by eliminating 1 of the dispatch channels and moving those units to the administrative channel. It made for extra traffic on the remaining dispatch channels for a while, but went very smoothly. We had moved everyone around to their new channels almost 2 hours ahead of schedule, and everything worked.

We got calls from units testing the new radios in known "bad" areas and everywhere they tried was vastly improved. I spent most of the day on the phone explaining to people how to switch their radios to the new system. They went to the radio orientation class and I didn't ... go figure ..... I just sat there and played with the radios for about 20 minutes and learned how to do pretty much everything.

One nice thing about the new system is that we don't hear the data burst at the start of each transmission anymore. It is still heard on my scanners, but now in my ear at work.

One thing to note ... for those who listen to our system, The channels are labeled East Disp, West Disp, Metro Disp, East Tac, West Tac, Metro Tac and admin. One would think that to hear all the dispatch traffic just listen to the 3 dispatch channels. Not so for now .... The West Disp channel is getting a little modification so for the next couple of months we are dispatching on the West Tac channel and they are using the West Disp channel for car to car. We have reversed them till an additional repeater is put in.

That's about it ... any questions or comments, fell free to ask .... however please do not ask for PL tones or repeater input frequencies as I have been asked by my employer (the County of Kern) not to release that info.

Happy scanning ... my feed radios listed on my sig line have been reprogrammed if you want to take a listen.

Mike

Thanks for the details, Mike. It's always interesting to hear how a big radio switch goes. As for the people who didn't know how to work the radios, how many times a day to get someone who "forgot" how to log on to their MDC? :)

I can understand the repeater inputs but why not the PL tones? Anyone with one of the newer RS or Uniden scanners will have the PL tones pegged in about 10 minutes and they will get published anyway.

Hi Jim ... regarding the PL tones, you know, I know and the radio techs all know how easy it is to get them and that they will be on the net very soon. I was asked not to I was asked not to release them, so I have to honor that request, since I like my job and have a house payment every month. :-)

My guess is that within a month the PL tones will be all over the place on the net and I can just point people to those sites and still not get into trouble at work.

Mike

Mike,

Understood - you have to what the boss tells you. I just checked
RadioReference.com and the inputs and PL tones for most of the new
fire system are already there. :)

Regards, Jim

Wow.. qsl.net sure is speedy.. Takes me back to the days of 1200 baud
modems. My web browser says I'm getting 350 B/s. Wouldn't be a bad speed
with a K in front of it...

I think I can type at 350 B/S.

Ditto on the slow speed at QSL.net, but of course, it's free.

So what kind of poles are you using for that loop?

I have two receive only loop antennas that I use with a Wellbrook ALA100
amp. This one is 11ft on the diagonal, made from fiberglass poles
purchased from Tap Plastics.. In the photo, it is nulling a beacon near
an undisclosed location in the Nevada desert.
http://www.lazygranch.com/images/radio/bigassant.jpg
The other loop is similar, but only 4ft on the diagonal, using
fiberglass tent poles.
http://www.lazygranch.com/images/radio/loop1.jpg
http://www.lazygranch.com/images/radio/loop2.jpg
http://www.lazygranch.com/images/radio/loop3.jpg
http://www.lazygranch.com/images/radio/loop4.jpg
http://www.lazygranch.com/images/radio/loop5.jpg
The wire is flexweave from DavisRF. The wire connectors are speaker
terminals from Parts Express.

At the moment, none of my loops are wearable. ;-)

I was not sure of the location in earlier posts.. I have heard the vehicle they are looking for was last seen in the area of Knull Valley Road. I hope im spelling that right. I'm not familiar with CoCo area. Units now advising its been 20+ min since they last saw the car.. CHP to be notified. The car was a Honda and appeared to be following a Blue BMW. Unk if the BMW was related or not.

Is there anyone familiar with Washoe County Nevada's EDACS system? I see on RadioReference.com that there are multiple sites listed. Can these sites be combined together or do they need to be in different banks. I have the BC780 so I know I can't have 2 trunking systems within the same bank but this is the same system just different sites. Thanks.....

SEATTLE (Reuters) - Seattle police launched an investigation on Friday to determine how a patient undergoing emergency heart surgery caught on fire at a local hospital in 2003.

The male patient, who was not identified, went up in flames after alcohol poured on his skin was ignited by a surgical instrument.

The patient died after the surgery but that was due to heart failure and not the fire, said Dr. Robert Caplan, medical quality director of Virginia
Mason.

Caplan said fires are known to occur in operating rooms although they wereextremely rare.

The two-year-old incident became publicly known after an anonymous letter sent to the media mentioned it as a sign of unsafe health care at the hospital, and said the patient burned to death.

Caplan strongly disputed its contents. "That letter is factually incorrect," he said.

I personally like the SWAT monkey. Better be careful, he may put some of our SWAT members here out of business.. ;)

PHOENIX (Reuters) - Send in the SWAT monkey.

It's not an order police commanders are accustomed to giving, but that could change if an Arizona police department follows through on a proposal to train a capuchin monkey for high-risk police operations.

A Special Weapons and Tactics veteran from Mesa, Arizona, a suburb of Phoenix, has researched the possibility of landing a $100,000 federal grant to fund a pilot program to train one monkey.

"Everybody laughs about it until they really start thinking about it," Sean Truelove told the East Valley Tribune, a local newspaper. "It could change the way we do business."

Major city police departments in the United States use paramilitary SWAT teams for hostage situations and in situations involving heavily armed criminals.

Truelove, who declined an interview request from Reuters, told the newspaper that the idea came to him in a dream about 18 months ago.

The test monkey could be trained to unlock doors and search buildings for police on command, Truelove was quoted as saying by the newspaper.

The capuchin monkey is considered one of the smartest primates, known by many for its decades-long association with organ grinders. The monkeys weigh three to eight pounds (1.3 kg to 3.5 kg) and live for 15 to 20 years.

Capuchin monkeys, native to southern central America, have been used to help disabled people, and are able to perform such tasks as retrieving items, serving food and opening and closing doors.

The Mesa, Arizona police department issued a statement saying: "We have always encouraged our department members to seek creative and innovative ways to improve public safety in our community."

But the department also said the idea of training a capuchin SWAT monkey had not been cleared by the department's executive ranks.

A representative from the nation's largest association of SWAT officers also could not resist poking a little fun at the proposal.

"I've always heard you can train a monkey to do anything," said Steve Smith, a board member of the National Tactical Officers Association when reached at a convention in Nashville. "Does this mean he's going to have on little black fatigues?"

Each EDACS site is a different system for scanner trunking.
One per bank due to the Logical channel asignments.

38977. RAT/ETS Packs

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-22 07:59:35 UTC
From: Tim
Topic: 38977 Message: 38977

http://www.trac-asia.com/cashtrac.htm

Be sure to watch the video.

San Francisco is listed, and since there aren't too
many companies making such things, plus out of
compatibility/mutual aid concerns, it's likely that
this is the same specific system in use in other
counties around here, and probably most of the USA.

We've had a little discussion over the exact freq
before. Kelty claims something around 216 or 219MHz.
That'd be a good choice in terms of having the
low-power signal transmitting on a freq in a
relatively low noise-floor spectrum area. Yet I
sat right outside of a San Mateo bank that had an "ETS
activation," and didn't hear anything on Kelty's
claimed freq, while San Mateo PD was inside the bank,
trying to figure out which pack it was (i.e. it was
still on the air while I was outside the bank).

Studying the length of the 3-antenna array on
police cars, especially in comparison to the
173.075MHz 4-antenna Lo/Jack array on other police
cars, based on antenna length, my guestimate would be
that the RAT/ETS
beacon operates somewhere within a 10 or 15MHz window
centered on 190MHz, even though I know that's in the
VHF television & wireless mics band.

38978. using BC245xlt for SF trunking

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-22 10:54:29 UTC
From: Ross Mutzelburg
Topic: 38978 Message: 38978

I will be visiting the US on vacation during May and would like to use my BC245xlt to listen to SFFD. I'm fairly new to trunking as there are not many systems here in Brisbane (Australia).

Could someone tell me the base and offset frequencies for this system for the 245xlt, or point me in the right direction of where to find out.

Thanks in advance.

Ross

Did you search one frequency or band scan the around 266 to 219Mhz? I'd
also suggest doing this in AM mode or CW if you have it rather than NFM.

The trouble with eyeballing antennas is you don't know if they are a
half wave or a 5/8th.

>At the moment, none of my loops are wearable. ;-)
>

"Wearable" is a relative term. I had two 3 inch PVC tuning 90 degree curved bends in a backpack with 20 ft fiberglass (not carbon fiber) collpasible fishing poles, minus tip sections, pushed into them. Holding this up was one thing; putting it *on* was another; lots of mechanical moment, not to mention wind load. An LDG tuner with battery was in the back-pack and some number 20 stranded wire ran along the poles and acress the gap. The loop was less than 50 feet in circumference, and would have done better on 15 meters than the 20m frequency that Shootout used. I tried it ONCE for an individual Field Day "mobile" operation -- and gave that up as too much work (grin).

FWIW, a 20 meter *dipole* a V of two non-carbon poles, fed at the center with teflon twisted pair and ends taped down along the poles, did very well compared to the the other antennas, but since the owner was on the event staff (I simply got drafted) her results are not posted.

For NDB's etc. I've been using an EMCO 6511 20Hz-5MHz loop with an HP 8447A preamp but that is too close to my computer and other powerline noise sources in the cabin.

38983. Humor On CHP Radio

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-22 20:26:43 UTC
From: Brian
Topic: 38983 Message: 38983

A Redwood City unit was recently dispatched to check on ducks wandering the onramp to SB 101 from Hillsdale.

When an officer reported that they were "10-98, UTL", you could clearly hear his partner giving a "quack" in the backgroud. Dispatch repeated the words in acknowledgment, as usual, and you could hear people quacking in the background again. The dispatcher starting laughing over the air.

Pretty funny.

That could be it. I just heard Medic 420 (the rig dispatched to the same location) say that they were heading to El Camino's ICU with Lifelight's crew. Strange that they chose El Camino.

Brian,
It depends on where the tear in the aorta is located. If it's in the aortic arch, you can usually hear it with a stethoscope if you've been trained what to listen for. The patient usually has an awful look that's different from a normal MI, with severe, excruciating pain, low blood pressure, low pulse but none of the grey pallor and profuse diaphoresis you see with a normal MI. All I can say is that once you've seen one of these unfortunate people, it usually jumps out at you the next time you see one. I hope things turned out OK for the patient.

Regards, Jim

Topic: 39010 Message: 39013

I was on my way back to Antioch when this went down, was out of range at time of 11-99. What I have gathered so far is a Pittsburg Officer was shot in Antioch, condition unknown but he was talking. I beleive, and again this is not fact, only what I beleive what happened. The Pittsburg Officer was chasing or at least looking for robbery suspect(s) in an area that borders with Antioch.
I was able to pick up area law enforcement just after the shooting and you could probably understand the traffic on the Pitt. Antioch, CCSO, CHP and every other agency in Contra Costa. I even heard Rio Vista PD in Antioch setting up a perimiter.
Antioch PD has taken two suspects into custody and Pitt. sounds like the are sure its them. FBI just went on scene.

More later, going to dinner.

Dennis

Nothing more I can find in the nedia except the officer was wounded and airlifted to John Muir. No word on his condition at the hospital but hoping for the best. At least the two scumbags are in custody. There were apparently about 15 shots exchanged in the incident.

Regards, Jim

We did have a non-injury plane crash up here in Petaluma at the same time. The only thing I heard in Marin was Marin's air unit assisting the Coast Guard in finding an EPIRB that was set off in the San Rafael area. Turned out to be an accidental activation on a yacht in the the San Rafael Yacht Harbor.

39026. Pittsburg Police Officer Wounded In Shootout

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-24 17:57:06 UTC
From: Nick in Fresno
Topic: 39026 Message: 39026

POSTED: 8:32 am PDT April 24, 2005

PITTSBURG -- A Pittsburg police officer was critically wounded Saturday evening trying to arrest two suspected armed robbers, authorities said.

Police received a report of a robbery at the Raleys Market at 1375 Buchanan Road around 5:50 p.m., Capt. William Zbacnik said. The suspects were reported to have fled in a white compact car after allegedly robbing the market and a Wells Fargo bank counter in the store.

Minutes after receiving the initial call, according to Zbacnik, a second call reported that a white compact car had crashed into a parked car at Woodland and Norine drives. Witnesses reported to police that two suspects exited the vehicle, one of them allegedly dropping a gun momentarily before picking it up.

A pair of Pittsburg police officers searched for the suspects on the Delta De Anza trail near the Antioch border when one of the officers heard a noise in the brush and spotted the suspects, according to Zbacknik.

The officer, who had his gun drawn, ordered the suspects to surrender. As he yelled the command, several shots rang out, and the officer was hit twice.

Zbacnik reported that both officers exchanged fire but the suspects were not wounded. The injured officer was taken to John Muir Medical Center where he is in critical condition.

The suspects were arrested for attempted homicide and robbery, according to Zbacnik. They are being held at the Antioch Jail.

From: caladded@aol.com
Topic: 39027 Message: 39027

the story about the female bank robber is she has hit 2 banks within grocery stores , the last 2 in Felton and Scotts Valley in Santa Cruz County. white female in her 30s or 40s .....bit unusual , don't hear that description for many crimes. Most recent , in Scotts Valley , was a Wells Fargo within a Safeway Store.

No, F&^king comcast was having problems with the speed and I was only getting dail-up speeds for three days which kicked FF off line, now the YAHOO'S (Firefeeds)can't seem to find my login info and my Password is not working (again)....
I sent three e-mails asking for help and when someone did reply it was to tell me I was off line (Duaaaaaaa) so now I'm on thier S*&t list. "what else is new"

I like getting paid for my feed but now I'm fed up with the B.S. and would be willing to move it to someones server, and let someone else host the feed, but I'm not going through all the B.S. of setup a web site and paying for it and domian name (thats cost a little bit of money that I don't have)
That's my story and I'm sticking to it.....

Sorry for the delay in responding, was away at a wedding & am just getting
to reading my email.

RadioReference has the Washoe freqs, though some of the TG's are off or not
correct, but nothing serious.

Try this site, http://www.mjw.com/scanner/index.htm & click on the
Washoe link. The owner of the site was the manager at the Radio Shack
listed at the bottom of his home page (he has since left & gone into
business for himself) & helped me when I bought my 96 last year. Apparently
has not dropped the RS ads from his site yet.
The best site for the Washoe EDACS would be the Reno Metro site.
I have a few lists if you are interested but most of it is P96 files for
the Pro96. Contact me off list if you are interested.
Brian

Here in Marin over this past weekend Comcast was having SERIOUS isses not
just with speed but the f*&king connection :)

I was on and off-line on Friday night quite a bit but its working now and
the speeds are better then ever.

39048. The Shooting of the Pittsburg police officer

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-25 06:10:45 UTC
From: kdawg122786
Topic: 39048 Message: 39048

hello all

I just have a quick question regarding police procedure. I was watching the 10 o'clock news on Sunday night. They reported that the officer that was involved in the Pittsburgh shooting was alone when he was shot. However they went on to say that there officers had a visual on the cop when he was shot. Is this normal police procedure to have one cop searching for an armed gunman? Shouldn't they search for a ARMED suspect in at least teams of two!!

Just a thought

God bless the officer and his family

Regards, Kyle

"can reduce with LOL" was transmitted. how i interpret that is that
the erratic driving, FTY, and subsequent code 33 was due to the driver
being a LOL ("little old lady") ...

This is always tricky because you get into an automatic crossfire situation if you're literally shoulder to shoulder. The officers that were doing the searching probably had a field of fire worked out between them if they came upon the suspects. It appears that this officer was unlucky enough to both come up on two suspects who opened fire without warning and at least some of the shots hit him in an area not coverted by his body armor. Having more officers more closely spaced probably wouldn't have changed the outcome and you could have easily gotten into a crossfire situation with all the adrenaline pumping.

The latest news is that the officer, Larry Lasater, is in critical condition and on life support. His wife is expecting thier first baby in a month. A very sad situation that doesn't sound like it's going to get better. :(

Regards, Jim

39054. Hayward PD Activity last night (Sunday) - ? 6-8 units

Yahoo group: bayscan (2005-01 — 2005-05)

Sorry for the delay in responding, was away at a wedding & am just getting
to reading my email.

RadioReference has the Washoe freqs, though some of the TG's are off or not
correct, but nothing serious.

Try this site, http://www.mjw.com/scanner/index.htm & click on the
Washoe link. The owner of the site was the manager at the Radio Shack
listed at the bottom of his home page (he has since left & gone into
business for himself) & helped me when I bought my 96 last year. Apparently
has not dropped the RS ads from his site yet.
The best site for the Washoe EDACS would be the Reno Metro site.
I have a few lists if you are interested but most of it is P96 files for
the Pro96. Contact me off list if you are interested.
Brian

39056. Wish I hadn't...

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-25 20:24:56 UTC
From: Chuck Hoffman
Topic: 39056 Message: 39056

A couple years ago, I bought an RS PRO-2052 scanner, exclusively for listening to Alameda County trunking systems. I wish now I'd gotten the Uniden instead.

The PRO-2052 just is not very sensitive. And the front end and IFs are as broad as a barn. It seems like virtually any RF signal will cause the audio to be clipped. It is annoying as hell when I only hear half the dispatch and miss the address, type of incident, etc.

Does anyone know of a narrow pass filter for the 860 band that will eliminate the problem I'm having?

sounds like the bank robbers tossed the tracking device near the bank.
a citizen pickied it up, took it into apet store with her, and
realized what it was when she saw all the police officers in the area.
there may have been a female accomplice to the robbery. police have
detained a BM, w/missing teeth, beanie, matching the description of
the suspect. the suspect used a note saying he had a gun, but didn't
show a gun.

Topic: 38744 Message: 39060

I picked up one of those Pro-2051's today since they are so cheap ($150) right now. Anyway I was wondering if anyone can recommend the best software for programming it?
I also have a BC250 so if I could use the same software that would be awesome.

So far Im impressed with how its receiving the SF system here in Marin with just an 800 MHz rubber duck on it.

I think the 2052 is a Uniden OEM for RS.

Broad filters don't cause the RF to be clipped, rather the opposite is
true. If you can find a schematic and get specs on your IF, it is
possible to swap it. That is, if you can find someone who will sell
you one IF. When I changed the IF on my AR8000, I got it sampled by
Murata. The smallest minimum order I could find was 100 units.

39064. Protests Wednesday 5PM

http://moveonpac.org/event/events/index.html?action_id=4
I hope this doesn't get misconstrued as a plug for the protest. If you enter your zipcode, you can find where the action will be locally.

Just looking at the list, I expect the San Rafael protest to cause some police action since it will mess up traffic. The San Jose and San Francisco protests have a reasonable number of registrants, so I expect there will be some action there as well.

Does the FPS protect the 9th District courthouse? I have 417.2 417.25 417.425 412.4 418.075

Perhaps the FBI?

Are you sure there wasn't another officer with the one that was shot? I was listening on Co Co SO east and it sure sounded like a guy was there unless it was the victim officer who was yelling shots fired! Does anyone know the condition of the officer? I haven't heard a thing since Sunday morning when he was reported to be in critical condition.

None that I know of yet. Since it's made by Uniden and is basically a BCT8 with 1000 channels, maybe Butel would be the company that would come up with something for it.

The officer is brain dead and will be taken off life-support once they have have prepared to remove tissue and organs for transplants. He and his wife made a decision awhile back to become organ donors. Like his mother said , he continues to be a HERO !!! God Bless Officer Lasater , he is saving lives as he passes away.

Another good person gone because of the human trash in our society. It would be nice if his killers actually got justice but that's just a faint hope in California.

I'm glad they made the decision to donate his organs. When my son Patrick was injured in a traffic accident at 19, he was in the same position as Officer Laseter, brain dead and being maintained on a respirator. He was a big, strong kid and the only injury was to his brain stem but it was enough to kill him. We donated his organs and there are eleven people who are either alive or living better lives today because of Patrick's death. It doesn't make the death any easier to take but at least it makes it less futile. My deepest sympathies to the family, friends, and fellow offficers.

Regards, Jim

Wow, to be able to help 11 people thru the tragedy of your sons' death Jim is really something. It shows just how GOOD people can be even in their time of sorrow.

I also wanted to mention that this past Saturday, the Aquatic center in American Canyon was dedicated and renamed for Lance Corporal Phillip West, USMC, who gave his life fighting for all of us.L/Cpl West had just helped save some of his fellow Marines in an attack while his unit was serving in Iraq this past December. My nephew Matt just graduated from basic training in San Diego and is now a private in the USMC Reserve. He is on break and was able to attend as was the Brig. General from USMC Camp Pendleton. My Nephew Matt will be returning to San Diego and going to Camp Pendleton for Weapons training in early May. Having known Matt from the time he was Just ONE HOUR old, I can't tell you how proud I am that he and I have the same last name (I have no kids) To be fair I am also very proud of his sister who is one year younger than Matt.

Philip and Matt were schoolmates in the Napa County area and both graduated from Vintage High School in 2003. EIGHT brave young men from the 2003 and 2004 classes signed up with the Marine Corps. Matt signed up for 6 years.......2 years Reserve then 4 active.

Rest in peace L/Cpt Phillip West and Officer Larry Lasater.

if anyone is up .....Palo Alto PD running a SWAT incident on
the 900 block of North California.....near Embarcadeo /101.

subject fired 4/5 rounds and maybe suicidal and now sitting on backporch.
wife is outside but 2 very (90s) elderly couple including the invalid wife
still inside.

PAPD presently has evacuated several adjoining houses and is being
assisted by.....

Menlo Park (3 units)
Stanford (2 units)
Mountain View (3-4 units)
CHP (Helo , probably H32) I can hear the helo from my house

on PAPD Primary 482.6125

I was in San Mateo the other day. I saw a Red Hummer H2 going down El Camino. on the side it said "Marina Fire Rescue". It didn't have a lightbar or anything but roof racks on it. No lights that I could see. There isn't any town called "Marina" around and it did have a fire type logo with a star of life in it. Underneath it said "So.San Francisco Bay". I caught up to it in traffic to see all that.

Anyone know where this is from???

39086. Perp Search in Oakland Tuesday morning

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-26 15:55:20 UTC
From: Steve Collier
Topic: 39079 Message: 39086

Did anyone catch the perp search in Oakland early this morning (1:45 AM) around 36th and Market?

I caught it in progress but don't know for what the perp was wanted. Oakland and Emeryville had canines and CHP was bringing in a helicopter. Pretty resource intensive but again I didn't catch the reason.

Steve

Nina,
Yes, the did. There was one supervisor on scene and another responding code 3 from South County when the lion was "taken out".

bcn advises that an 80-pound mountain lion was shot this morning in west san jose
after a homeowner called police to report that the large cat was in a tree in
her backyard. according to police, the homeowner, living in the 1700 block of Los Gatos Almaden Road,
called police at 6:30 a.m. to report that her two dogs had a mountain lion
cornered in a tree in her backyard. the big cat had been in the tree since about 5 a.m., police said.

police officers and the california department of fish and game arrived at the residence. after assessing the size of mountain lion, a lieutenant with the department of fish and game decided that the cat needed
to be killed because tranquilizers from a tranquilizer gun would not take
immediate affect.

san jose police sgt. nick muyo said the lieutenant was concerned that if the animal was shot with the tranquilizer gun, an agitated 80-pound
mountain lion could start roaming the residential neighborhood during busy
morning hours.

officers shot the cat around 8 a.m., according to police.

Nina,

Unfortunately, this makes sense. The tranquilizer dart dosage is kept deliberately low so the animal won't go into respiratory arrest. This also means it takes a while for the tranquilizer to take effect and the cat would have been a little cranked off getting shot. According to the news, this was all happening while children were walking to

school on the street a few hundred yards from where the cat was. Once the cat started to run, there's no telling where he'd stop when he finally drops, assuming the dart hit him correctly to begin with.

We had one of these up in Cloverdale a few years ago and it was sad to have to shoot the cat because she was a beautiful, healthy animal. F&G was on scene there also and couldn't tell us for certain how long it would be before the tranquilizer took effect and there were just too many people around to take the risk of a human injury. :(

Regards, Jim

Thank you, Ed. It was at least something we could do to make the situation a little more bearable. I heard on the news that Officer Lasater was pronounced this morning and his organs harvested. Hopefully others will get a chance at life because of this tragic event.

Good luck to Matt and my sympathy for Lance Corporal West and his family. So many of our brave men and women have already been killed defending that shithole of a country. I hope we get out of there before Matt is stuck going over and putting his life on the line for people who obviously don't want us there. :(

Interesting, they have BAYMACS repeated on to SJPD 07 (460.475 MHz) in both directions, with non-involved San Jose District A and T units moved to SJPD 08. As far as I knew, all the SJPD units have BAYMACS as channel 10, so why take up an extra channel?

I know this won't help much, but last year I saw that same vehicle driving
around the San Mateo area, so your sighting isn't an isolated incident. I forget
exactly where I saw it but I did think that it was odd and I wasn't able to
find any Marina fire department around either.

Posted 13:12 PDT

In FM modes, clipped audio is a sign of either being off frequency or receiver deviation being narrower than the signal being heard. Being off frequency may also show up as reduced sensitivity.

As for 860 MHz filters, filters, you can get cellular duplexers for very little at the Livermore, "Foothills" and other Amateur Radio swap meets. The high-frequency side works well as a filter if overload from nearby out-of-band transmitters is a problem..

I phrased my query badly. When I said ☐audio clipping☐ I really meant desense. What I☐m looking for is something to place in the feedline that will work like a tuned cavity bandpass to prevent out-of-band signals from getting into the front end and desensing the receiver.

Ditto on the IF being too narrow. Some scanners have trouble on analog cellular which has more deviation than standard NFM. Er, not that I ever scanned analog cellular.

I think these cell phone duplexers are called circulators. Are they just high pass & low pass filters? And what is the corner frequency?

SJPD 17 is routinely used by the MERGE and Metro units to coordinate surveillance, drug busts, and vice details. It's not usually encrypted, although frequently you'll hear one person encrypted and the rest of a team in the clear. Often times these same activities are coordinated on SJPD 11, an regular analog frequency.

While these provide some of the most fascinating and informative listening from SJPD, I normally refrain from commenting on activities in progress due to the potential (however slight) for officer safety issues.

You're right, though--this one has been a long-running, all-encrypted event, whatever it is. Not very common.

I tuned in just a bit too late myself, but I gather from comments that
there was a gun fight on San Carlos Ave. between two suspects, who ran
on foot. They eventually got one 10-15; the other is apparently holed up
in building on Buena Vista. They've evacuated nearby residences and are
preparing to enter the structure. Lot's of F, N, and VCET units on
scene with an inner and outer perimeter.

The corner frequency is a filter parameter. If the filter passes frequencies from say A to B, then A and B are the corner frequencies. It is often the frequency where the power is cut in half.

yep, this is the old 'control 9' from back in the early 90's and late 80's. after converting to the conventional 800 system back in the early 90's, this frequency was dormant for a while. later on they began placing all BLS and private contractors on this freq. now it's part of a larger plan and re-channeling of the county EMS radio system in the works. no word on if and when the several new 800 channels will be added, but the link i'm giving to the plan explains the full details of what they're trying to accomplish.

Generally the corner is 3db down in power, but IFs are often specified
at 6db and 60db points.

I do audio, so dB is always a voltage ratio to me, bot RF tends to use
power most of the time as far as I can tell.

I got a Kenwood CW filter at Livermore that I put in my shortwave radio.
I measured the frequency response by sweeping the frequency and
measuring the audio output level, and got this plot:

http://www.lazygranch.com/images/radio/cwfilter.gif

This filter is specs at 250Hz bandwidth at the 6db point. Now if that is
a power spec, then that would be 3db in voltage ratio, so maybe the
filter meets spec.

Topic: 39056 Message: 39141

It is a power ratio relative to the passband, which is the 0db point (no attenuation). The graph I put in the other post should help.

What you would do in a lab to test the filter is put a RF generator on one side, and a power meter on the other side. The frequency of the RF generator is set in the middle of the passband, i.e. a point where the filter should not attenuate the signal. You read the power meter. Then adjust the frequency to a point where the power meter reads 3db lower. You really don't know the frequency, so you just watch the meter until it drops 3db, then you read the frequency off the generator.

The key here is the absolute levels don't matter, but just the ratio of the levels.

I'll take a stab and say that F & N refer to different areas of the Western Patrol Division. Have a look at the SJPD beat map in the Files section. http://groups.yahoo.com/group/bayscan/files/Maps/

I have no idea what VCET is.

Sorry. The incident took place in District F (or Frank as they say).
District N (Nora) is adjacent and they use a common channel. So Frank
and Nora units would be the beat units in those districts.

VCET is the Violent Crime Enforcement Team in San Jose.

I had to leave so I didn't get to follow this until conclusion, but it
was beginning to sound like they didn't find anyone in the structure.

SJPD 17 is modulated with P25 (except for station ID); it is sometimes
also encrypted, most of the time not. Tonight there was an extended
detail that was entirely encrypted, which doesn't happen very often.

SJPD 17 is APCO P25, WITH encryption

Although it's usually part-time encryption.

OT, I also hear that Trish retired recently and suddenly as SJ's comm manager.

Any word on a replacement ?

a very basic question:

assume you have two identical scanners A and B, (basic non trunking nondigital simple scanners).

i am trying to figure out why B isn't working:
can receive 154.310 on A but not on B.

1) channel is not locked out on B
2) neighboring freqs can be received on B

i have not yet:
3 tried to put 154.310 in another bank / channel on B
4) tried to put another receivable freq in the channel that 154.310 occupies on B...

what might be going on?

Experiments:

1)Take off the antenna on scanner B and see if there is a birdie on that frequency.

2) Put some distance between the two scanners in the event that they are interfering with each other, or perhaps A interferes with B. This has to do with the mixers in the radios leaking RF.

I misspoke (mistyped?) when I said "cellular," however, 800 MHz trunking duplexers may also be found at swap meets. You'll be looking for ones with 806?821 MHz and 851-866 MHz sections. Cellular filters are meant for 824-849 and 869 ? 890 MHz..

Just an FYI, birdies are signals present in the scanner without an antenna attached. Technically you should have a 50 ohm load on the input to make really sure the signal isn't external.

Different scanners have different birdies. The birdies generally come from the mixers, and scanners can have different mixer frequencies or number of mixers. Another kind of birdie is due to the microprocessor clock causing interference. This isn't a birdie in the "old school" sense, but the effect is the same.

Somewhat on the same topic, any time you heard something strange on a scanner, it's always good to try the same frequency on another scanner. This is because what you may be hearing is a birdie, or worse yet, a wandering birdie. The wandering birdies are caused by using cheap ceramic resonators rather than crystals to set the microprocessor clock frequency.

39165. 800Mhz Nextel/Public Safety re-banding info

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-27 21:13:51 UTC
From: KG6VXT
Topic: 39064 Message: 39165

Some good documents to review ahead of the re-structuring of 800mhz for public safety.

Master website:

http://www.800ta.org

Quick Guide
http://www.800ta.org/PDFs/guide.pdf

Master re-banding handbook
http://www.800ta.org/PDFs/handbook.pdf

Seems that some of the older trunk tracking scanners with non-flashable firmware won't be
compatible with the new band plan channel assignments, or new frequency bands.

Should be interesting to see how the scanner manufacturers deal with this and the 700mhz band.

Save your pennies for new equipment.

hi gary, thanks.

i didn't realize that the antenna had to be off! cripes. i appreciate
your patience.

when you write, << Different scanners have different birdies>> should
i assume that identical scanner models would birdie at the same
frequency if there is one there? in other words wouldn't the mixing
products be the same between virtually identical units and thereby
cause the problem on both? or is there significant variability
between components in virtually identical receivers?

so, let's say it *is* a birdie: how do i work around it, so i can pick
up this freq on that scanner? does something have to be replaced?

nina

39167. Re: [bayscan] do channels fail?

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-27 21:40:35 UTC
From: gary
Topic: 39150 Message: 39167

Identical scanners should have the same birdies.

If you have a birdie on the scanner, you can't receive any signal on
that frequency because the birdie will win.

A few scanners have selectable IFs so you can move the birdies. This
seems like a poor solutions since better construction can eliminate the
birdies.

Some scanners publish the birdies in the manual.

okay, sounds like it is not a birdie, since one scanner works and the
other doesn't.

is this what intermodulation is, i wonder?

This is only true if both radios are the same exact model. This would not be conclusive if they are different models. Are they?

800 MHz *mobile* duplexers are relatively small, and the ones are for trunked systems are necesarily broadband, so tuning isn't required. I thnk you could get one for $30 or so at Livermore. Granted, it would only pass 800 MHz.

Topic: 39186 Message: 39186

For the first time since I programmed it in a year or two ago, I'm actually hearing the FIREMARS 2 repeater (866.9125/156.7Hz) in use right now.

"TI Command" just talked REACH 3 in to their Landing Zone a couple minutes ago, and I'm hearing sporadic one-way traffic on it.

I'm assuming it's an exercise taking place on Treasure Island, and that some or all of the FIREMARS 2 traffic is patched.

I'm hearing the repeater quite well on a BC-796 tapped into the standard AM/FM antenna on my car in Sunnyvale.

Tim

39188. CB radio monitoring

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-28 20:37:03 UTC
From: Mike Wright
Topic: 38977 Message: 39188

Now before everyone starts on a rampage of jokes/cynical comments, this is a real question I have.

I have a Cobra 19 which I've rarely hear any transmissions. I have it as a base unit at home (in west san jose) with a mobile magmount on a 20 inch piece of metal by the window (I'm in a condo). I tune it to Ch 17, 18, or 19 but the whole evening will go by and I think over past few weeks, I only heard one conversation. I don't monitor every day but I'm certain the radio works OK as I can hear background interference.

Although CB is not as congested as in the 1970s, I expect to hear something. Bill at www.bills2way.com said CB is very popular in the bay area of people passing traffic information but I have yet to hear any. What channel would truckers use? I heard it is 17 for Calif.

Anyone monitor CB radio? You can either email me privately if too embarassed or say you heard it from your cousin...

Mike

>real question I have.

And since you've opened up the subject.

Where can you get plain 1/4 wave 11 meter metal ground plane base antennas
anymore ?

I want to get a cheap 1/4 wave and cut it to 42mhz to listen to CHP over
distance, but
I can't find any of the el-cheapo 1/4 or 1/2 wave (that are not fancy
fiberglass coaxial sleeve) base antennas anymore.

And no, I don't have time to make one from parts.

Any suggestions ?

I have a Cushcraft AR-10 (Ringo) ten meter antenna that has been modified to operate on 47 MHz (Red Cross). It can easily be lengthened slightly to operate on 42 MHz. If you are interested, let me know.

Inside your radio? ;)

I know the Pro-96 and BC-246 have marine channels as part of their
preprogrammed search bands...

SF Marine channels are the same as all over the country anything particular ?

USCG around here use 21 and 22 / 157.05 157.10
16 is 156.800

do a search bet 156 and 157 most are in that range

I believe he is looking for a utilization chart (vessel tracking, port operations, bridges, etc.). Those tend to be specific to the area.

I don't have such a listing.

Is that who was here. i was hearing that traffic on Alameda PD as well as Alco S.O. Tac 8 today around those times listed 9-12ish.. Was wondering who was in town. I heard "ALCO 1" talking to dispatch this is the S.O. boat that patrols the bay... I also heard talk of a "command post". Heard Alameda city PD on thier Tac 7. not sure if it was related but sure seemed like it. Talk of street closures and whatnot. Geez if I had known i could have looked for the plane arriving or departing Oak.. I work right behind the airport right in the flight path. The S.O. boat was patroling the waters at the end of the runway.. was interesting to listen to as it lasted..

I carry a CB with me on long drives. I know I'm a HAM but, still like radio's and we all started somewhere. From what I was told by some of the truckers around the channels go something like this:

Channel 17 is for North/South traffic
Channel 19 is for East/West traffic

Channel 6 well.....It's still a total loss! Even today!

Channel 9 Hello,Hello,....Echo! anyone there?

I think Bill was trying to make a sale cause I for 1 don't hear zilch on CB. Well, mabey some skip on Sideband from the midwest . even then just a few moments.

for 4 wheeling, CBs is like king. ch 4 is the primary and customery
channel.

curious thing is that i bought ham handheld transmitter and it can do
the TECH class license freqs but not CB or FRS, which does NOT require a
license.

anyways, if you find a caravan of 4wds in the freeway or a road which
may lead to a 4wd area, tune your scanner into cb ch4... or FRS ch4
(sub 4) since they are showing up more and more these days.

myself, when i travel (even when not 4 wheeling), i bring my handheld CB
as well. came in handy a few years ago when leaving vegas, southbbound
I-15 was clogged for hours. and i broke into ch19 and found that a
massive pile ups with several deaths occured... :(

Well, the common ham radio is 2m (144 mhz) and 440 (440 mhz). CB is what,
27 mhz? Quite a broad spectrum. Also, FRS requires different type of FCC
approval from a ham radio. This would increase the price of the radio.

Of course most 440 ham radios CAN do FRS when modified, but that would of
course be illegal. :)

FRS (462MHz) and CB (27MHz) radios are Part 95 Acceptance. These can be modified to operate on ham bands but not the other way around because ham radio equipment are not Type Accepted except factory made (i.e. Icom) which require Part 15 (unintended radiators).

Public safety and industrial radios are Part 90 which requires tolerances tighter than ham gear and I've heard getting type acceptance on Part 90 is a lot of work (which adds expense). Probably the same for Part 95 but yet FRS and CBs are made by the millions so cost per radio is quite cheap. There are some businesses that use FRS instead of a real Part 90 radio (to them they all look the same, why pay $$$$ when you can get two for real cheap at walmart), but that's a different story.

The real diehard scanner fans use Part 90 type radios (Motorola, BK, etc) for general scanning because the performance is very good.

Mike

also, when it comes to FRS, keep in mind that FRS is narrowband and modified ham rigs are operating in wideband. a wideband FR transmission will sound muted or very soft on the audio side through an FRS rig (unless the front-end in the frs radio is cheap and just demod's everything it hears, regardless of it's wide/narrow status).

Heck, I think I was in that back-up on I-15. I was in one where a Semi and RV tangled it up oustide of Baker, CA and well lets just say the Semi won. The RV had a boat on the back and from what I heard 5 people in the RV didn't make it. The Back-Up was for hours and everyone was just parked on the road and outside talking and walking around. Thank goodness it was in Jan. If it was during the summer the heat can get up to 118 out on I-15 in the Mojave Desert. There is no where to go out there either. By the time the traffic started going it was 3 hours later and when we drove by the accident scene there were yellow tarps all over the place and just a heep of debree where the RV was. You could make out some sort of trailer where the boat used to be. Didn't have my CB then only Nextel. It was ironic. I called my friend who was at home in Portland Oregon and he went on the internet to check the CHP page to find out what was up.

Anyway back to the subject. The CB around the bay area used to be really busy until at least for me the late 80's / early 90's. I blame it on Pagers,Cell Phones, Internet. But Hey, now's the perfect time to use the CB.......There's know one on it! 40+ channels. The FCC gave up on CB years ago. So it isn't enforced at all. Yes, I know. But hey I see a reverse going on. People are fed up with prices of all the cell phones,Internet so they are using cheap comms. Hence CB,FRS,MURS,HAM and so on. That's my thoughts but hey just this is Bayscan and I'll be wrong or 1 uped....LOL

39214. School lockdown

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-04-29 21:44:55 UTC
From: Jordan Hayes
Topic: 39214 Message: 39214

Remember: when burritos are outlawed, only outlaws will have burritos.

http://news.yahoo.com/s/ap/burrito_lockdown

School Mistakes Huge Burrito for a Weapon

A call about a possible weapon at a middle school prompted police to put armed officers on rooftops, close nearby streets and lock down the school. All over a giant burrito.

Someone called authorities Thursday after seeing a boy carrying something long and wrapped into Marshall Junior High.
The drama ended two hours later when the suspicious item was identified as a 30-inch burrito filled with steak, guacamole, lettuce, salsa and jalapenos and wrapped inside tin foil and a white T-shirt.

"I didn't know whether to laugh or cry," school Principal Diana Russell said.

State police, Clovis police and the Curry County Sheriff's Department arrived at the school shortly after 8:30 a.m. They searched the premises and determined there was no immediate danger.

In the meantime, more than 30 parents, alerted by a radio report, descended on the school. Visibly shaken, they gathered around in a semi-circle, straining their necks, awaiting news.

"There needs to be security before the kids walk through the door," said Heather Black, whose son attends the school.
After the lockdown was lifted but before the burrito was identified as the culprit, parents pulled 75 students out of school, Russell said.

Russell said the mystery was solved after she brought everyone in the school together in the auditorium to explain what was going on.

"The kid was sitting there as I'm describing this (report of a student with a suspicious package) and he's thinking, 'Oh, my gosh, they're talking about my burrito.'"

Afterward, eighth-grader Michael Morrissey approached her.

"He said, 'I think I'm the person they saw,'" Russell said.

The burrito was part of Morrissey's extra-credit assignment to create commercial advertising for a product.

"We had to make up a product and it could have been anything. I made up a restaurant that specialized in oddly large burritos," Morrissey said.

After students heard the description of what police were looking for, he and his friends began to make the connection. He then took the burrito to the office.

"The police saw it and everyone just started laughing. It was a laughter of relief," Morrissey said.

"Oh, and I have a new nickname now. It's Burrito Boy."

> > Mike

The only problem with most LMR (Part 90) transceivers for monitoring is the limited scan lists. Our XTS5000 radios only allow for 16 talkgroups in the scan list. The XTS3000 only allows for 10 TGs in scan list. My Kenwood TK-350 portables will scan from 2 to all 32 channels. My 210 ch BK VHF H/T can scan only one 14 ch group at a time, or all 15 groups at once.

I can also say that the sensitivity of my PRO-96 is quite good. Much better than any other scanner I've owned.

That's me. :)

Bendix King VHF 210 channel VHF (also used as a two-way), Yaesu FT-60 ham radio as ham radio and scanner, Motorola STX 800 mhz HT, and a GE MPS UHF T-Band.

The VHF portion of BAYMACS is NALEMARS, which I believe is channel 5
in CHP handhelds.

CHP did not have BAYMACS for the 10851 V.C. police vehicle in Los Gatos/Campbell earlier this week. That is why the CP asked for a CHP officer so they could relay information on their own radios. I know this as I heard it first hand while listening to the detail.

As follow-on to what Jim wrote, the public's perception of a tranquilizer dart's mechanism of action has been skewed by popular media's depiction that an animal drops within seconds of being shot. As Jim noted in passing, it is a difficult shot. Even if the shot were perfect, the instant efficacy that is shown on TV and in the movies is not the case.

Don,
What does that mean, to not be a BAYMACS participant? Is there a PL
required to access the system on the NALEMARS side?

CHP has CLEMARS in their extenders, but I don't believe they have NLEMARS,
which strikes me as quite odd since they do VIP protection and are the
"state police" agency for California.

Either that, or the officers have no idea that NLEMARS is BAYMACS.

That was obvious... but not to the 9/11 self important yahoo's... everyone is a potential terrorist and don't you forget it! Besides "they" monitor bayscan for just such information. AND be sure to forget the fact that most illegal transmissions are from lost/stolen radios. Like the SF cop that left his radio in the trunk of his car and took it in for service. How long do we have to keep hearing from these people and when can we all come out of our bomb shelters???

Ham radios nearly always have crappy specs out of band.

Getting back to the other question, parts 95 (and I suppose 90 though I never looked) are FCC specs. Parts 15 is often quoted. It refers to unlicensed radios, or transmitters in general to be more correct.

well, they are not supposed to use FRS (those freq are for families, not business). Perhaps someone should make a citizen's arrest. Why a business would use cheapy FRS instead of a real radio, but then many figure FRS, XTS... what's the difference so just get the cheapest set.

Here is the story about that call I posted yesterday. There is also video there:

Hurt When Cars Crash into Hair Salon

Posted: April 29, 2005 at 4:19 p.m.

TIBURON (BCN) -- Tiburon police said the woman struck by a vehicle that crashed through a hair salon Friday afternoon is being treated for head and lower body injuries at John Muir Medical Center.

Capt. Dave Hutton said six people were injured when the throttle of a Cadillac reportedly got stuck and the car drove through the parking lot of the Tiburon Playhouse movie theater and struck a parked BMW, pushing it into Lancer's Hair Salon on Juanita Lane around 1:19 p.m. The Cadillac also came to rest inside the hair salon.

The 75-year-old driver of the Cadillac and his wife, two people inside the hair salon and another pedestrian in the parking lot were also injured.

The woman now at John Muir Medical Center was hit by the car, rolled onto its hood and was pinned between the Cadillac and the BMW when both vehicles crashed through the hair salon, Hutton said.

The driver and his wife were able to give statements to police, Hutton said.

I don't believe the FCC would consider Sony Corporation's retail communications to qualify for the Personal Radio Services.

From the Industrial / Business Radio Pool page:
http://wireless.fcc.gov/services/ind&bus/index.html

"Licensees in the Industrial/Business Radio Pool use radio to support business operations. Their communications systems are used for support of day-to-day business activities, such as

That being said, a frequency coordinator (ITA) filed a NPRM with the FCC asking that FRS not be allowed to be used in a business environment. The FCC replied that it was OK to use in a business environment and denied the request.

I'll look up the notice for you if you want to read it.

I personally disagree with the notice, one more brick taken out of the wall of responsible radio operation.

So imagine you're the IC and you have to make a choice between killing thr animal when it's up in a tree and no danger to anyone or you try to tranquilize it and then end up with cops running all over the neighborhood plugging away with their AR-15's trying to get the cat as it runs. Most cops don't practice for big game hunting on the range and no IC in their right mind would make that kind of decision.

Regards, Jim

San Jose Fire is on scene at Willow Street and Meridian Avenue for natural gas leak that is blowing off manhole covers. There is also a smoke investigation in progress in the area.

CP is located at 915 Meridian Avenue. Evacuations in progress between Minnesota and Willow.

PARTIAL LIST OF UNITS:

COUNTY HAZMAT 2 (Mutual Aid)
HIT 29
TASK FORCE (?)

SMOKE INVESTIGATION UNITS:

TRUCK 29
BATTALION 29

San Jose Command 3 - 154.115

More to follow.

Just returned from this incident. Per SJFD Deputy Chief four manhole covers were blown approximately two feet in the air after ignition of an unknown flammable vapor inside the sewer system. There were no injuries, but this incident continues on San Jose Fire Command 3 - 154.115. At this time, San Jose Fire has one member from the IDT Team en route as this promises to be a long investigation.

Partial list of units on scene.

COUNTY HAZMAT 2
COUNTY BATTALION 7
ENGINE 6
HOSE 6
HIT 29 A & B
BATTALION 29
BATTALION 1
BATTALION 10
TRUCK COMPANY 29
MED 30
AMR UNIT
AMR SUPERVISOR

This reminds me of something similar that happened to us in Foster City. We opened a valve that hadn't been exercised in years. The resulting pressure shot a nearby man hole cover up 15+ feet in the air. A sewage tsunami engulfed the street. Fortunately I wasn't in the area at the time; some other guys weren't so lucky. Can you say "stinky"...?

I think I may know what SJFD's "unknown flammable vapor" was... hah

That is flat out nasty! Water pollution plant supervisor is making contact with the IC on this call. That is one place I have never had a desire to see - the sewer system. Being a bit on the claustrophobic side, plus the smell, would freak me out.

YUCK!

To bookmark them, just delete the listen.pls and they will then
bookmark. The suffix just opens the player, without it you get directed
to the directory page and can select listen.

Thanks for the input.

That's a rather arrogant statement from someone who probably has no clue about the internal workings of the state's communications systems. If you don't know, which you should, having been on this list as long as you have, Don is one of the top-level comm people for OES, and has probably forgotten more about the state's comm equipment and policies than you'll ever know. If he says he ain't gonna tell, then you don't need to know.

39253. Reality check for all you Code 3 fanatics

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-05-02 08:28:17 UTC
From: Nick in Fresno
Topic: 39253 Message: 39253

THIS IS WHY NOT JUST ANYBODY SHOULD BE ABLE TO HAVE CODE THREE PRIVILEGES. I HAVE TO ADMIT, I JUST LOVE TO STIR THIS SUBJECT UP WITH THOSE OF YOU WHO THINK YOU ARE ENTITLED TO RUN CODE 3 FOR THE WATER COMPANY, MEDIA, MORTUARIES, SEARCH & RESCUE OR WHATEVER ELSE IT IS THAT YOU DO. THIS EMAIL AND PICTURES IS A GOOD EXAMPLE OF WHAT CAN GO WRONG WHEN TRAINED PROFESSIONALS ARE DRIVING CODE 3 AND MAKE A MISTAKE. COULD YOU IMAGINE HOW MANY MORE OF THESE WE WOULD HAVE IF WE ALLOWED ALL OF YOU WHO FEEL YOU SHOULD BE ABLE TO DRIVE CODE THREE BECAUSE YOU KNOW THE SHERIFF OR CHIEF OF POLICE IN YOUR NECK OF THE WOODS.

NICK IN FRESNO - 1:20 HOURS

April, 2005 (Fresno Police Department - Fresno, CA)

The next time you have a code 3 run, think about this. Two different Fresno PD Central units were responding to a Code 3 assist for another officer who had a subject leg bail on them. The first officer was, running code 3, going towards an intersection, against a red light. The second officer was running code 3, going towards the same intersection, with a green light. The first officer ran the red light @ 60 mph and t-boned the second officer going through the same intersection @ 80 mph.

Both officers had been enroute to help the original officer calling for code 3 fill. This accident happened at 3:00am, so there was not a lot of other traffic on the road at the time. Both officers survived, but the officer who was t-boned had to be extracted by the fire department and have metal rods put into his legs. I have not heard whether or not he is going to return to duty or not.

I guess this is a good example of why it is a good idea to clear intersection on code 3 runs. I have uploaded pictures of the second vehicle that was t-boned to the this forum, under "Photos." Please pass this on to other law enforcement friends & family as it is a good reminder/refresher about our responsibilities, when running code 3.

Nick in Fresno

This is the whole essence of the story. If the cop was going 60
through a red light code 3, then he was going 60 MPH faster then he
should have been. The procedure for ALL Fire and EMS agencies in
Fresno County is to STOP at the red light and proceed when clear. This
was not a code 3 issue, this is a stupid cop issue.

the same thing happened here in SF a few years ago when two Patrol cars ran into each other at an Intersection (both going code three and one officer died, his name is Officer John Cook) The sad part was I heard the whole thing and had to do my job and get a Crew on site to get tape for the station (sometimes my job sucks) but hell I work for the Media.

Very correct. Almost every agency I know of their policy is stop and
proceed when safe. As a matter of fact, I can't think of any agency that
doesn't have that policy.

Evan

bcn advises that:

15 people, including three children, were displaced this morning in
a two-alarm
fire at 973 Haight St.
The fire at the three-story residential building required 65
firefighters to control the fire by 1:01 a.m., according to the fire
department. The fire was reported around 12:08 a.m.
The blaze, which caused about $200,000 worth of damage to the
building and its contents, also damaged two nearby structures, the fire
department reported. The structure at 967 Haight St. suffered $10,000
worth
of damage from exposure to the flames and the blaze also caused about
$400,000 worth of damage to the structure at 981 Haight St.
The fire is under investigation at this time. The Red Cross is
providing shelter to some of the victims of the fire.

Jim's active imagination unforunately doesn't
display too much respect for law enforcement officers
training & discretion if he believes that they'll be
running all over the place "plugging away" with their
ARs.

Tim

From: "Jim Cooke" <jjcooke@...>
Subject: Re: mtn lion release

So imagine you're the IC and you have to make a choice
between
killing thr animal when it's up in a tree and no
danger to anyone or
you try to tranquilize it and then end up with cops
running all over
the neighborhood plugging away with their AR-15's
trying to get the
cat as it runs. Most cops don't practice for big game
hunting on the
range and no IC in their right mind would make that
kind of decision.

In case anyone you know purchased one of these and wanted the software for it like I do, this is the latest from the developer of the software:

Personally I like many things about it but dont like the fact that there is no alpha tagging but the sensitivity is great and it has a nice audio output, also I like the display lighting.. For only $150.00 a pretty decent radio.

PRO-2051 UPDATE ANNOUNCEMENT

We have been working very hard to meet our April Deadline for completion of the software for the PRO-2051. However when we originally received the Computer Instructions (Protocol), we discovered that the entire protocol was not sent to us. We immediately wrote Radio Shack and requested the remainder of the doc, but it didn't arrive until the 15th.

Consequentially we are still working on it. We are also experiencing some problems where we are unable to send certain data to the radio, as it will not accept some of the commands. We are attempting to resolve these issues, but must have further assistance from the manufacturer in order to solve them.

Unfortunately this has delayed our projected April 30th release date. It depends on how quickly we can get the rest of the information from the manufacturer as to when we can complete our software support.

To further complicate our projected time frame we are going to Dayton Hamvention and taking an extended trip in order to arrive at Dayton the days of May 19th-21st, so we may not be able to finish our software until after we get back to the office.

We have a number of PRE-Orders in the file, and these have not been billed. If you do not wish to continue your wait, that is understandable. If you cannot wait please email us. Otherwise, we will continue to keep your orders in "queue" until such time as the software is completed and ready to ship.

Shortly after this was dispatched I heard or thought I heard a report on one of my scanners (agency unknown) of someone having seen flares. I HOPE that was a boater somewhere and not a fire-starter.

The key part of the sentence is *Fire and EMS*...
Most cops seem to consider themselves exempt from a lot of things,
anyways. I know a bit about this - I'm a fire/medic, and I see it
happen.

It seems as though fire and EMS agencies have MORE experience running
code 3 responses than law enforcement does (and have less code 3
collisions, too). Code 3 responses are quite different than code 3
pursuits.

This is true. Every response I run on (Med8/Med7) the quick response vehicle it is Code3. Average of 5-8 calls a day. Thats a min. of 20 times a week. Most cops roll code3 maybe once a shift unless you work in SF or Oakland. However take into account that the police cars go much faster and accelerate much quicker then fire/ems vehicles. It is much easier to loose control of a cop car then it is a firetruck. Trust me.. I rode along last night in a city off the Delta (not gonna say where) and the cop i was with fish tailed his car on the way to a 211. I thought for sure we were gonna crash.. I think he was trying to show off.

I have to agree. In the SFPD crash in the Mission District awhile back in which an SFPD Officer was killed , they BLEW a red light . I don't care if they were going code 3 , they were going too fast and didn't slow at the intersection Bad Judgment call.

You probably hear from time to time , Fire units " announcing" they are approaching certain intersections.....Intersections where they know other apparatus may be also approaching from on the other streeet.....safety, safety , safety.

Greetings
This link "may" be of interest to everyone who owns a RS scanner, no matter what model it is. http://support.radioshack.com/productinfo/ProductResults.asp?Name=Radio_Scanners&ID=004001001

I have found it to be a handy companion stored in my "favorite" folder. It has the entire line up of scanner4s from the PRO-20 to current, including manuals, schematics / blow ups of parts, part lists, features, etc.
Hope someone may find it useful. Til later; I'm out...

Per PD driver traing:
Code 1 means at your convince
Code 2 means proceed directly there, without delay
Code 3 means expedite your arrival time

For the PD/FD etc, going Code 2 or Code 3 does not
mean they can blow through intersections or do other
dangerous things.

The PD/FD etc is really asking for permission of the
motorists on the road to go through an intersection or
through traffic fast but with extreme caution. We are
to pull over to the right if safe to do so.

They are to slow down & see if it is clear to proceed
through an intersection. If not, they are to stop &
wait till it is safe to proceed. Hopefully, motorists
see the lights & hear the siren to allow then through
the intersection etc.

Sirens are to be OFF when stopped & waiting to proceed
in traffic. This is so motorists do not try to get out
of the way while stopped at an intersection etc
causing more trouble & to not be annoying etc.

The fire trucks can change the traffic lights, so they do have a slight advantage. There is a GE optical system that most cities use, though in areas of high pollution they have RF systems. [The optical sensors get dirty.] I think Sunnyvale is one of those systems where the fire trucks have a transmitter that can change the traffic light.

To which "PD" are you referring? Code 3 generally means, "Emergency. Respond with red lights and siren."

>For the PD/FD etc, going Code 2 or Code 3 does not

I sorta agree. 21807 VC states, "The provisions of Section 21806 shall not operate to relieve the driver of an authorized emergency *vehicle* from the duty to drive with due regard for the safety of all persons and property."

>The PD/FD etc is really asking for permission of the
>motorists on the road to go through an intersection or
>through traffic fast but with extreme caution. We are
>to pull over to the right if safe to do so.
>
>
I disagree. Vehicle Code section 21806 is not a suggestion or a request for permission. It is the obligation of every driver and pedestrian to yield the right of way to an emergency vehicle responding with red lights and siren. Many people have had their license taken and a DMV Mandantory Retest form handed to them.

I almost did this the other day in Cupertino responding to a Code-3 fill request. The driver wanted to pull to the LEFT (read only a concrete-curbed median there).

>They are to slow down & see if it is clear to proceed

What agency requires this? This sounds more like what I see AMR Units doing when they come upon a crowded intersection and no way to get through.

I hope I'm not coming across harshly. I'm not disagreeing just to disagree. I just see things a little differently I guess.

Mike

Now hold on...let's not generalize everything. Every profession has young "hot shots" who are new to the profession and may taint the profession's image. I'll be the first to say law enforcement has its share of "village idiots." However, let's not let a few bad apples speak for everyone. I'm sure fire/medics have their share too (like the AMR driver who pulled in front of my friend from Palo Alto PD on his way to work on a motorcycle. Turned into an 11-80 and kept him in the hospital for a very very long time). Yet, I don't feel comfortable making the assumption that "most fire/ems...etc. etc."

> It seems as though fire and EMS agencies have MORE experience running
> code 3 responses than law enforcement does (and have less code 3
> collisions, too). Code 3 responses are quite different than code 3
> pursuits.

I think this is an apples vs. oranges issue. The driving dynamics and characteristics of fire and medic rigs is way different than that of a police car. Fire has MORE experience driving fire rigs, EMS has MORE experience driving medic rigs AND cops have MORE experience driving police cars. If you want a comparison you could say cops spend the majority driving during their 10 hour shift. Unless they're in a busy city, fire and ems spends most of the shift in quarters right? The common thread is all three areas are required to drive within their abilities and their training and to drive responsibly. I'm not familiar with fire/ems requirements but in our agency we get 10 hours of intensive emergency/code 3/pursuit driving every 6 months.

I'm not trying to stir the pot or argue, I just want to keep things fair and balanced....

My 2 cents worth,

Chris

Chris, as usual, as very good points. I remember a "lead-footed" driver of a SFFD rig many years ago who got into more than his share of crashes. Although this wasn't young hotshot driver that Chris mentions, he still was a problem considering the number of crashes he got into. I personally was at THREE of these, while they weren't real bad , 2 of them sent people to hospitals. As mentioned it is an apple/oranges discussion which isn't fair to anyone. The other thing is speed, as I recall, the Max speed in SF was 35 mph for fire rigs, not sure if that is still the case. Now SFPD certainly can't hold down their speed in many situations and certainly not pursuits. The higher the speed, the more likely a crash will occur, especially as the pursuit progresses.

Ok, I'm curious now.. How does this system work? I can't imagine the antenna for the rig is directional? And I've got to imagine, it's about 1/10th a watt?

I'm just curious how it knows which way to turn green, and when? I mean as we're always talking about the potential 'terrorists' <grin> - imagine cranking out 50 watts on that frequency - would every light everywhere go green or red?

My guess is intermod or something. I somehow doubt a car submerged in the bay would transmit - once that car went underwater, I'm pretty sure Lo-Jack would cease to work. :)

BTW, I think Lo-Jack is in our building where I work in Pleasanton, I'll have to do some more research. I see white vans with the antenna setup there all the time.

In Santa Clara County, there are four allocations on 465.6125 MHz:

KD48547 County of Santa Clara 50 MO 2W 16K0F2D
WNVC742 Sunnyvale, City of 60 MO 2W 16K0F2D
WNVC743 County of Santa Clara 50 MO 2W 16K0F2D
WNVC744 Santa Clara, Cit of 50 MO 2W 16K0F2D

So each allocation is for 50 or 60 mobile units of 2 watts maximum power, FM modulated data emissions. My (purely speculative) guess would be these would use some simple form of FSK data encoding.

A 50 watt carrier on that frequency would probably *disable* the functionality by desensing the receivers at the intersections. Not harmful from a traffic control perspective but very bad for code 3 responders (and those that are depending on their timely arrival on scene.)

Nice idea, though, for putting that frequency in a scan bank, to get warning of code 3 traffic nearby. Of course, I think that's what sirens are for. :-)

The VHF frequency that Lo-Jack transmits on (173.015 MHz) is very subject to reflections from mountains, buildings, overpasses, even billboards.

At the direction finding receiver, the combination of a direct line-of-site signal and a strong reflection can result in faulty bearings that appear completely unrelated to either. Practice is essential to figure this out when it is happening.

By the way, that's another interesting frequency to put in a scan bank. Once a Lo-Jack transmitter is activated it sends a digital data burst every second. (Non-activated units only do this every 60 seconds, if I recall correctly.)

I've actually heard this twice now.

-Johnathan

More than ten years ago I heard an ambulance radio the Burleson (TX) FD
that they were running code through that town with a heart attack
victim. Shortly thereafter there was a Fire dispatch when the ambulance
T-boned a slowly moving Cadillac at a red light (guy was on his way home
from a private club). The patient was OK -- with acid reflux, not a
heart attack at all -- but as I recall, the guy in the Cadillac wasn't.

More likely than not, these are for the VTA buses. Most of the buses have a small transmitter on the roof that matches the receiver device on the traffic control standards.
I've been to several of the County Fire Stations and have never seen anything similar on any of their rigs. As far as the SO goes, we don't have anything like these in our cars. This would be great to have though.

Its unusual for the SFFD to get a call of a Fire from ONLY the
street boxes ,,,,,very rare........almost always they get telephone calls as
well. It does happen, but rare........and NO this is NOT because of cellphones,
it has been true for many,many years. BUT it still is a disadvantage in
isolated neighborhoods like warehouse areas. I reported a working fire many years ago
where no phones were around and the only way we could report the fire was the
street box.

Brian , any update on this ?? are they back on line yet ??

Sometimes, the signal travels very far. If the direction seemed to
be the Bay, it could have been a Lo/Jack in the East Bay Hills.

2 months ago, San Mateo SO & SMPD spent about an hour on a Lo/Jack
wild goose chase on SR-35 (Skyline Drive) & 280. They found out the
next day that the car had actually been in the Oakland Hills.

I don't know what you're hearing on 173.015, but Lo/Jack uses
173.075MHz.

39301. Redwood City Phase 1 Tac Alert

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-05-04 19:44:46 UTC
From: Tim
Topic: 39301 Message: 39301

About an hour ago, San Mateo County SO initiated a Phase 1 Tac Alert on behalf of Redwood City PD, who are expecting problems this afternoon at Sequoia High School (El Camino Real & Broadway Ave).

Apparently there was some sort of disturbance/altercation involving several hundred people that occured at the school yesterday, and they have reason to suspect it'll be continued this afternoon when school lets out.

Woodside High School requested police (SMSO) presence during their lunch period today, so I don't know if the issue is inter-school warfare between Sequoia HS & Woodside HS, or if everything is just inner-school anxiety as graduation/summer recess near.

The San Mateo County law enforcement mutual aid channel ("Green") 488.8875 should be the main one to monitor. As for now, Redwood PD's main freq of 488.7875/162.2 might be the one to monitor. One of the best freqs to listen to right now if you're close enough is 452.2625 -- a repeater lcoated at Sequoia HS & licensed to the Sequoia-Union High School District.

Yep, sounds like some of the transmitter hunts I've done :-)

Oops, my typo.

> Why do you think non-activated units send out any signals at all?

I have (somewhere on the my computer, digging for it now) a technical manual for the vehicle transmitter, and seem to recall this factoid from that document. Wish I could find it to confirm.

But as I have Lo/Jack in my own vehicle, I do hear it periodically transmit with full signal strength on the LCD on my 796D if I leave it on that channel for any period of time. I supposed it could be a base station transmitter in the area. I don't know how the system-to-vehicle downlink works.

Could be. But the WNVC743 license is has the licensee named as "County
of Santa Clara (Central Fire District)." That would weigh toward the
original assumption.

VTA does have an automatic vehicle location system as well on every bus,
which transmits GPS coordinates (I think) and whatever else on a 489/491
MHz frequency pair. This pops up on my Scout frequency recorder
whenever I'm driving in a lane next to one of them.

Ok, sorry to bring this to the list, but I've just basically been insulted by Ed with some low blows (which I won't mention in the list as they're very immature), and one of my replies to Ed was that previously when I POLITELY asked Ed to quote a bit of what he was talking about, he said he didn't know how. I told him I'd try and find out if he would be aggreable to doing so. He said he'd think about it. So I found out it was as simple as highlighting the text he wanted to quote, then hitting reply. Ed still has maybe quoted ONCE, if that.

So when I told Ed that the last time I asked him politely to quote, that about half a dozen (read: 6) people e-mailed me offlist agreeing that it would help. Ed said flat out "B.S.". So right now, I'd appreciate anyone backing me up who agrees. I won't post Ed's e-mail here to the list unless he gives his OK, but he basically stated that I'm the ONLY one who seems to have a problem with him not quoting, and hate having to go back through the thread to find out who / what he's talking about.

So - if you agree, please stand up and let the group know. Otherwise, I'll shutup on this topic. But I'd appreciate any of the people who e-mailed me offlist (and maybe others who kept quiet) to 'go public' now.

Thanks.

(I'm sure now I'll be put on moderation - but I guess when you run a group, you can 'squelch' those who don't agree with you...)

Well Mike - Ed put me on moderation. Please feel free to copy this post to the list as I doubt Ed will let it go through:

Ed put me on moderation. Quote "Not because you disagree with me but because you stir $h1t up."

I have created a yahoo group http://groups.yahoo.com/group/bayareascanning . I don't have the time to moderate it. Nor do I think I need to.

I will put new 'unknown' users on moderation. I will only put people on moderation for abuse - spam, adult, etc. - not simply because they disagree with me.

I invite others to join - Ed will not be moderator. If this group ends up being successful, I will look for a co-moderator.

If enough people show interest, I'll move it off Yahoo Groups and over to another server - one that has the speed Yahoo lacks.

39310. Bay Area web controllable cameras

Of interest to us scanner geeks...

http://www.nuspectra.com/vbcam/large.aspx

is a controllable camera by the bay. VERY good resolution, VERY good optical zoom (you can read a license plate). We should compile a list of these for monitoring, although this one wouldn't really see anything of interest (i.e. it doesn't have a good enough view of the bridge or a major freeway.)

I'll work on a web page with these, if anyone has any to contribute, let me know.

oh good god.. not another group..... so we have :-(

bayscan
scannorcal
norcalfire
norcalonlinescanning
cencalfire
scanningcencal
scansacramento
eldoradoscanning
and now.

bayareascanning

Men grow old, and the only thing that changes is the price of their toys. :)

There was a website on the east coast that showed a map of the freeways, and you could see colors indicating the traffic speed there, i.e. one color is 0-30, another is 3-50, etc... and clicking on an area would show a live cam. Great idea, I think I've seen it offered here in Cali as a 'service' (aka $$$) but this had it for free.

Movie 1984 ring a bell? ;)

http://traffic.tann.net/ has a similar thing, though it only shows a
regional traffic camera (EB 92 at "Substation A") on the San Jose map
and they are not clickable.

I don't know about the other freqs, but 465.6125 is defintely used (or was used as of a few months ago the last time I noticed it) by Sunnyvale fire units running Code 3 (and probably local AMR units). I can't confirm they actually do anything to the signals (never was in the right place at the right time to verify this), but that is what I assume they do. All I know is when I hear it, there is definitely Code 3 Fire/Med traffic in the area. By leaving ATT set on the channel, I can detect it getting stronger/weaker and thus coming toward/going away from me. And I hear it before I hear the sirens.

I have always had the same question another poster had concerning directionality and how the signal would know which way to turn green. (Is there a switch in the rig to set it North/South vs East/West???)

Jim

A couple of RF consultants I met at IWCE said doppler systems are not very useful. They have had better results using a spectrum analyzer and a handheld yagi antenna. They've used this to track down interfering transmitters on Part 90 freq (one was a Wingard antenna booster on RV).

I have the lo-jack freq (173.075) in my mobile scanner and occasionally hear a data burst (strong signal). If a low-jack activated stolen car is nearby then I know I am near a 10851, but I may not do anything (could get in the way of the police).

Does the spectrum analyzer do anything else other than detect the signal strength? I'm guessing they are prepared for QRM not exactly falling on a channel in a radio, but maybe there is some other trick done with the spectrum analyzer.

I have a few years experience hunting VHF HI band transmitters with a Doppler RDF setup. Like any other tool, it is useful insofar as one understands its strengths and weaknesses.

Dopplers add a degree of convenience and automation to signal finding, and are particularly useful when the transmitter source is intermittent (like jammers). But, they are subject to multi-path error (there are techniques to identify when this is happening but not to correct the error), one must keep moving to "average out" close-in reflectors, and they can be defeated in several ways using modulation techniques. It also takes a long time to become familiar with "what the Doppler is telling you."

Usually I'll supplement things with periodic Yagi bearings (if the signal is continuous or predictable.) There have been times, though, when I've been able to just "follow the Doppler" right to a source.

SJPD does routine training on channel 9 with the bank bag rat traps. They've got some really talented transmitter hunters.

There is a very active group of amateur radio transmitter hunters in the Fremont area, who stage hunts of varying difficulty every two weeks. I'm not active with them much anymore but you can get a feel for what it is like by reading the hunt stories at:

http://www.aeinet.com/kd6dx

You don't need a ham radio license to join in the fun.

-Johnathan

A friend of mine designed and built a really awesome DF rig consisting
of a rotating triband quad, a slipring assembly, and a polar
oscilloscope. I flew second-seat with him on many t-hunts. The system
was featured on the cover of 73 magazine maybe 10 years ago and was
the best DF system I had ever seen or could imagine. The 'scope
painted a picture that made it easy to distinguish direct, reflected,
and phantom signals... I think it got banned from the SoCal t-hunts
because it truly made it no contest. :-D

A 211 is armed robbery. This was a bank holdup.

☐211☐ refers to a section of the California Penal Code. Police dispatchers often use penal code section numbers in their communications, e.g., 187 is homicide, 211 is robbery, 240 is assault, 415 is disturbance (often used for fighting or family bickering), 459 is burglary. Vehicle codes are also used, e.g., 10851 is stolen vehicle, 20001 is hit-and-run with injuries, 20002 is hit-and-run with no injuries, etc.

You can look up the penal and vehicle codes here:
http://www.leginfo.ca.gov/calaw.html

And this is one area that is uniform statewide among agencies because it
is California state law sections. It's not all penal code, though, for
example when someone has "11550 priors" it is referring to section 11550
of the Health and Safety code:

http://www.leginfo.ca.gov/cgi-bin/displaycode?section=hsc&group=11001-12000&file=11550-11555

Let me explain something. We have gone over this before code vrs plain English. For me and some others, a lot of codes are just as common as English. i.e. I have known what 211 means for probably 35+ years. For me to get into a conversation with several others who know the codes as well as I do, using codes is easy and in some many cases I feel more comfortable using them. Compare it to those who are bilingual, most probably prefer one language over the other because they are more comfortable with it. Its not that I am trying to say I am better than those who don't know the codes, but because I have been around them for so long, its just as easy to say (and actually easier to type) the codes that to spell out the definition of codes.

As for as 211 , since its a penal code, it really should be widely known among scanner users since ALL police agencies use it and its not specific to just a few depts.

39340. Re: Sunnyvale incident

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-05-05 21:19:04 UTC
From: philosopher_dave
Topic: 36115 Message: 39340

I agree with Ed. Let me add a bit. The issue of whether or not to use codes comes up every month or so.
Perhaps I'm missing something, but isn't this group for people who use scanners?
When listening to a scanner, one hears codes all the time. How can anybody listen to a scanner and get anything out of it without learning some codes? It's not possible. It follows that anyone participating in a group devoted to scanners should have a familiarity with common codes. Sure, it's jargon. And jargon is perfectly acceptable within a specialized group. Some clarification is certainly required where the codes vary widely from one juristiction to another, but something like 211 is universal. (Anybody who watched Adam 12 knows what a 211 is). What should you do if you don't know the code?
One option is to grumble to the group. Another is to bookmark a list of codes. When you run across one you don't know, do like my mother used to say, "Look it up." And when you look it up, you'll learn something. Here's a suggested URL:

http://www.bearcat1.com/radioca.htm

I don't know all the codes I hear, or all the codes mentioned in this group, so I'm a frequent visitor to this web site.

Hope this helps,
Dave P.

I agree 100%. Not everyone on this list has memorized the penal code or vehicle code or H&S (Health & Safety). I often get confused about the longer codes (23152, 10851). I think as a rule, we should either post the description, or the code and the description.

But remember, you're arguing with Ed. Every other way is wrong. You'll never win. Banned, maybe even.

And it will probably come up every month or so until the end of time.

> Perhaps I'm missing something, but isn't this group for people
>who use scanners?

Yes... But not everyone who is on this group or listens to a scanner
is a 10 year scanner veteran. Some people here joined when they were
given their first scanner a month ago.

>When listening to a scanner, one hears codes all
>the time. How can anybody listen to a scanner and get anything
>out of it without learning some codes? It's not possible.

You're right. However once again, we have newbies. And they'll learn
if we say "211 (armed robbery) at the Bank..."

> It follows that anyone participating in a group devoted to
> scanners should have a familiarity with common codes.

Yes, but once again, people join here to learn. And if we keep up the
attitude of "&*$# the moron who doesn't know every penal and vehicle
code", we'll lose any member who joined to learn.

> What should you do if you don't know the code?
> One option is to grumble to the group.

And for the person who's reading this group perhaps via notification
on a mobile device? Or at a work e-mail, where reading e-mail is OK,
but logging on to yahoo groups and searching the archives isn't?

Let me also make one statment:

Many of you who are these so called 'code heads' yell at other people
when they don't list the frequency or talkgroup, i.e. if someone posts
"Sunnyvale PD working a structure fire...." you'll be the first to
jump down that persons throat with "POST THE FREQUENCY!! POST THE
FREQUENCY!!"

On the same lines that you can google a penal code, you can google the
frequency.

So if we're not going to post what the code means, let's stop posting
the frequency and talkgroup.

OK Evan. You make some excellent points. I committed the either-or fallacy. As you suggest, one can put both the code and it's meaning. That is certainly preferable. But, I submit, it is not the end of the world if someone forgets and just gives the code. One can usually figure out what it is with the resource previously mentioned.

> post the description, or the code and the description.

Well, my comment wasn't really arguing whether we should use codes or not on the list. What I was getting at was that, unlike 10- and 11-codes, which vary widely all over the place between agencies we listen to, the codes that relate to state law are uniform.

So investing time in learning the 10- codes of an agency doesn't make a lot of sense, and using plain text here is more useful, but learning the penal code numbers is a long term investment as they are universally the same. Same for the vehicle codes (10851, 23152, 20002, etc.)

As someone said, jargon is useful as a shorthand. Using it lessens the amount of typing or speaking we do. I'd rather type 20001 than "hit and run with injuries." Worst case would be having to type both of them all the time.

This is a community of scanner listeners. Jargon naturally arises within a community. It's not meant to exclude or be elitist; it evolves because of its utility in communication. Part of joining a community is to absorb these things. Asking what 211 means like Nina did is perfectly acceptable, just as she did a week ago when she asked me what F, N, and VCET units were in my post.

Thank you. :)

I agree, habits will be hard to break, but if someone posts a code,
and then someone asks what that code is, the correct response is
'XXXXX code means blah blah blah', not 'Look it up on google, idiot.'
as has been done here all too often.

Evan

I think Evan has hit the nail on the head. This discussion seems to revolve around courtesy and inclusion versus elitism and snobbery in the trappings of "codes versus plain language." If we want to welcome new people, like that lady who recently introduced herself on one of the other lists, answering newbies' questions rather than condemning them is what we must do.

In case you're wondering, and since one's ethos appears relevant to how his or her posts are received, the Penal code (PC), Welfare & Institutions Code (WIC), and Health & Safety Code (H&S) are like a second language to me.

Topic: 36115 Message: 39353

I learned how to tie a tie thanks to Google. Searching for "police code 211" got me my answer just as fast as "how to tie a tie" did 5 minutes before racing out the door in a suit to a wedding. Heck, even Google corrects me if it thinks I'm wrong "did you mean THIS?" and I humbly think..oh yeah I DID mean that.

I also agree that we need to be helpful to the new people on the list. However, we need to help those that are truely new to the hobby and not spoonfeed those that have been around for some years. Some people on this list are NOT new and it drives me nuts when they ask what a standard code is like 211 just to stir trouble and start threads like this on the list. The same people will then turn around on the fire lists and belt out acronyms like MVA, TGU, BTU, LNF, TC, etc. I keep almost every single e-mail since my first address back in 95 (makes for a great archive to search against...). That makes it easy for me to search who posted what when and where and for how long they've been around. Helps out a lot in moderating these lists to know if a person has been around, or if the new subscriber is just a spammer. I've seen many people "grow" into the hobby, and I see many spoonfed for years.

If I'm going to join a hobby I will put some work into it to at least understand the lingo of the hobby. Scanner listening involves law enforcement and fire of all things. By nature, you will learn FAST what a 211 is or you're going to miss out on some exciting parts of your hobby. The dispatcher is not going to spoonfeed "a bank robbery is occuring at this time" out of your scanner speaker. You need to dedicate some time to your hobby enough that you don't miss the stuff that you wanted to hear in the first place. How long did it take for you to realize a bunch of DTMF tones and 2-tones on the fire channel means a lot of equipment is about to get dispatched so I better pay attention? I enjoy the challenge of learning more about my hobby.

The patience on this list is so thin I can't believe it. I just purchased a Nikon D70 camera and I joined the respective yahoo group, which has 2769 members on it (2000 MORE than Bayscan's current 769). I get 70-100 e-mails a day through that list alone. I simply read what I'm interested in and ignore the rest. I am new to the Digital SLR hobby, and I am humbly going to learn enough so I'm not asking stupid questions 3 years later on how to focus my camera. It's expected you put a little work into your hobby enough to not ask how to focus your camera 3 years later, or what the heck a 211 is 3 years into your scanning hobby. On top of that, the patience on the Nikon list is amazing. The same questions are asked over and over and over and people still answer them. A lot of these questions are answered in the camera manual. READ THE MANUAL and stop wasting our time. If you took the time to read the manual and learn some simple stuff about your hobby, then you will prove

that you are truely interested in the hobby and not somebody who just wants to be spoonfed.

I guess after dedicating so much of my time to maintaining a huge scanner website, moderating and contributing to a lot of scanner lists, and writing monthly articles in a national scanning magazine for new people, I get sick and tired of those that keep mooching and asking for another spoonful.

Jake
I don't even apologize for possibly being offtopic on this list anymore...

I agree with both sides, however I fail to see the huge resistance - and even REFUSAL to post both the code and plain text. I for one type 70 words per minute. Even typing 30 WPM, it takes, what, 3 extra seconds to type "211 - bank robbery"? Even if you hunt and peck, it can't take five seconds to type out bank robbery.

My life isn't scanners. It's a hobby.

And when you're monitoring something, there's clues over the air. I often get confused on 23152 v.s. 10851 - 23152 is DUI, 10851 is stolen vehicle. So for example if I heard "23152, NB 680 JNO Stoneridge. Driver all over the road, seen holding a beer can." So if I put this on bayscan as "23152, NB 680 JNO Stoneridge" and nothing more, I might not be clued in on the fact that this is a DUI.

And as I mentioned, I may not be in a position to read a book or google for a code depending on where I'm reading bayscan.

So why the resistance and flat out refusal to post the plain text along with the code?

Thank you Jonathan AND Jake, I agree with you both completely and it was very eloquently put. I've been listening to public safety on scanners for under 6 months, and I already know 90% of the penal code, vehicle code, regionally relevant health and safety codes (11357 hahahaha), and my ENTIRE local PD 10-code by heart... and I'm 17! I'm not saying this to brag and put other people down who are new to scanning, I just want to clarify that it has to do more with how intrigued you are with listening and how much effort you want to put into figuring out the system of communication your local law enforcement uses, and less to do with how new you are. When I heard my local PD I thought to myself "Holy sh*t I'm listening to my local PD!!!" Thence, I immediately started printing out every list of codes I could find, and wrote down anything I couldn't immediately identify with google (like unit ID numbers).

For me it was like learning a rudimentary new language, but having learned it I can immediately appreciate how useful it is in practice and WHY law enforcement uses it as a shorthand. I love participating in this group because it's a great resource to get minute-by-minute updates on where the "action" is to listen to around the bay, but we have to stop bitching every other week about how someone isn't spelling everything out. I know if I hear a pursuit somewhere I want to listen to it, not type for five minutes about it on bayscan. As a result, I might write a really quick message about it because I want everyone else who happens to be within range not to miss it, but I myself might miss it if I spell the whole thing out to everyone. It just takes too long. I know other people here have been in the same situation, and I always appreciate a heads up on a good chase if I happen to be online and listening. I'd rather hear about it, and have to google a code, or look in "Police Call", or take the list of penal codes I printed out out of my desk drawer and look at it... you get the picture. I'd rather go through that little effort to figure out what's going on then belittle the poster who under most circumstances was trying to do me a favor and taking their time to let ME know about something I might enjoy listening to. That just seems rude and ungrateful to me.

I'd be happy to help newer people (or older people who were just slower to catch on than I was), and I REALLY hope that other older members of the group (many of whom have been listening to their scanners longer than I've been alive) will extend me the same courtesy when I have a question, so the last thing I would ever want to do is bitch at somebody for not being specific enough when they're posting information for my benefit. And what really makes this issue so funny THIS TIME, is that the original poster said "211 at a bank."

What crime usually happens at a bank... requiring a lot of police presence and a search for a subject? Using your intuition and listening to the on-going event (or just using google) will help you a lot more to understand in the short term what asking about on the group will do in the long term.

Really, it's in your best interest to have the codes at least printed out somewhere as a reference because you'll be able to find out what happened a lot quicker if someone neglects to elaborate in their first post. Thanks for appologizing Ben, I see you did while I was typing all that. I wish we could all just get along and talk about the more interesting and enlightening facts about public safety (like how to build our own concealed optical traffic light-changer LOL!!!), rather than griping about how someone didn't use proper online etiquette every day. :-)

-Inigo

P.S. - Since I mentioned the online etiquette griping... I'm really happy I don't recieve group emails like everyone else, because I'd hang myself from hearing Evan complain about ED all the time! You both seem like good people, and it just seems like a lot of off-topic mellow drama and I for one don't care! (The worst I've ever seen Ed sound in a post is grumpy, and I don't see why people would take it so personally.) I beg you: Work your personal differences out by yourself and don't repeatedly email over 700 people to bitch about ONE. Thank you.

39360. SJFD - Smoke Investigation

My only point would be.. Not everyone is a PD nut. being a fire nut i can resite everything fire.. but of course fire uses plain text, which btw LE dispatch centers are slowly starting to go to... So for those of us who don't eat and breathe pd we don't, nor should we have to memorize 10 or 11 codes which are different for every dept....

Like Evan stated so eloquently.. why the big refusal to just use plain text and or both?

I live by the Sunnyvale Town Center and by Murphy Street.. I'm at work in Pleasanton. Should I put on my bullet proof vest before going by murphy street?

And keeping somewhat on topic....

I drive down east washington avenue in sunnyvale past the town center and murphy. And on friday saturday and sunday nights, they have people just hanging out on the street.. And quite often drunk or just plain idiots on the curb standing VERY close to the street or often flat out IN THE street. And I don't want to be rude and honk my horn... but "Security" (who knows who - yellow raincoat with SECURITY silkscreened on it) is just standing there looking stupid.

Part of me says "Honk the horn. Get the moron to move."
The other part of me says "Murphy street - bad idea. They probably are carrying AK-47's."

I never tried to discourage that, I just don't think it's fair to slam people when they forget, or when they don't have time, which I said in my previous post. Ed might feel differently then I do, in which case he'll continue to use codes only and laugh demonically knowing the fire nuts won't immediately know what's going on. :-) I understand where you're coming from now, and I think we should all just help each other as much as possible so the guy who knows about LE codes will explain them to the fire guys and the fire guys will explain the different strike teams and their roles that are talking on the fireground channel of a working fire. Alas, not everyone's going to do that so let's cut our losses and stop caring so much when they don't.

Here are the Santa Rosa PD Freqs I have, I haven't been up there in a while though (Nina help! :-)):

Ch. 1 - Dispatch: 460.375 (PL 127.3)
Ch. 2 - Records: 460.05 (PL 127.3)
Ch. 3 - Tactical: 460.025 (PL 127.3)
Ch. 4 - Tactical: 460.20 (Unsure if there's a PL on these)
Ch. 5 - Special use/Tactical?: 460.50

39375. Cinco activity around...

S.J.P.D. is active with many plates and ID's being run. SJSU is also active with many calls. Also I believe The Riot in Richmond is winding down.. At one point I heard CHP were sending units from Marin with 2 officers per car. Wondering if S.J. will get rowdy later tonight?

The Emtrac radio-based traffic signal pre-emption system is the most common RF-type system, at least here in the Bay Area. Here's a link to them: http://www.emtracsystems.com/home.html

In Marin, many of the major thoroughfares (like urban Sir Francis Drake Blvd) have Emtrac receivers at the signals. San Rafael has deployed the system, too. The Emtrac transmitters have directional controls (N-S, E-W) in the cab, and most units have an electronic compass module for the *Auto* mode.

The RF-based systems seem to be falling out of favor, and the strobe light-based systems (3M Opticom) seem to be on the increase. My dept has been using Opticom since the mid '80s. Depts like Las Vegas Fire have been using Opticom since the '70s.

The Opticom system is generally less expensive (short and long term). It is easier to add vehicles to the system, compared with Emtrac. Opticom also (from my experience) allows for better multiple control (multi-directional responses) of a single intersection.

FWIW, I've been on Murphy street and heard gun fire nearby.

The best Sunnyvale Town Center PD call I ever heard was an attempted stabbing in the parking lot. The woman wore a cross under her clothing and it blocked the knife. That sure beats BVM sightings. [Hey, sorry about the code, make that Blessed Virgin Mary sightings.]

Given the propensity for cities to fail to keep up with FCC licensing, I could see optical systems being more popular. Perhaps the "window" cleaning isn't as much of an issue.

I had heard that at one time motorcycles had flashing headlights, and these lights could trigger the opticon sensor. This could be urban legend.

When the Opticon issue came up the last time, I found quite a few patent on-line should anyone want more details on how the system works.

Getting back to cities not keeping up with licensing, I recall from lunch with Kelty that the city of Tracy either had a license stolen or stole one from another city that let their renewal slip.

I remember one night driving past it, (I live about 2 blocks from there) and as soon as I stopped my car at my house heard a dozen sirens. Turned on PD, and there was a report of a stabbing by a guy with a gun.... missed it by >< that much.

>The best Sunnyvale Town Center PD call

Hey, they ain't no PD! :) "WAVE" Security is their name, technically (Walking And Village Entertainment). Heck, at one time I more or less had radio privileges and a callsign on their channel - off hours at least. Some nice guys there though. Kinda funny, they have a autopatch system (telephone hooked up to a radio - so you can dial out or get calls in) and my home phone number is VERY close to their number. Never got a accidental call for them though.

I think what I heard was a real PD call, however I am quite familiar
with the phone patch at the mall. The phone number could be obtained by
shall we say "social engineering", then one could call security and hear
ones voice over the scanner. I could say more, but I don't know the
statute of limitations. ;-)

OK, two words: protein spill

From: Robert Sanford
Topic: 39388 Message: 39388

Here is one re-cap of went on last night in Richmond, I also heard stuff going down in Oakland also:

Cinco de Mayo Celebrations Get Rowdy in Richmond
May 6, 2005 11:28 am US/Pacific

Some Cinco de Mayo revelers got out of hand in Richmond Thursday night, as hundreds of partiers came out to celebrate the holiday.

Police say as many as 1500 people were involved on the melee on 23rd St. Bottles and rocks were thrown -- some at police -- and car windows were smashed, including some vehicles at a dealership. Police shut down a mile of the roadway as they tried to shut the party down.

No serious injuries were reported, but several people were arrested.

39389. Re: [bayscan] Cinco de Mayo Celebrations Get Rowdy in Richmond

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-05-06 20:52:05 UTC
From: caladded@aol.com
Topic: 39388 Message: 39389

Both KGO and KTVU mentioned they expect the celebration to continue thru the weekend. So those who can get Richmond might want to monitor them tonight and tomorrow night . RPD is supposed to double their forces tonight and I wouldn't be surprized for them to have some other depts assisting. So CoCo S/O might be interesting as well

Coast Guard Open House - May 21 at Station Golden Gate

U.S. Coast Guard Station Golden Gate will be holding their annual open house on Saturday, May 21 from 10:00 to 3:00. Proceeds from the sale of hats, shirts and patches will go into the station morale fund. The event kicks off Safe Boating Week and includes rescue demonstrations and boat tours as well as a BBQ, face painting and Kid Care ID.

Station Golden Gate is located near the north end of the Golden Gate Bridge (Marin side) on Horseshoe Cove. Exit Highway 101 onto Alexander Avenue and take the first left as you head down toward Sausalito proper and follow the Coast Guard signs. For more info, contact:

USCG Station Golden Gate
435 Murray Circle, Sausalito, CA 94965

San Jose PD working a stabbing at 819 State Street, Victim has five stab wounds to the upper body.

Second crime scene is in front of 148 Alma at the Alma Liquors for unknown circumstances involving a lot of blood at the scene.

Third scene on First Street and Oak for a subject down with unknown wounds. Details sketchy, but there appear to be at least two victims and at least two suspects.

Partial list of units working these scenes:

57L1
51L2
51S2
51S6
51L6
56L2
8783
5L10

Working on San Jose PD channel 6 - 460.325

Hearing now that this is most likely gang related.

Nothing further unless conditions warrant.

AFAIK, there'd be no reason to necessitate a peace officers presence,
unless it was a concern of safety for the medics, i.e. subject may want to
die, and decide to fight the medics. Then again, I've been wrong before. :)

A dying declaration is admissable in court. I found this online. This could be a rason why the officer was with the patient in the back of the ambualce. Also Evans reason could also be a possibilty.

Dying Declaration
n. Statement made by a mortally injured person, indicating who has injured them and/or the circumstances surrounding their injury. The injured is aware that he/she is about to die and while the declaration is hearsay, it is admissible since it is believed that the dying person does not have any reason to lie.

I am disbanding this group. I created it in an attempt to spite Ed, but a 'competing' group would more spite Robert, which is not my intent.

My offer to create a group still stands. I'll host it on my mail server running on my computer, so the group will generally be faster than yahoogroups, but not 100% reliable (I have to reboot my computer every once in a while).

So I'm open to suggestions... I'd rather not have a group which is already duplicated by 40 other yahoo groups.

How's about we just let Ed be Ed and go about posting things related,
at least most of the time, to scanning in the Bay Area? It seems we all
have our little quirks and it might be better for all concerned if we
just learned to live with them.

Just MHO, of course. :)

Regards, Jim

P.S. I never heard anything about any S.O. or PD unit being burned up
here so I'm at loss about that one.

If you have one of these two units and have been disappointed with the VHF performance when using a roof mounted antenna, I may have found a cheap solution. I have a dipole on a 30 foot mast and my Pro 96 couldn't receive any of the local NWS stations unless I used the attenuator. Lake and Mendocino Counties, which used to come in just fine with my old Pro 2046, were either non-existent or just above the noise floor. It seemed pretty obvious that the receiver was being overloaded by that better antenna since it worked fine on the NWS channels with the standard rubber duck. Thinking that it might be commercial FM that was overloading the front end, I blew $6 on a Radio Shack FM trap (http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&product%5Fid=15-577). You may also need to spend a few more bucks on BNC to F adaptors if you're not already using F terminations on your antenna cable and a three foot length of cable with F connectors at both ends, assuming you're not like me and have tons of that stuff left over from previous TV installs. :)

Well, folks, the difference was like night and day. I can receive all the NWS stations loud and clear without the attenuator including the Ukiah station on 162.525 that I wasn't able to receive at all previously. Lake and Mendocino now come in like gangbusters. My UHF performance also seems slighlty improved and I haven't noticed any degradation on low band or 800 mHz trunked systems. The air band also seems to be about the same although it's deaf from about 108 mHz to about 115 mHz, a side effect of the FM trap. If you have a "hot" receiver like the Pro 96/2096, the FM trap might be worth a try, especially for those of you how live closer to the City, where the overload problems must be much worse.

Regards, Jim

I'll join any group that doesn't do fire. Oh, those calls about people who can't breathe make me lose my breath. I'm trying to think of the Jerry Garcia quote, but it goes something like "The Grateful Dead are like licorice. Not everyone likes licorice, but those who do like it like it a lot." That is how fire goes. You get a dumpster fire, it gets 20 posts. People into fire are really really into fire to the point where it makes me do the Spock eyebrow raising routine.

I think we trying to do a group for breaking incidents at that didn't fly. Still, I thought that was a good idea.

That is the beacon side of the air band you are losing, which is not a
big deal to most people.

IIRC you are in the north bay. I'm trying to think of what FM station
could be causing the interference and the only one I can come up with is
the transmitter site in the Marin headlands at N37 51 03.6 W122 29 52.8.
The FCC database has KDFC, KISQ, KLLC, KSAN, and KSOL located there.

Um Evan, I am not sure what you mean by saying you created this group? Last time I checked, I thought Robert created all the groups? In any case, take it easy and settle down... People need to stop being so offended about what all is said here. It is easy to hit the erase button, so lets not go dumping a good thing (Even though I question whether or not you even have the power to do so in the first place?). If you don't like something someone says, either reply with your opinion or just delete it(IT'S NOT THAT HARD SO FIGURE IT OUT). Who cares if some topics go off topic everyonce in a while. For the most part we are on topic and usually when someone brings something up off topic, most of us enjoy it because it deal with some sort of public safety issue, which is really what this group is all about if you think about it. Yeah, yeah, yeah...I know "Only scanning" but come on, if this forum was really only strictly about scanning, it would not have half the members and participation it does. I mean really, which topic do you really enjoy better: what talk group ALCO is adding to their 800MHz trunking system this week, or a pursuit that ends up with an officer involved shooting and vehicle fire as result. It's never going to be perfect and people will have different opinions than you do about various topics, last I heard, that's life. If this scanning forum is really getting you that worked up, then maybe it's time to take a break from the whole Bayscan thing for a while (Although I hate to think that anyone is that wrapped up in this). Remember, it's a Scanning and Ham Radios are a hobby not a way of life. Just think, at least we're not talking about politics or religion...Talk about a difference of opinion, I think we'd have to issue a Code 33 on Bayscan if that ever happened...

Relax...Go have a Coke and a smile,

Nick in Fresno - 06:26 Hours

39430. Help Save Hanger One!!! --- FAF Moffett Field, Ca (OT)

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-05-10 17:47:46 UTC
From: blueangel_78
Topic: 39430 Message: 39430

Friends, Aerospace Enthusiasts, Former Moffetteers,
Shipmates and Silicon
Valley History Fans,

I have it on good authority that one of the ultimate
solutions being
proposed by the Navy (with NASA's tacit concurrence)
to solve the PCB,
Asbestos and Lead Paint issues related to historic
Hangar One at Moffett
Field, is to completely demolish this unique building
and icon of Silicon
Valley. They feel it is their best option for
completely ridding themselves
of these pesky problems so they don't have to deal
with them again in the
future. It may sound ludicrous, but the environmental
types promoting this
action don't seem to be particularly worried about its
historic value or
potential future use as a museum. The reason for
their haste is that the
temporary paint job the Navy put on the exterior in
2003 (at a cost of over
$2 Million), to encapsulate the PCBs and keep them
from leaching into the
storm sewer, is due to exceed its usefullness within
the next 2 years, so
they want to move forward with a final solution ASAP.
Aside from costing
over $30 Million, the demolition solution would
absolutely kill any efforts
by the California Air and Space Center (CASC) or any
other organization
interested in using this wonderful (and irreplaceable)
building to preserve
the history of the Navy, NASA and the area, or use it
to promote aerospace
education.

I urge you to attend the next meeting of the Navy
sponsored Moffett Field
Restoration Advisory Board (RAB) on Thursday May 12th
at 5:00 p.m. in the
Mountain View City Hall (4th Floor Gallery) at 500

Castro Street in Mountain
View. The RAB will be also be conducting a bus tour
of the EPA cleanup
sites at Moffett Field before the meeting including
Hangar One. Please also
pass this along to anyone you think would be
interested in helping save
Hangar One.

If enough concerned citizens and organizations voice
their opposition to the
demolition option, the Navy (and NASA) may be
persuaded to choose one of
their other options. The other options range from
continued encapsulation
with paint, to trying to just remove the toxic
materials from the hangar's
sheathing and framework (sandblasting etc), to totally
removing the exterior
sheathing and conducting a cleanup of the framework.
All of these other
options at least offer the CASC or others the
opportunity to restore the
hangar to its previous appearance and reuse it for
historical or educational
purposes, but demolition should not be one of their
options.

If you cannot attend, you can also voice your
opposition by writing to the
RAB in care of the Navy's Environmental Office of
their Southwest Division,
or NASA's Environmental Office at:
NASA Ames Research Center
Office of Safety and Quality Assurance (QE)
Moffett Field, CA 94035-1000
Attn: Sandra Olliges

I hope to see you there,
Carl Honaker
Former NAS Moffett Field Executive Officer
Life Member and former President of the Moffett Field
Historical Society

Gary,

I'm not sure where the FM transmitter overload is coming from either. We've got KZST at 100.1 mHz and KXFX at 101.7, both of which have 46 watt repeaters located about two miles from my home in Petaluma. KZST's main transmitter in Santa Rosa isn't all that far away either and it's 6 kW. Whatever the case, it was enough to cause a major desensing of the front end of the Pro 96 on VHF when hooked up to my outdoor antenna. I've also got a Pro 2096 and it had exactly the same performance before I installed the FM trap so it wasn't just a bum radio. I figured six bucks was worth it for an experiment and it turned out very well.

Regards, Jim

Well, here's what everying is 'sweating over'

http://www.g2mil.com/2005.htm

Just remember this is the list they'll probably draw from, as Gary
points out, we won't know who gets picked until later.

You're the second person who posted such a problem. [The other is on the GRE list.] I know someone in Vegas with a J-pole cut for the civil aviation band who uses a 2096 without any problems. You would think the j-pole would be a worse case scenario.

If it was just one transmitter, you can make a filter with a BNC T connector and an unterminated coax line on one side of the T. I think you cut the unterminated line to 1/4 wave of the interfering signal, compensating for the velocity factor of the coax. [I'm sure someone will verify the wire length.] This puts a deep null at that frequency.

The broadcast (which was on CLERS) said 1817 hours. There would be no way inmates could have gotten out if they rammed that door, because there is still 2 doors behind that one. I work next door and will check out the damage if they don't show it on the news and give you guys a report.

I may have confused my self. The broadcast was probably 1841 hours
like you said...but the dispatcher said the incident occured at 1817
hours. I'd have to listen to it again but I can't at work right now..

From the FCC database
WPQB286 464.8125 469.8125
WPWC341 467.85 467.875 467.9
All have expired in May. Either they went nextel or are transmitting
illegally.

Just an FYI, security is often not listed under the name of the organization, i.e. facility, but is often some rent-a-cop outfit. In other words, The Buck Center might be customer 123 of Atlas Security as an example. These security firms do their best to hide the identity of the clients on the radio, so figuring this out generally requires getting a look at the security guard to see a badge.

Yep, Atlas is actually a prime example of this, and I know they've been doing it for over 10 years. They also used 2 and 3 letter alphas for fixed post designations (desk posts, or stationed guards). They've always had the money and had nice vehicles. Must do pretty good business.

Oh, the whole reason for this much security is that they were often targets of other security companies listening into their freq. The companies would hear the calls and try to jump them. They'd use this tactic to steal the client by portraying themselves as a faster responding agency.

39474. Saving Moffett Fields Hangar One

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-05-12 09:21:32 UTC
From: aviationplusphoto
Topic: 39474 Message: 39474

Please show your support for Preserving Hangar One !

Friends, Aerospace Enthusiasts, Former Moffetteers,
Shipmates and Silicon
Valley History Fans,

I have it on good authority that one of the ultimate
solutions being
proposed by the Navy (with NASA's tacit concurrence)
to solve the PCB,
Asbestos and Lead Paint issues related to historic
Hangar One at Moffett
Field, is to completely demolish this unique building
and icon of Silicon
Valley. They feel it is their best option for
completely ridding themselves
of these pesky problems so they don't have to deal
with them again in the
future. It may sound ludicrous, but the environmental
types promoting this
action don't seem to be particularly worried about its
historic value or
potential future use as a museum. The reason for
their haste is that the
temporary paint job the Navy put on the exterior in
2003 (at a cost of over
$2 Million), to encapsulate the PCBs and keep them
from leaching into the
storm sewer, is due to exceed its usefullness within
the next 2 years, so
they want to move forward with a final solution ASAP.
Aside from costing
over $30 Million, the demolition solution would
absolutely kill any efforts
by the California Air and Space Center (CASC) or any
other organization
interested in using this wonderful (and irreplaceable)
building to preserve
the history of the Navy, NASA and the area, or use it
to promote aerospace
education.

I urge you to attend the next meeting of the Navy
sponsored Moffett Field
Restoration Advisory Board (RAB) on Thursday May 12th
at 5:00 p.m. in the

Mountain View City Hall (4th Floor Gallery) at 500
Castro Street in Mountain
View. The RAB will be also be conducting a bus tour
of the EPA cleanup
sites at Moffett Field before the meeting including
Hangar One. Please also
pass this along to anyone you think would be
interested in helping save
Hangar One.

If enough concerned citizens and organizations voice
their opposition to the
demolition option, the Navy (and NASA) may be
persuaded to choose one of
their other options. The other options range from
continued encapsulation
with paint, to trying to just remove the toxic
materials from the hangar's
sheathing and framework (sandblasting etc), to totally
removing the exterior
sheathing and conducting a cleanup of the framework.
All of these other
options at least offer the CASC or others the
opportunity to restore the
hangar to its previous appearance and reuse it for
historical or educational
purposes, but demolition should not be one of their
options.

If you cannot attend, you can also voice your
opposition by writing to the
RAB in care of the Navy's Environmental Office of
their Southwest Division,
or NASA's Environmental Office at:
NASA Ames Research Center
Office of Safety and Quality Assurance (QE)
Moffett Field, CA 94035-1000
Attn: Sandra Olliges

I hope to see you there,
Carl Honaker
Former NAS Moffett Field Executive Officer
Life Member and former President of the Moffett Field
Historical Society

Yeah, he sure did sound calm Mike. he didn't sound like a new guy.

Another interesting chase the other night by a SF/CHP unit that got into Oakland. Camaro and transAm involved. At one point the TransAm got behind the CHP unit and then PASSED him at 110 !! CHP actually asked OPD to take over the pursuit which I never hear the CHP doing. Vehicle was lost a few seconds later but OPD found it on MLK@ 30th with one in custody and one outstanding.

It had a nice bang to it, with a small cloud of smoke.

Luckily the transformer is at the far end of the parking lot from other buildings... and not
near my car!

SCCo Engine 1 is handling (Truck 1 also arrived/departed)

39485. strange traffic on Richmond trunked system

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-05-13 04:47:27 UTC
From: Jim Gammon
Topic: 39485 Message: 39485

At around 21:34 tonight, Thursday, 05/12/05, I turned on the Richmond system and caught someone saying that they found the lo jack signal around some nursery. They said the name but I didn't get it. Then, dispatch said they had determined that the lo jack signal was actually an air compresser. Did anyone else hear that? Is there any way an air compresser could transmit the right kind of signal on the lo jack frequency? I for one doubt it. Very strange!

Actually, the construction industry is a big fan of lo-jack. Consider how easy it is to hook an air compressor, or a bobcat on a trailer up to the back of your typical pickup truck and leave a construction site.

The Large compressors that you see. They are tan and on trailer of
their own. Worth many thousands of dollars.
The construction industry have been using Lo-jack for many years.
Well i advance of when you or I could by them off the self.

Yeah, I heard an Oakland CHP units talking about it on the bronze , could actually hear the beeping in the background. He said it was S/E of a Colorspot nursery on Garden Tract road in North Richmond . (they had a 2 alarm pallet fire on that street recently). Once CHP dispatch told the officer that it was an air compressor , he went 10-8 leaving it for dayshift. I imagine it could be in some warehouse in the area. I am not familiar with that area but get a feeling its heavily industrial......would be to hard to tract with businesses closed. Sure was different .

I thought I would pass this along it should be funny, I don't want to start a debate but I bet the code guys win:

(Courtesy of Larry Griggs W7MCO)

Tomorrow, Friday May 13th, the Tonight Show with Jay Leno will feature a message sending/receiving contest between a cell phone text messaging team and a Morse code team.

The Morse code team will consist of Chip Margelli K7JA and Ken Miller K6CTW.

Chip and Ken do a lot of contests and DXpeditions. Joe Drago, props manager for the show is KF6OCP.

This should result in some excellent PR for ham radio.

Morse code trumps SMS in head-to-head speed texting combat

Posted May 6, 2005, 1:45 PM ET by Barb Dybwad

Morse code

Okay, the world title for fastest text messaging is still raging in the streets. The victor in the most recent contest was a bit of a dark horse — 93-year-old telegraph operator Gordon Hill delivered a resounding ass-whoopin' to his rival, 13-year-old Brittany Devlin, using Morse Code. Of course, Mr. Hill does have nigh on 80 years of practice under his belt, which was enough to help him triumph even despite Brittany's liberal use of texting slang (Mr. Hill transmitted the chosen phrase verbatim). The showdown was sponsored by the Powerhouse Museum in Sydney, Australia, and the rivals had to transmit the following message: "Hey, girlfriend, you can text all your best pals to tell them where you are going and what you are wearing." Damn straight! Screw the T9, Engadget's switching over to Morse from now on.

It is a bizarre case, not your run-of-the-mill jammer, for sure. What kind of compulsion drives this behavior, to the point of such destructive consequences to his life? (Not to mention the negative impact to everyone else along the way, of course.)

Some sort of psychiatric disorder is involved, I'd guess. Take away the radios, lock him up, and get him a good shrink!

39507. Working Structure - San Jose

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-05-13 23:36:55 UTC
From: Craig Rose
Topic: 39401 Message: 39507

Full 1st alarm dispatched to 10040 Kenilworth at Highwood Drive for a working residential structure fire.

ENGINE COMPANY 2
TRUCK COMPANY 2
ENGINE 16
BATTALION 2
ENGINE COMPANY 19
USAR COMPANY 16
MED 30
BATTALION 1

Working San Jose Command 3 - 154.115

39508. Re: [bayscan] Working Structure - San Jose

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-05-13 23:38:59 UTC
From: Craig Rose
Topic: 39401 Message: 39508

This is a confirmed working structure with Engine 2 on scene unable to confirm that the structure has been cleared - setting up a search, with next due to lay a line from the hydrant around the corner from the structure. Engine Company 2 with two out.

For future info, you can hear Apple Cupertino security on 464.7875
PL D074 (when they aren't using Nextel's).

www.scannerbuff.net

His stuff is supposed to be in a data center and can handle a lot of users,
not a dsl line.

I think that's Teamspeak though.

Otherwise it's stuff like Live365, Shoutcast, and some of the other free
windoze streamers.

Try a google search.

I like the Teamspeak stuff.. especially since you can do text chat at the
same time, and it only takes 9 kbps of
bandwidth to listen to decent audio.

Freaks them out at Starbucks when I listen to an LAPD pursuit on WiFi while
sitting outside sipping a mocha. ;-)

I was in the Fremont Lowes (buyblue.org) and the chopper was over the store making enough racket to be heard inside. I went outside to check it out. I'd say more of a charcoal than a gray chopper and I'm inclined to agree that it is a Huey.

That particular stretch of land has been used for helicopter training in the past.

i thing that they are test something inside as they came over
my house i looked inside with my binoculars the side doors were open
i saw some kind of rack inside with equipment inside i cound not
tell what kind of equipment it was i was just alitte to far away. it
had no markings on the outside it looked like army green to me i do
thing it was army i thing that army no loner has Hueys i thing they
replace them all with Blackhawks the marines still fly the Heuy i do
not thing it was army or marine (no marking of any type) maybe a new
CDF
copter being flight tested because i saw it flying early today with
copter 106 or could be testing some kind equipment for CDF
my guess is a good as anybodys. gary any ideas.

The Huey is still in action. I saw one in the static displays at Nellis
last year.

It has been much debated, but the conclusion is you wear the shiny side
of the foil on the outside. Regarding near death experiences, don't head
for the light. It's a trick. Go for the darkness.

PD is on PD A-9(13104)

Red Cross on 47.420

hams for Red Cross are on:
442.075 (pl100.0)East net
147.105 (pl 103.5 if used) West Net

Fire will use stardard TG's and are NOT part of the event and will
only handle call after the race, Private EMS (I think King Amer.)
will be on site at the polo fields

Based on my years of training and experience, I would agree: Shiny
side out is definately the way to go.

I actually went on one of these calls a few years back. A 5149 (and
two thirds) called and was ranting and raving. Yes, he had foil on
his windows. However, the voices kept coming so being the keen
observer, I told him that he had the dull side facing out. If he
wanted the full protection that foil affords, I told him to switch it
to shiny side out. It was like the best advice he heard in weeks.
Everyone left happy.

-Chris

I did a ride along with AMR a couple years back. We were doing a 5150 john george transport. The guy was billigerant and having halucinations. guy was on lsd and thought his g/f was an evil donkey and decided to come at her with an axe). we had to 4 point him.. the guy tried spitting in one of the medics faces... I don't know if that happened alot to the particular medic in question but he whipped a small toy frog out of one of the overhead bins, placed it on the guys chest. When we got to JG the guy kept screaming "get the evil frog away from me, get it off me. Suffice to say he kinda put the nail in the coffin on how long he was going to be staying at JG.... :-)

Hey I once got one of those packages with a cell phone antenna booster that you place under your battery and a radiation stopper you place over your cell phone earpiece.. I confused the two, and put the booster over the earpiece and the blocker under the battery..
Needless to say, I couldn't get a signal, and within 30 minutes I had enough radiation to glow in the dark, and within a week grew a 3rd arm.

Red Cross was also on their 866.2875MHz Bay Area repeater system, talking about needing more glucose at one of the first aid stations, and BS'ing.

This was the first time I've heard them use it in the year or two I've had it in my radio, other than their occasional multi-day long dead carriers. No CTCSS or DCS, nor any FCC ID heard.

It's good to finally know that having it in my scanners isn't totally wasting a channel -- I assume it'll get heavy use when the next Big One occurs.

39566. Interesting pursuit

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-05-16 09:33:02 UTC
From: caladded@aol.com
Topic: 39566 Message: 39566

Sunnyvale just had an interesting call. One of their alert patrol officers observed 2 vehicles casing some commercial businesses near Fire Station 2 at Arques/ Wolfe. As he started to follow the White RX7 took off but he got the pickup truck stopped and had one in custody with burglary tools. Another officer spotted the RX7 and the chase was on going up Central Expressway at 110mph , on to Middlefield , slightly into Mt.View then back and up Mary and lost near Fremont. Officers spread out and spotted him on Homestead , once again over 100 mph . a Sunnyvale Sgt called it off for speed reasons but Santa Clara immediatly picked up the chase and THEY lost him at Lawrence and Bollinger. At short time later the CHP had a vehicle spinout at The Alameda and 880 and it seems its the same vehicle. As I type they have set a perimeter along with some Santa Clara and San Jose units and looking for a helo.

Good Police work.......they are presently checking the "victim" building for anymore suspects.
for referance:
Sunnyvale 482.9625
Santa Clara PD TG 16
Santa Clara S/O 156.210 (earlier they would have used 155.700 P25) but have no dispatcher for that channel at this time.
San Jose PD 2/ 460.2750
CHP 42.50
0231 hours

lol good post ED. I was listening to this in my truck as I was driving. Busy night! 3 DUI crash's on 101 in marin on my way down, not very serious, and Marin SO looking for suspect in 242 near Marin city. Oh yea and I heard the tail end of Code 33 traffic on Haward. They had 2 at gun point but i dont know why. Suspects taken into custody w/o incident.

This will be the final unless more developes. Not much radio traffic now but sounded like only one Helo was called and Fire arrived on scene. Vehicle was confirmed stolen (10851) out of Vacaville. H-32 was overhead for a while.Now gone. Was curious to find out where they might get the Helo's?? U.C. Davis? or CALSTAR I know UC Davis has a couple.. Well hopefully there is an O.K. ending for the innocent parties involved..

When i worked as a medic in Fairfield for Medic Ambulance we used REACH out of concord off Hwy 4 alot as well as REACH out of Santa Rosa, if UCD was not avalible. So i assume since life flight is no more (which i didnt know until just nbow) those would be the next two choppers they would use.

Anyone catch the details regarding San Jose Fire working an incident involving two patients that may have sustained injuries aboard an aircraft that has landed at SJC? I caught the middle of the event and it sounds like San Jose Fire responded on this as an MCI.

BATTALION 29
RESCUE 20
ENGINE 20
MED 30
ENGINE 5
RESCUE MEDIC 29
USAR 5
USAR TENDER 5

Working San Jose Command 4 - 153.980

Okay, looks like these injuries were related to severe turbulence encountered by the aircraft while inbound SJC. SJC Tower just broadcast a SIGMET (Significant Meteorological Information) for occasional severe turbulence from 25,000 to 28,000 feet, with multiple reports from aircraft.

I can vouch for the wind conditions - blowing pretty hard about three miles from the airport here in Santa Clara.

39572. San Jose Airport Incident - Follow Up

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-05-16 22:43:45 UTC
From: Craig Rose
Topic: 39572 Message: 39572

Final word on this one from me.

San Jose Fire is still working this on COMMAND 4 (153.980) with at least one AMR rig departing the airport CODE 3 with two, including one passenger in c-spine precautions and a second passenger suffering from injured ribs and leg pain. SJFD is working on two additional patients now, making the total from this incident five.

This one might make the news this evening - maybe KNTV if they have their act together.

-C-

39573. SFPD Old 460MHz System radio cache?

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-05-16 20:28:10 UTC
From: Tim
Topic: 39573 Message: 39573

An article by James Dalessandro in the May 2005
issue of SAN francisco magazine compares & contrasts
the 1906 earthquake to a near identical event occuring
today.

Page 68 mentions some specific concerns, one of
which is city & county of SF radio communications --
not enough 800MHz radios to hand out to all the
off-duty public safety personnel called back to
service.

The author's fix for this is "Make sure the police
department keeps its "redundant" 400-megahertz system
and provides units to all off-duty personnel, perhaps
with funds from Homeland Security grants."

The wording suggest that SFPD does still have &
maintain their old radio system network & a cache of
handhelds for such a contingency.

I'm under the impression that most of SFPD's old
400MHz radios were given over to SF OES, which retuned
many of them so that they'd function in the 440MHz ham
band, and thus are not at all ready to be handed out
to
police, fire & EMS personnel immediately after the big
earthquake.

Do SFPD/FD/EMS still even maintain their old UHF
system repeaters?

What Dalessandro has identified is a problem that besets virtually every public safety agency in the country. Jurisdiction budgeteers will not stand for spending more money than it takes to cover day-to-day operations. That☐s why there always has been ☐ and always will be ☐ a place for volunteer communicators with their own facilities to augment jurisdictional systems in times of emergency.

PD, a definite NO. But the lowband radios are still working and in many of the cars and at the substations as a backup (certainly better than nothing).

FD / EMS, unknown, but I wouldn't count on it.

Nice, except the channels were given up to be reused by
other agencies looking to expand their existing systems.

in the event of a system failure SFFD will go to Conventional 800mz and PD goes to its OLD low band radios which are still in the cars.
The old T-band fire freq's went to San Mateo & Marin counties for there new digital systems

So you need to surrender VHF and UHF frequencies, but not lowband?

What is the output PL for this frequency? Is it 162.2?

This frequency is also SJPD channel 13, which is a tactical simplex channel using PL 186.2. I've got this set as my squelch tone, yet right now I'm periodically hearing BPD break through. Or at least I think it is; if I set it the PL to 162.2 it comes through much more frequently and sounds like the same dispatcher.

while i don't have a 'quotable' answer from the FCC rules, i believe that the FCC only would require a surrender of the _primary_ radio systems, and not necessarily secondary like the lowband system.

btw... SFPD was doing simulcasting of "all" calls and other broadcast and high-incident type messages for a while a few years back. i haven't been paying attention lately... do they do this anymore?

As far as SFPD rebroadcasting on low -- band, don't think so. Last time (maybe 6 months ago) I was in the city, I didn't hear that and still have the lowband channels in my scanner.

As far as giving up frequencies..... they don't do it with high band, as Santa Clara Fire still simulcast channel 1 on 153.965 and Sacramento Metro Fire still broadcast on 154.19 and Sac City Fire on 153.89.

I've heard some car thieves will steal a car, park it somewhere, wait a day or so to see if Lo Jack gets activated, and only then come back to grab it for good.

> does anyone have the old SF lowband freq's handy?

45.10 (2nd division: Mission, Ingleside, Taraval)
45.14 (Citywide)
45.58 (1st division: Potrero, Park, Northern)
45.46 (3rd division: Richmond)

Per this site: http://www.keller.com/dan/SFPD/SFPoliceCodes.html

Lot's of cool info, including what SFPDs unit IDs mean (which I was
pretty lost on the first time I brought my scanner to the city).

Sorry , meant " Keller" .....anyway, the URL you posted is a bit outdated although a lot of the information is still current. I noticed it listed Sgts as " 60 " units .....they are 100 units and it listed POTRERO station and its BAYVIEW now.....the URL is probably a good 7 years old or more.

Yeah I noticed the thing about Bayview being called Potrero, it was the only resource I could find the info at though. I didn't realize there used to be a Potrero Hill station, but I could see why. I have a family friend on 20th and Connecticut St. and we visited his house for the first time, and it was kinda sketchy up there. I was monitoring A3 & A4 and there was a stabbing & a few blocks away just while I was there. It's probably nothing compared to bayview & Hunters Point but still enough for this sheltered white boy.

No, it wasn't a Safeway truck. It was a passenger vehicle (and I do mean WAS .....as in USED TO BE) rolling around 100 down Middlefield and somehow lost control , wiped out several trees and crashed into at least 2 vehicles in the parking lot of Midtown Safeway. Couple of the TV stations showed PAPD Still photos and that car was about as 100% totaled as you can image. One dead and the other took PAFD 2.5 hours to extract. I am only wondering if they special called more than one set of jaws for this one. I have been in that Safeway 100s of times and was shocked to see it on the screen. lucky it didn't happen at a different time of day or the death toll could have been a lot higher than one.

Yeah: with the mass exodus, er.. migration to VHF Hi, UHF and 800 MHz,
VHF lowband is quite free in many areas. VHF/UHF/800 MHz is more
valuable for larger radio *systems*. There seems to be little
incentive to retain or re-use lowband for most agencies.

Lowband can work quite well between 110 watt mobiles and base stations.

UCPD detained 5 people. Any one got their freq? H-30 advised only 20
min. left and then they run out of fuel. They will be out of service
re-fueling for 20min. =\

Requesting BPD units now take suspects who arei 10-15 (in custody)
Code3 to Highland Emergency Dept. for the officer to I.D. them.

Im not gonna reply from my email anymore.. good game yahoo taking 5 hours to post... So you may see some double post from me.. but im gonna post on the news group so the info comes across quick =).

yes.. i heard this one from the beginning I think.. I heard a BPD officer
state that he saw a black mustang just come off Hwy 80 onto University at a
high rate of speed. Then right after that he said they turned onto Virgina
Street and bailed out the car.. He put out a description of the suspects and
then moments later called shots fired, 11-99.

---

your probably getting better information from BPD channel . CHP had several
units go 97 at the CP is all I heard plus one unit had an off duty BPD female
officer with them for some reason. did you catch the original call as to why

Sounds like they are trying to sort out some sort of possible kidnapping that occured after the suspects bailed and shot the officer. One suspect they have detained ran into an aparment of someone he knew. He then put a gun to their head and took the occupant hostage. BPD has both the possible suspect and possible former hostage in custody. Possibly an interesting addition to the gammit of crimes these dumb people have commited already. This info is still unconfirmed.

> So you need to surrender VHF and UHF frequencies, but not lowband?

No, not in those terms. It was a discussion topic in the development of the regional 800 MHz plan, and shows the spirit of cooperation between public safety radio system administrators. Those jurisdictions who found the money to totally replace their systems (e.g. Alameda County and San Francisco) consolidated onto 800, and gave up their VHF and UHF assignments in favor of smaller agencies who could fund a one or two channel expansion, but not a consolidated system. Once the 800 MHz Regional Plan was adopted by the FCC, it became a requirement.

Issues with VHF-Lowband include the limited availability of radios (none of the "high-end" manufacturers offer equipment any more).

I noticed that some former SF frequencies were being coordinated for Sonoma County cities a few years ago (see NAPCO logs). Petaluma and Cotati, for example, are now on UHF channels formerly assigned to SF. Don't know how many remain coordinated for use in San Francisco

From: Craig
Topic: 39627 Message: 39627

Don't know if anyone heard the morning reports this morning, but the winter season appears behind us and CDF SCU is now mostly open.

Alma, Del Puerto, Morgan Hill (Station 11), Almaden and Castle Rock are now all open probably to train the seasonals.

Sunol has now activated E1684 and all dozers are being staffed.

Nothing in the FCC rules mandates that a channel be relinquished when
new spectrum is obtained - as long as the existing spectrum remains in use.

In the case of some of the agencies that received 800 MHz channels, they
agreed as a part of the Regional Planning process that they would give
up the VHF/UHF holdings when the 800 MHz systems were brought on-line.

BPD no dogs , considering the liberal politicians , guess that shouldn't surprize anyone , I am sure some would want them to NOT have guns too

Update on the officer as of the KRON 4pm news. They didn't release the officers name , but has been with BPD for 3 years . one of the rounds hit his badge and then vest. He is listed as in fair condition and should recover fully :-) One guy in custody will be charged with 664/187 of a Police Officer ((Attempted Murder))

Originated in San Rafael (Terra Linda near Northgate Mall), unknown wants. Unknown vehicle description. He took off on northbound 101 in the #1 lane at 100 mph. Passed through Novato and he's now presently passing the dumps north of Novato at about 90 mph, coming up on the county line. CHP is planning on taking over, 20 min ETA for H-30 and San Rafael PD will trail after that using their nextels patched to the secondary dispatch.

20:15 Hrs

-Inigo

P.S. I'm recording it all for Robert's site.

San Rafael units:

3x11
3L14
3L34
3L31
3L25

They're still trailing 2 CHP, currently passing the Petaluma Outlets (mall). CHPs going to set up a spike strip... Petaluma PD offering to help set up a spike strip and trying to get Rohnert Park DPS to do one. Going up Cotati grade... unable to tell if the first spike strip worked. Suspect still going at least 90.

It is highly likely that the quarry was blasting again. Hansen does that regularly and when they do they alert County Comm of it way ahead of time. I wasn't monitoring my radio (SO Ch 2) in the office yesterday so I don't know if the County Comm broadcast anything.

Sounds as though SJPD is involved in a search that came about after the
SO was involved in serving an eviction notice and inadvertently
discovering a meth lab.

Partial list of SJPD units working this incident.

5700
5036
2303
8512
8511
5A10
5T10
57T4

Multiple beat units from Patrol are also working this caper.

Hey guys, I got a few emails requesting the audio for this chase. I sent it to Robert Sanford and he's going to post it on his webpage http://www.bayscan.net . If any one else wants it or wants to post it I'd be happy to make it available to them, just be advised the file is 8.1 megs so it's too big to email.

Hmm.

I drive through that intersection (Sta. Teresa & Coleman) twice every day.

I used to take CalTrain to work and would wait at the stop on Monterey road between Ford Rd. & Blossom Hill.

They're also working a missing persons case at the Costco on Almaden & Blossom hill. I shop there every weekend.

Coincidence?

I THINK NOT...

Am I the hidden link between these crime scenes?

You decide!

<slow day, too much caffeine, too much crap happening near my house>

This may very well be a case in which you will need to fashion that
shiny-side-out foil hat for your own personal protection and the
well-being of others.

It is the only way to stop the madness!

;^)

Multiple agencies on scene.
Santa Cruz Co SO
Scotts Valley PD
Santa Clara Co SO
Los Gatos PD
CHP
Estimates at 20-25 total units
Apparently the CHP officer was out on an 11-82 (Veh Accident / Prop Dmg
Only) when he was struck by passing vehicle.
Officer to be airlifted from CDF Alma Sta.
This will likely be my final.

The files reside on bayscan.net, not the bayscan yahoogroup files section.

Just my humble opinion, but I notice quite a few sound files with scanner audio are not efficiently encoded. Not just on bayscan.net, but in general. For instance, the longchase.wav file is sampled at 24khz. Most NFM has little energy beyond 4kHz, so you can sample at 11025 without a problem. It goes from 9.8Mbtyes to 6Mbytes.

The longchase.wav file has a bit of clipping, though not bad. I've seen lots of file on the net that never reach the maximum value because you would need to feed the audio into a sound editor and then normalize it. [Normalize means to find the largest audio peak and scale all the values in the file such that this peak is amplified to reach full scale.

Nearly all scanner files on the net have 120Hz and 60Hz hum. You really can't get around this unless you transformer couple the scanner to the PC. What I do is just filter off the sound beneath 300Hz.

bayscan.net sits on a server with an unusual philosophy. There is no limit to the bandwidth used or the amount of storage, all for $10 a month. That's quite a deal. However, if bayscan.net gets lots of traffic, the server limits the number of users who can download at one time (in simple English, not netspeak). So if you can't reach website, you need to try again.

Subject: [w6pw] BPL, support H.Res 230

From: "Nick Ruark" <nbruark@...>
Subject: Support H. Res 230 - If you thought the 800 MHz debacle was bad, BPL is worse

BPL is an illogical, deliberately misrepresented, and vastly over-hyped spectrum destructive technology....but the FCC and BPL proponents continue to irresponsibly insist it will be a major "third pipe", competing with DSL and cable. If they have their way, HF shortwave radio broadcasts from around the world, ham and CB radio, and many military and Public Safety radio frequencies and systems will be rendered useless.

Please lend your support to House Resolution 230. While non-binding, the resolution urges the FCC to re-examine the Order it rendered in ET Docket No. 04-37 it adopted on October 14, 2004 on Access Broadband-Over-Powerline, or BPL.

Full text of H. Res 230

Flawed BPL is no broadband panacea

By Joe Barr
Tuesday May 17, 2005

Broadband over power lines has been in the news again recently. At one time BPL was seen as the best way to bring affordable Internet access to poor and rural America: an answer to the technology gap between the haves and the have-nots. Now, thanks primarily to boosters like Michael Powell and Kevin Martin, Powell's successor at the FCC, it's back for another go at the broadband access market. But BPL remains a flawed and controversial technology. Proponents in Texas are pushing a pro-BPL bill past confused legislators in Austin at the same time their counterparts in Washington, D.C., are considering a measure to rescind "BPL-friendly" rule changes made at the FCC last fall.

If you listen to the marketing that surrounds BPL, you can understand why it has supporters. Proponents say that BPL will finally bring broadband access to the poor, the underserved, and to rural areas. They also suggest that BPL will enhance the coming "smart grid" technology which someday will replace our antiquated power systems. The third BPL talking point is that once the technology is flourishing, consumers will benefit from increased competition in the marketplace. Lastly, BPL proponents admit that there is a possibility of interference being generated, but that it will be minor and mainly affect only amateur radio operators who live within close proximity to a BPL-equipped power line. Unfortunately, three of the four talking points are untrue, and the fourth is far from certain.

The reality behind the talking points

There are two basic types of BPL: Access BPL and In-house BPL. Access BPL carries broadband traffic into homes or buildings over existing power lines. In-house BPL -- like the popular X10 home automation product line -- works entirely within the framework of the home or building's internal electrical system. All the buzz in the news these days is about Access BPL.

Access BPL is a "last mile" technology. That means that broadband traffic is carried by other means -- optical fiber, for example -- all the way from the ISP to the neighborhood being served. At that point, broadband traffic is "injected" into the power lines that serve the neighborhood.

Once the broadband traffic has been injected into a power line, all that a customer needs to access the Internet is a BPL modem connected to any available electrical outlet served by that power line. From the ISP to the injection point, there is nothing new or unique. From the modem to the routers, computers, and LANs in the house or business connected to BPL, there is nothing new. BPL only exists on that "last mile" of the power line, between the injection point and the BPL modem. (Mostly -- one BPL provider is working on a hybrid solution, using BPL on medium voltage lines, then using wireless 802.11 communications between the power lines and consumers.)

For a more detailed technical explanation, see the paper entitled "Technical Considerations for Broadband Powerline (BPL) Communication," by Robert G. Olsen: http://www.pserc.org/ecow/get/publicatio/2005public/olsen_bpl_paper_feb2005.pdf

Remember the first of the three BPL talking points, the one about bringing affordable Internet access to America's poor and rural areas? It's not true. Perhaps it was at one time, during its infancy, while BPL was still on the drawing board. That was before experimenters learned that transformers can eat the broadband traffic at points between the power plant and its final destination. Now that we know the signal has to carried by other means in order to get it into the neighborhoods being served, a large chunk of the original cost savings have disappeared, and it's clear that the BPL is no panacea for the

digital divide.

That conclusion doesn't come just from those opposing BPL, but from within the industry as well. Karen George, market research director for Primen, a Colorado subsidiary of the utility industry's Electric Power Research Institute, told the San Diego Union-Tribune last December that while the actual costs for adding BPL to existing power grids are still unknown, rural deployments will cost more than urban. That means the same demographics that drive the existing broadband delivery systems apply to BPL as well: optimal profits will come from operations in the areas with the highest population density, and lower profits -- or losses -- will come from operations outside those areas.

Smart grid technology? Nobody even knows for sure just what that phrase means just yet, other than that our existing power infrastructure is not it. Simple meter reading and control communications are handled by BPL on frequencies where it doesn't cause interference with the HF or VHF bands, so if that's your definition of a smart grid, relax. It's here today, and Access BPL for the Internet is not required for its operation. But visionary smart grid technology is a phenomenon whose birth date still lies on the far side of the event horizon. Driven by the catastrophic Blackout of 2003, "smart grid" has emerged as a collective, curative buzzword.

But even if it were real and available today, there is nothing intrinsic to Access BPL that would allow it to carry data any faster or more reliably between different points of the grid than existing broadband carriers.

There is some merit to the BPL lobby's third talking point: increased competition among broadband providers would be good for consumers. The only catch to this one is that BPL must first prove to be at least as fast, at least as reliable, and at least as cost-efficient as existing broadband carriers. If and when that happens, we can all celebrate, because everyone except monopolies know that competition is a good thing for consumers. The problem is that BPL is a long way from being faster, more reliable, or cheaper than conventional broadband access.

But the real killer in BPL -- its fatal flaw -- is the interference it causes. This interference is not, as former FCC chairman Michael Powell and other BPL cheerleaders have claimed, minor. Nor is it just a "possible risk." It is a certainty.

When a signal is injected onto a long, unshielded wire at radio frequencies, that wire becomes an antenna, and it radiates the signal. A power line is a long, unshielded wire. When broadband traffic is injected onto a power line, that signal is broadcast. It interferes directly with radio communications operating at or near the same frequencies the power company uses. I say frequencies, because BPL today uses multiple carrier frequencies to try to raise its level of reliability.

The HF frequency spectrum -- from 3MHz to 30MHz -- and the VHF spectrum - 30MHz to 80MHz -- are the two that would suffer the most interference from Access BPL. These spectrums are used by thousands of public safety agencies: police departments, fire departments, and emergency medical services. They are also used by the military, by government entities at all levels, by ships and planes, and by many other licensed users. The communications of all of these critical functions would be subjected to the interference generated by Access BPL.

BPL performance

There are three problems with Access BPL from a technical perspective: harmful interference, slow speed, and poor reliability. Vendors have tried BPL pilots all over the country -- unsuccessfully. Companies like AT&T and Nortel Networks tried BPL and gave up on it for one reason or another. Other pilots have shut down in the face of complaints of interference. In Texas, TXU shut down its pilot near DFW following complaints from the American Radio Relay League (ARRL). Similar complaints were filed in Iowa, leading Alliant Energy to end its pilot months ahead of its announced schedule. Both firms say there were reasons for the shutdowns other than the issue of interference.

When a power line becomes a radio antenna, it does more than just broadcast the broadband traffic; it also receives radio transmissions. The internal "noise" from those signals appears to cause additional problems for BPL's performance. Tests conducted by amateur radio operators, voluntarily working with customers at BPL pilot sites, have shown that mobile radio transmissions made while parked in the street near a BPL power line -- and using as little as 5 watts of power -- impede the flow of data from the Internet to the home.

According to Ed Hare, the ARRL Laboratory Manager, "The testing of susceptibility done by amateurs did show that as little as 5 watts of power had an impact on the systems tested, but there is no way of knowing whether this would occur on all BPL systems. ARRL has offered to BPL manufacturers and electric utilities to do more thorough testing of this problem, but so far, this is not something that they want to look at closely. Until that more thorough testing happens, the unencouraging results seen so far will have to serve as the red flag that BPL may not work well near licensed radio transmitters."

Carol Arneson and Robert Herbst, both senior managers at business consulting firm Virchow, Krause & Company, LLP, recently wrote a study on BPL entitled "Broadband Over Powerline: A midterm grade." The grades they awarded are as follows:

* A in Politics
* B in Self-Promotion
* D in Technical Performance
* D in Business Model Demonstration
* D in Market Identification
* F in Pilot to Implementation Transition

Giving equal weight to each category, BPL earned a D+ overall. The study notes that the interference issue has largely been ignored in pilots, and that data rates have slipped from early projections of 100Mbps to as low as 10Mbps. They stop short of declaring the technology dead, saying "there is interest and potential niche applications." But they also warn that BPL technologies today are not investment-grade.

BPL legislation stumbles in Texas

It appears that at least one large power conglomerate in Texas agrees with the Broadband over Powerline report's assessment. It's sometimes difficult to follow the BPL action in Texas, even if you have a program. Public committee hearings on SB 1748 were reportedly orchestrated in such a way that concerned citizens who came to Austin from around the state were not able to testify. Even if you did manage to testify, it appears that the committee misrepresented who was for or against the bill. One person who testified on behalf of EFF-Austin claims that her position was misrepresented in the committee's final report. Stranger still, TXU -- the firm reported to have been cozying up to the committee chairman and at least one other member of the committee -- was listed as having testified against it.

Senator Troy Fraser is chairman of the Texas Senate's Business and Commerce committee. He is also the author of SB 1748, "An act entitled relating to the development and provision of broadband over electric delivery systems and the development of enhanced electric delivery systems." Senator Ken Armbrister is also a member of that committee. TXU is conglomerate of electric power related holdings.

TXU recently made it possible for Fraser and Armbrister to attend the Masters golf tournament in Augusta, Ga., by providing them with passes to the event. Since that coziness was made public, Fraser has said he wrote a check to TXU to cover the face value of the passes, which was $300 per day. Of course, street prices for the tickets were much higher, with two-day badges reportedly going for $1,750. And dinner for all his guests the night before the opening day of the tournament was picked up by TXU lobbyist Mark Malone, as was a meeting at the sponsor's tent the next day.

Something happened to the bill along the way, and it didn't make it out of committee without two significant changes. Originally, it allowed electric companies to charge existing customers for their investment in BPL, relieving the companies of shouldering any risk in their venture. That wording was removed from the bill. The second change was the addition of the following section: "Sec. 43.152. COMPLIANCE WITH FEDERAL LAW. BPL operators are required to comply with all applicable federal laws, including laws protecting licensed spectrum users from interference by BPL systems."

Those changes are why TXU ended up speaking against it. TXU has since assured me that it is still behind BPL in general, just not the version of the bill that came out of committee. Apparently either TXU

doesn't have enough confidence in BPL to risk investing its own money in it, or else it feels there is no cure for those interference blues -- or both.

When I noticed that EFF-Austin's Adina Levin on the final committee report as speaking in favor of the bill, I queried her as to why EFF-Austin was supporting Access BPL. She replied:

I didn't sign the testimony card FOR the bill -- if the record says so, they misread the card. I did not get a chance to see the committee substitute before testifying.

EFF-Austin and SaveMuniWireless aren't in favor of BPL or any specific broadband technology. We're in favor of multiple options to increase access to broadband. We're in favor of enabling cities and towns to make choices that are right for the area. And we're against a state ban on the ability of cities and towns to support broadband access.

At the hearing, a representative of a power company testified to the problems in a recent pilot that did not deliver commercial-quality results because broadband performance was inconsistent. If this pilot and other pilots continue not to deliver good results, then BPL won't gain traction in the market.

Clearly interference

In order to learn more about the interference generated by Access BPL, and the techniques being used to try to mitigate that interference, I spoke with Ed Hare, the ARRL Laboratory Manager. Hare has visited 10 different BPL pilot installations to gain firsthand experience with issues of interference. I wanted to learn how BPL providers could tune their systems in order to avoid interfering with critical communications. Hare began by giving a little background information on how most BPL systems work:

The exact mechanism can vary from system to system, but for the most part what they are doing with these systems is some form of multiple-carrier transmission, where they are sending information on a power line on multiple carriers spread across the frequency range, with the expectation that at least some of them will get to the other end in reasonably strong signal levels, so they can properly demodulate the signal and get all of the digital data that's been sent.

Then Hare proceeded to describe the most commonly used method of mitigation of the resulting interference, called "notching."

To protect licensed users, what they usually do is to turn off the carriers in the spectrum they are trying to protect. So, for example, they didn't have carriers operating in any of the amateur bands, then in theory, if those signals were protected enough, they could operate without interfering with that particular part of the spectrum.

In our experience in a number of different BPL systems, BPL that starts off at the FCC limits, with a typical 30db of notching, has not done enough to fully protect that spectrum. In the notched spectrum, we can still hear BPL signals at levels that might be 10, 20, or more times stronger than other signals that are on the band. In the amateur radio service, for example, if we're trying to communicate with a station that is not extremely strong, those BPL signals would cover up many of the signals on the band.

Hare's description of the cause of the interference -- using the same frequencies for carriers to transmit BPL data that others are using -- and the apparently ineffectual job at undoing that interference using the notching technique, paints a far different picture of BPL interference than the one provided by the BPL lobby, or by the FCC, for that matter. I asked Hare about that disparity. He said, "The FCC has stated that the likelihood of interference from BPL is very low, or words to that effect. We've looked at their own test data, and the ARRL does not believe that their own test data supports that statement."

The raw data from those test results (available as a large PDF file on the ARRL site) -- as measured by the FCC itself -- clearly shows levels of harmful interference in the HF band generated by BPL pilot tests. When the FCC was asked to comment on the apparent discrepancy between its own tests and its Rule and Order, spokesperson Bruce Romano said, "Those issues are under reconsideration."

On the same day that I spoke with Ed Hare, the U.K.'s Office of Communications (OFCOM) telecommunications regulatory agency released the results of a recently completed study it did on a BPL pilot in Scotland. According to the ARRL's BPL news page, OFCOM:

... concluded that Amperion BPL equipment deployed in a field trial in Scotland "as tested is not and cannot be FCC Part 15 compliant above 30 MHz." Ofcom today released a study, "Amperion PLT Measurements in Crieff," which summarizes measurements it took at the site in Scotland. PLT is another term for BPL. Ofcom's investigation also demonstrated the limitations of Amperion's "notching" capabilities to mitigate interference to radio reception. ARRL CEO Dave Sumner, K1ZZ, says Ofcom's study reflects what the League and others have known all along about BPL.

To date, the only real success that BPL has achieved in mitigating interference has come in getting the FCC to relax its rules on the harmful interference it does generate. And now that relaxation of the rules is coming under close scrutiny. Michael Ross, a Representative from Arkansas, has introduced a resolution in the U.S. House of Representatives calling for a "full and complete analysis" of the radio interference created by Access BPL with an eye towards undoing last October's rule changes.

Conclusion

After having spent some considerable time researching this story, I'm left primarily with a sense of deja vu. BPL today is like the very worst of the dot com era: mythological, deliberately misstated, and majorly overhyped technology that is being used in ways it was never designed to be in the first place.

The FCC's role in the BPL soap opera has been less than stellar. I asked Dave Sumner, ARRL's CEO and Secretary, if the FCC stance on BPL seemed out of the ordinary, based on his dealings with them over the years. He replied:

Yes, it does. Historically the FCC has a reasonably good record of basing its decisions on sound technical analysis. However, Chairman Powell was cheerleading for BPL before the facts were in and continued to do so even after there was clear evidence that radio interference would be a major problem. Now that he has left the FCC we're hopeful that more sober leadership will recognize the need for reconsideration.

If you find it hard to believe that Michael Powell, the FCC, and the BPL lobby have been less than honest about the amount and severity of radio interference generated by BPL, all you have to do is to look and listen here: http://www.io.com/~nielw/BPL
or here: http://ve3hls.tripod.com/noise/utilities.html
or here: http://www.vk1od.net/bpl/QueanbeyanBplTrial.htm

In the interest of full disclosure, I am both a newly licensed amateur radio operator and a member of the ARRL.

On hamsexy.com (I think or was it batlounge?) there is a discussion and someone mentioned the whole BPL thing was put together so they can claim "competition" with DSL and cable. Other than that, it was never intended to be used. So they say on those forum boards.....

My Gripe Of The Month with all this is it seems the knowledge of physics is becoming lost and many people in the industry including LMR don't even know the specific frequencies they operate on.

Mike

I heard this whole chase go down from the beginning here in Terra
Linda and was really impressed that the San Rafael officer chasing
this guy was heard crystal clear on MERA all the way up to Santa Rosa.
I also heard Novato PD come on during the fiasco and say an officer
had been chasing the same guy\suspect earlier in the day but he had
got away. I do know San Rafael PD has a second "dispatch 2" talkgroup
on MERA but I'm unaware that they are able to "patch it" into Nextel.

Perhaps someone on the group knows the more of the inside scoop of
MERA can elaborate? This is all new to me.

The Sergeant (3X11) calling the chase for San Rafael is my good buddy Jim. Jim and I have been friends for fifteen years and were even in the same police academy class eight years ago. During the chase, he was riding in the passenger seat with an officer who is a great driver. He called me when it was over to tell me about it and I couldn't wait to hear the recording. Thanks a bunch Inigo for posting updates on the chase, recording and allowing the rest of us to hear it. I sent a copy of the chase to Jim, as he wanted to hear it too. Take care, Patrick

it means they switched to a nextel talkgroup on their nextel phones.

it's the equivalent of using a portable radio on a channel or talkgroup with multiple other users. i won't go into the 'performance' of nextel in push-to-talk mode, especially while driving.

there's no need to put the phone up to your ear like you're on a phone call. you can hold and use it just like a portable radio.

They will drop a "marker" which is basically a floating smoke marker in the area where the person jumped from since the currents are so strong by the gate. That makes is much easier for the Coast Guard to locate the body. I have seen them and they move very quickly in those intense currents by the Golden Gate.

39692. sf 2 alarm / arson?

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-05-20 18:40:16 UTC
From: nina zhito
Topic: 39692 Message: 39692

bcn advises that:

The San Francisco Fire Department reports that one person has been
detained for suspicious behavior following a two-alarm fire in the
South of
Market district this morning.
According to the department, the blaze was reported at 4:01 a.m.
at 66 Mint St, and the fire was declared under control by 4:52 a.m.
No injuries were reported, and the American Red Cross is finding
shelter for six people who were displaced.
The cause of the fire is under investigation, but arson may have
been a factor.

Hi Robert. I started to download the file from the link in this email. It was going at a fantastic rate of 2.8 KBP. It was going to take an hour and something so I canceled out. I had to leave at the time, last night, but just downloaded the file from your second email on this which only took maybe 1.5 minutes. Why was the first one so slow? Haven't listened to the file yet but thanks, looking forward to it! Jim

39706. Antenna Mast Tri-Pods/Antenna anchoring

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-05-21 03:11:51 UTC
From: John Gotti
Topic: 39706 Message: 39706

I'm currently moving and was looking into getting an antenna mast Tri-pod from Radio Shack for the new place. Anyone use them? are they sturdy? Not sure if thats the way to go. i want to anchor my 20 ft mast either on the roof or anchor it to the side of the house. Chimmeny is not an option as it is on the opposite side of the house from where I plan to set up my new monitoring station. Anyhow its a single story residence. any and all suggestions and ideas are welcome thanks...

From: vector@value.net
Topic: 39706 Message: 39707

the tripod is fine, but putting a 20 foot mast is about the limit for that thing without guying the mast. i'd avoid putting more than one antenna on it as well.

be sure you ground it as well.

I have a few of them, and have them anchored to 2 4x4s made out of Trex.
They barely move in the heavy weather we've had over the last few years.
What are you going to put on top of the 20' mast? I have a 10' mast
that has a 10' antenna on it (Diamond X6000A) and I think that's about
as high as I'd like to go up without guy wires ...

Subject: [bayscan] media encoder

Having trouble getting meida encoder to work correctly. It is bringing up my
router as the ip address 192.168.1.102 insted of the ip for the comcast. Any
thoughts on why? What to do? Ben? Trying to broadcast MERA.

>what is your true IP?? try www.firefeeds.com/ip to get your true IP address

I have that.

>The 192.168.1.102 is your internal lan ip address. If that is showing up
>in the bottom portion of your WME box then that is correct.. You need to
>insert your Gateway Ip address off your router's config into the media
>encoder html if you're going to be making a webpage out of it.

It doesnt seem like I can insert the true IP anywhere it seems that ME is generating it. Where do I change this setting.

>You will also need to open up a port on your router for the port to stream >the feed..
Most router's its called port forwarding on the router menu..
>lemme know if you need any help.. shouldn't take that long to troubleshoot..
>ben

Heres the router info.

Port forwarding can be used to set up public services on your network. When users from the Internet make certain requests on your router, they will be redirected to the specified IP.

[input] [input] [input]

Also... to make things really complicated I am trying this in two different places. Right now I'm at work trying this on a Windows ME machine, Using media encoder 7.1 and there are three routers staged together. Here the computer is generating http://KRIS'S:1554 as the url address... obviously inserting the computer "name" and not even the local ip address. Doh!

Thanks for the help so far

From: Mobile11@aol.com
Topic: 39725 Message: 39725

If interested the KFOG KAABBOOM is Tomorrow at Pier 32 in San Francisco. It's a all day music event. In the evening there will be a 30 minute or so Fireworks Event. There is expected to 350,000 people attending watching and so on. Along with the Coast Guard there will be local law enforcement helping to keep boaters away from the Fireworks Barge. During the show the Fireworks can accidentally shoot the wrong way or explode early and may hurt bystanders.

Some of the Local Law Enforcement showing up with their boats are : Alameda County Sheriff (ALCO 1) San Francisco Police (Marine 1,2) Richmond PD (PATROL 32) Contra Coast Sheriff, San Mateo County Sheriff, City of Alameda PD, Marin Sheriff (Mission City), GGNRA, and Coast Guard Auxiliary Vessels. The SFPD will have their Command Post set up for the event.

Not sure what Talk Group SFPD will be using but some of the Marine Radio freqs that will be used are :

Marine Channel 6
Marine Channel 21A, 22A, 23A, 81A, 83A and 143.280 (Auxiliary Mt.Diablo Repeater)

For those who want to see it but can't get there try the Pan Tilt Camera and aim it at the Bay Bridge.

http://www.nuspectra.com/vbcam/large.aspx
(http://www.nuspectra.com/vbcam/large.aspx)

And more info about the show:

Does anyone know what's going on at a North Beach park at Columbus and Mason
from 12:30 to 15:30? It involves politicians and so-forth. I don't think
it's connected with the KFOG event as it's over before that starts.

You might want to see if your firewall is blocking that port. Sometimes
your NAT tables/rules can be wrong, or Comcast may be blocking that port.

Regards,

Brad

Morning all!

For you fire buffs - here's a clear indication that summer is on the way. San Jose Fire extinguished a vegetation fire at McKee and 101 yesterday. No big deal, right? Well, not exactly. Battalion 1, 2 10 and 29 all responded due to the wind conditions and the way embers were blowing into an adjacent neighborhood. A little early season structure protection!

Here are a couple of shots (sans flames - traffic sucked and I got there late - as usual) from the incident:

Hey Bryan, your router hides your actual IP address purposly. Try logging into the router and go to "status" or something simlar to that (that's what it is on my linksys) and you will see your true IP address.

39750. A quick question Reguarding trunked frequencies

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-05-22 23:04:38 UTC
From: kdawg122786
Topic: 39750 Message: 39750

Hello all

I am writing to get something straight that no one can give me
a clear answer on. I live in Antioch. Can I receive any trunked
frequencies from my location. I have a pro 95. I have herd conflicting
answers to that question. Please set me straight. If I can what
counties would, they be. Alameda? Anything else?

Thanks a lot
Kyle

39751. Re: A quick question Reguarding trunked frequencies

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-05-22 23:07:51 UTC
From: inigo4688
Topic: 39750 Message: 39751

The only way you can tell for sure is by entering the control channels into your Pro-95 yourself and seeing which ones come in clear enough to trunk track the system. That's how we all figured out which trunking systems we could recieve, and that's why no one can give you a clear answer.

-Inigo

39752. Muir Beach Surf Rescue

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-05-22 23:19:33 UTC
From: inigo4688
Topic: 39752 Message: 39752

Marin County:

RP reported 2 subjects swept into the water south of the main beach near the rocks by a rougue wave, associated with an orange raft (much easier to see I'm sure). Muir Beach IC now reports he sees someone making their way across the rocks with an orange raft.

"Henry 1" (Sonoma County Sheriff Helicopter) enroute with an extended ETA from over Lake Mendocino.

"REACH 3" (Medical chopper) enroute from the Concord Airport (KCCR).

US Coast Guard Helicopter also enroute from CGAS San Francisco.

Responding Units:

Muir Beach Volunteers (E660 & friends)
E1585
Medic 33
Rescue 9

-and a few others I couldn't catch-

It seems everyone's now out of the water but Woodacre (Marin Co. Fire Dispatch) is continuing all units except Henry 1 who's needed back in Lake Co. It seems now everyone can cancel due to no medical aid required. Everyone's in good shape. Good news!

Associated Freqs:

37.10 MHz PL 136.5 - Marin County Fire (Control 4) - "Woodacre"

MERA Talkgroups:

24080 - Control H2 (Currently patched to Control 4)
24144 - Tactical H4
24176 - Command H5

16:17 Hours

An educated guess would be since the functions of the various talk groups are noted on radioreference.com, then the signals are in the clear. I'm assuming the "mode E" notation for the police TGs means they are encrypted.

I can't get Vacaville from Oakley with an outdoor antenna so that one is most likely out.
On my Pro-95 here in Oakley I can get Alco and Sac from my front room, that's about all.

I believe the original poster was using a Pro-95, so both MERA and Travis' trunking systems won't work for him because they're APCO25 digital.

> Has anyone confirmed whether Travis' system is encrypted or not?

As per radio reference I believe base security is encrypted. I finally got to listen to this system briefly while hanging out with some friends up on the hills adjacent to Mt. Tam, and it's quite busy; mostly with traffic from the guys loading the C-5s, and the mechanics working on the C-5s and KC-10s.

(They were actually a lot of fun to listen to:
Mechanic1: "Hey the APU on this C-5 is shot..."
Mechanic2: "SH*T!")

I didn't hear any of the classic R2D2 noises to indicate encryption on any talkgroups, but my scanner could have been filtering them out. I don't know. I was using a Pro-96.

I am wondering if all these medical calls are due to drifting
smoke,,,,,,,,,,,seems funny they would get so many all at once

Did you for sure hear a Vallejo Truck 2? I know they were wanting to staff a
2nd truck but didn't know if they had done it (my Mom and Dad lived in
Vallejo prior to passing away 10/13 years ago ...so I got interesting in the VFD.)

btw , our of interest...........American Canyon now has a Truck in their
station (11) don't know if its staffed or cross-staffed.

OK, I knew they had a 2nd truck, just didn't know if they got the money to staff it......maybe they do..........I know they got a Hosetender in Station 3 , recently saw it.....that baby comes from Chief Don Parkers days with Oakland Fire...since he was either a BC or Capt when the firestorm hit in 91 and they came in REAL handy.

Yeah,,,surround and drown.....bet its commercial, pretty close to the waterfront.

heh... not to be an ingrade or anything... but it's technically San Leandro. More specifically, the unincorporated area of San Leandro. I'm on 165th and E14th. Yes, ACSO is the primary responding agency out here, but all the mail to all the apartments around here say San Leandro on the addresses.

-g-

PS... anybody have the final _final_ list of talkgroups and their proper designations for ALCO fire? I still have an older list showing TG 17680 as Tac 3, not Tac 6. What's the latest and greatest?

yeah, I do remember seeing both trucks parked in station 1 , not sure where its stationed now as I am not up there very often.

I would have been surprized if they had the money to staff both of them. seems only San Jose is actually increasing the size of their dept, with maybe a few exceptions I can't think of ....oh, American Canyon as previously mentioned.....but no more.

Yeah, Engine 211 is the 2nd Engine out of American Canyon. One of their fire fighters lives next door to my brother, so I will find out for sure but I believe they have the following .....all at their only station (11) on James at Donaldson. they are building a ton of new homes on the other side of Highway 29 (Sonoma Blvd.) that is on the East side. I am sure that is where they are getting the money for new rigs and if they have hired any more FFs.

Engine 11
Engine 211
Engine 311 (believe type 3)
Rescue 11
Rescue 211
Watertender 11
Truck 11
Battalion 11

Obviously they do not staff all of them, I will ask to find out how many are staffed when I get a chance.

That's true; Benicia engines/stations were/are numbered in the 1X range, Vallejo in the 20's, Cordelia in the 30's etc. And Benicia had Engine 11 and engine 12 based out of the respective numbered stations. But several months ago it seems as if engine 12 was renumbered E-211. I don't know why; I think that it's the same apparatus. Benicia still has E-11 numbered as such. Anybody know why?

Benicia would have been one of the first called for Vallejo mutual aid.

I can believe that American Canyon also has an E-211. Two different counties.

? Got me. As why Benicia isn't going along with the program is anybody's guess.....Hayward is the same way, they switched to the Alameda County system and was in the 3600 range, but switched back to single digits..... I emailed them and asked why and was told that for mutual aid they would use the 3600 stuff..... seems like a pain in the butt to me to use 2 different numbering systems, but that's me?

The other Solano stuff I heard last night seemed to match the newer listings i.e. E47 from Suisun City, E71 and T74 from Vacaville, E35 and 36 from Fairfield, E31 from Cordelia.

REACH 3
REACH 1
CALSTAR 1

Are all out on seperate incidents right now. REACH 3 is landing at the Bolinas fire station in Marin County for a cardiac arrest patient, REACH 1 is enroute to Marinwood (near San Rafael), also Marin County, for a gunshot wound patient, LZ is the Miller Creek School w/ a 20 min ETA. I just heard CALSTAR 1 in the east bay talking to Fulton on their company freq too for an MVA somewhere, their ground contact is Quint 12 (if that helps... I know Walnut Creek has some Quints).

Associated Freqs:

156.075 - CALCORD
37.10 PL 136.5 - Control 4 (Marin County FD Dispatch)
46.20 PL 82.5 - Control 16 (San Rafael FD Dispatch)

MERA TG 24080 (Control 4), 26416 (Control 16)

868.3875 PL 71.9 - CALSTAR North

124.30 (AM) - Golden Gate Traffic (REACH 3 making traffic advisories, may also start talking to REACH 1 once he gets closer)

Also listen for the medics on the choppers talking to John Muir Medical Center with patient reports on - 155.28.

> CALSTAR 1

I also heard CALSTAR calling REACH 3 ON FACSFAC/BEAVER 124.125!

That's an odd one, to be sure.

I didn't hear a response, and I also didn't hear them make contact with
the FACSFAC controller.

Just a little more info:

REACH 3 & CALSTAR 1 are based out of the Concord/Buchanan Field airport (KCCR)

REACH 1 is based out of Sonoma County airport (KSTS)

On Golden Gate Traffic 124.3 they're using their N-number FAA callsigns. They are:

REACH 3 - N24RX
REACH 1 - N613AC
CALSTAR 1 - N623MB

Not to nitpick, but it's Felton - CDF Felton ECC who they're talking to to be precise. It's not technically a 'company' frequency, it's a statewide frequency that's shared among a number of different agencies.

> 868.3875 PL 71.9 - CALSTAR North

That's a new one for me. Did you mean 867.5375? That you would hear identified as "Vacca", i.e. "Felton, Calstar 1 on Vacca". This is shared with Loma, same frequency, different PL. Only other frequency I'm aware is used is one ID'd as ... Heck, I forget the name now, but there's only one or two flight nurses who know about it or use it.

Didn't mean to bitch at you Evan. I forget which peak the North Site uses, but I found the freq in this forum originally (it's been a lot more active recently, it depends where geographically the helicopter is - i.e. if they're north bay they'll use that one)and it was like Vollomer or Vacca or something. I didn't know Vacca was being used on the same freq as Loma too, I hadn't heard that. I also heard "CALSTAR South" was on Loma Prieta, on 867.5375 PL Tone 67.0. I'm probably a lot more likely to hear Mt. Vacca from my location in central Marin County, and the north freq comes in a lot clearer than the south one on Loma Prieta so that would substantiate my suspicion. We could probably find out if we dug way back in the list archives but I'm too tired right now lol.

There's Loma, Vacca and Vollmer. They're on (you guessed it) Loma Prieta, Mt. Vacca, and Mt. Vollmer. Vollmer (that was the name I was trying to remember) is rarely used. Loma and Vacca are more commonly used. As Loma and Vacca are the same frequency, you'll generally hear them call the site, i.e. "Calstar 1 Felton on Vacca". I haven't monitored Vollmer as generally not many flight nurses were aware of it, however it should be programmed in the radio in each helicopter (I have the master list somewhere). If they've been using it instead of Vacca lately, there may be a problem with the repeater on Vacca, or the link from Felton ECC to Vacca. (Keep in mind - Felton ECC is obviously in Felton - so they cannot hit the repeater on Mt. Vacca - there's a radio type link in Calstar 1's quarters so when Felton keys the radio in their dispatch, it transmits to the repeater via that link.

Not everything. Try Travis and BART's trunked systems. You should
be able to pick those up just fine.

Bill

Kind of a heads-up for low-level VFR over the bay. It's called "Golden Gate Traffic" and is mostly used by the news/traffic helicopters to keep each other appraised of where they are. CHP, other LE agencies, the medical helos, and to a certain extent USCG tend to play along. Sometimes it's a good way to hear breaking news; othertimes, not so much ;)

I don't know anything about it, but I just drove through there.
There was a schoolbus hooked up to a tow truck on the right-hand
shoulder, southbound lanes. I had heard on the radio that the
#2 lane was blocked, and the Northbound lanes were also moving
as slow as whale snot, so maybe something spilled over the K-walls,
but I refuse to rubberneck so I don't konw for sure.

When duty calls ...

Dispatchers at CHP's Vallejo office face waves of 9-1-1 calls - but not all are cries for help
By RACHEL RASKIN-ZRIHEN, Times-Herald staff writer
Vallejo Times Herald

Driving on a Bay Area freeway, you're suddenly stricken with a searing pain in your chest. You grab your cell phone and punch in 9-1-1.

Unfortunately, someone else dialed 9-1-1 on their cell phone just before you did, and they want the number of the nearest towing service. Or where the nearest pizza joint is.

So you wait in pain, all the while wondering if it will be the last time you wait for anything.

California Highway Patrol dispatchers say they're as frustrated with such emergency call delays as that person with the chest pains might experience. But, they complain, they're overloaded by calls, too many of which don't belong on their lines in the first place.

In the nine-county Bay Area, mobile phone 9-1-1 calls don't connect directly to a local police or fire department. Even if you live in Fremont, San Mateo or Pleasanton, calling 9-1-1 from a cell phone connects you to the California Highway Patrol's Golden Gate Division's office in Vallejo.

There, a handful of dispatchers field a huge volume of calls. And even if they're not of an emergency nature, dispatchers are instructed to handle them all, said Vallejo native Josie Hodson.

"We're everything to everyone," said Hodson, who retired from the CHP last month after 32 years. "It's chaos."

Hodson said CHP dispatchers not only deal with thousands of calls daily, they also must contend with personnel and equipment shortages. And they've had to combine officer radio coverage of large areas - with different allied agencies sharing assigned radio frequencies - endangering both officers and the public, she said.

"We're doubling radio frequencies," Hodson said. "San Francisco and Marin are doubled, and Napa and Contra Costa counties, and Solano and Sonoma counties are doubled. It clutters the frequencies. I've told officers to be extra cautious out there because they might not be heard."

The CHP also coordinates patrols of tow trucks along the area's freeways, getting disabled vehicles and other hazards off the roads, said CHP spokesman Wayne Ziese. Additionally, CHP dispatchers field non-emergency

"public calls" and those from allied agencies, all of which tie up dispatchers' lines while emergency calls stack up.

Freeway call box calls, which still come in despite the massive proliferation of cell phones, are contracted out, he said.

And the constant barrage of wireless 9-1-1 calls just adds to the mess, Hodson said.

"Our dispatchers are exhausted. The public is frustrated. They're swearing at us for being left on hold," Hodson said.

Ziese said that when cell phone technology became available about 20 years ago, the decision was made to route cell phone 9-1-1 calls to the CHP.

"No one envisioned we'd be getting 8 million calls to the CHP annually," he said.

The 9-1-1 system was implemented in 1970, said 13-year CHP veteran Diane Chupinski of Napa.

Hodson said CHP dispatchers never know what kind of call will drop into their line at any given moment.

"You never know what to expect," she said. "There are stabbings. Tons of domestic violence calls, which are very scary. The woman is usually screaming. There are break-ins and road rage, especially during the commute. And there are muggings, especially in San Francisco.

"It's just incredible. We have no idea what the next 9-1-1 call will be or what city it's going to be in."

What many people don't know is that when a cell phone 9-1-1 call is ringing in your ear, it may not be ringing at the CHP, said Chupinski, dispatch supervisor at CHP's Vallejo headquarters. It may actually be searching for an available satellite tower. You know you've connected to the CHP when you get either a dispatcher or a recording, she said.

When your cell phone 9-1-1 call gets through to CHP, the first thing you need to let the dispatcher know is where you are. Unlike 9-1-1 calls from land-line phones, which go directly to the local police or sheriff's department, the caller's location doesn't appear on a CHP dispatcher's computer screen.

Technology that narrows down a cell phone's location to within several hundred meters of the nearest tower is expected soon, Chupinski said. No one is certain when it might be widely available, though it was mandated in 2000, she said. Wireless firms have received extensions for implementing the latest technology as they claim they need time to allow their capabilities to catch up.

Meanwhile, wireless 9-1-1 callers need to tell dispatchers where they are so help can be summoned.

Unlike police and fire department dispatchers, CHP dispatchers don't dispense medical advice. They assess the problem and contact the appropriate allied agency, or transfer the call to that agency, depending on the circumstances.

"We've had women give birth on the side of the highway. We can't tell them how to breathe or push or anything. We send the ambulance," Chupinski said. That's why CHP dispatchers advise people to program local emergency and non-emergency numbers into their cell phones, or "use a land line for 9-1-1 if you can," she added.

Chupinski said local police departments can opt to have cell phone 9-1-1 calls routed directly to them, though very few have done so. San Francisco opted in two years ago, though any cell 9-1-1 call on or near a freeway or bridge in San Francisco still comes to CHP.

Chupinski said the growth of cell phone ownership outpaces dispatcher manpower to such an extent, San Francisco's move has made practically no difference to dispatchers' workload or stress level.

The situation is further complicated by the fact that thousands of non-emergency calls come into the CHP dispatch center monthly. Dealing with them ties up the lines, and there's no way of knowing if the call on hold is a more serious emergency than the call in the dispatcher's ear, Hodson said.

"We don't know what's on hold while we're dealing with junk calls," Hodson said. "It's why we have to work so fast, which causes stress injuries (to dispatchers)."

Hodson said one problem is what she calls the CHP's "crazy policy making us be Pac Bell or SBC, and give out 4-1-1 information. Police and sheriff's offices would never do that."

Hodson and other dispatchers complain they've been told to handle any call that comes in, emergency or not, and not to admonish callers if the call is not an appropriate use of 9-1-1.

"They told us it's not our job to educate the public," she said, adding that the CHP's own printed regulations seem to contradict this policy.

"The manual says 9-1-1 lines are reserved for emergency use only and that only emergency calls shall be taken on 9-1-1 lines, without exception," Hodson said.

CHP Golden Gate supervisor Susan Winters of Vacaville said that while there are too many nonemergency calls coming through the cell phone 9-1-1 lines, the dispatchers are exaggerating allegations that they're asked to do too much.

Winters said also that dispatchers are permitted to tell inappropriate callers that 9-1-1 is only for emergencies. However, interpreting what emergency means, isn't always clear, she said, and the "lecture" takes about as much time to dispense as transferring the call to the local police.

Winters, a 31-year CHP veteran, said dispatchers are complaining because they're unhappy with a soon-to-be-implemented return to a traditional work schedule.

"The dispatchers are disgruntled right now and are telling people that our policy is to turn them into telephone operators," Winters said. "The policy says we'll still handle nonemergency calls, but for clearly non-law enforcement-related calls, I can tell you to call 4-1-1 and disconnect."

Winters confirmed, though, that it's a thin, sometimes subjective line between an appropriate use of 9-1-1 and an inappropriate one.

"If someone calls for the Oakland Police Department's phone number, we have to get that for them, but some dispatchers were telling anyone who called for anything not involving the CHP to call information (4-1-1), and those people were told they can't do that," Winters said.

The CHP's recorded message for calls on hold used to include recruitment messages and a public service announcement about the proper use of 9-1-1, but complaints from the public prompted officials to drop the practice, Chupinski said.

"They thought the recording was delaying the call," she said, "but it wasn't."

Dispatcher Ellen McGrath of Vallejo said "it's a terrible, horrible problem. If you think of the person with the true emergency, they're waiting while I'm getting the number for someone who wants to order pizza while on the freeway in traffic. That's happened."

Orvis Wade of Suisun City, a CHP dispatcher for more than five years, said he's frustrated by the fact that an estimated 70 percent of wireless 9-1-1 calls should never have been made.

"I've had someone call for weather conditions in Tahoe and the next call was a father having a stroke, and they had to wait to get through," Wade said. "My favorite call was a woman who read me the riot act because she'd been on hold so long, when she'd been trying to report that someone had stolen her car cover in Pittsburg."

Funding for upgrading the wireless 9-1-1 system is another area of frustration.

Over the past decade, hundreds of millions of dollars have been collected from the Emergency Telephone Users surcharge, which applies a 0.65 percent tax on intrastate calls. That money was supposed to help upgrade the system, but, according to published reports, the state's elected officials have raided the account numerous times, diverting millions into the state's general fund. Hodson said she and others are insulted by that and by the lack of indignation by public safety officials.

"Where is the outrage?" Hodson demanded, asking why more isn't being done to get the funds back into the CHP communications centers.

"The dispatchers at the Golden Gate Division struggle to find batteries for the boxes that we plug into to trigger the system that makes the 9-1-1 computer function! The boxes themselves are often broken and we piece them together. Headsets are at a premium, and easily fall off our heads as they wear. Yet millions of 9-1-1 funds are directed to the black hole somewhere?" Hodson asked.

But when dispatchers say when they get a real emergency call and are able to help, it can make the job worth doing.

"I remember one call, when a woman from L.A. was visiting a friend in Lake Berryessa, and she called thinking he was having a heart attack," dispatcher McGrath recalled.

"She and her brother had put him in the car and were trying to take him to the nearest hospital, but they didn't know where that was. We tried directing her and at the same time arranged for a helicopter to meet them along the way and they took him to the hospital and saved him. That felt good."

- E-mail Rachel Raskin-Zrihen at RachelZ@... or call 553-6824.

Nonemergency calls

Too many wireless customers don't understand that misuse of 9-1-1 ties up dispatcher lines for real emergencies, CHP officials say.

Callers may ask why traffic is tied up or for directions to Pac Bell Park, and some make intentional crank calls, adding to an already overloaded system. Dispatchers also have to deal with babies and toddlers calling 9-1-1 accidentally while playing with cell phones.

The following are actual calls fielded by CHP Golden Gate Division dispatchers in recent months:

- A woman called complaining an employee at a window business wouldn't let her speak to a manager.

- A man called concerned that his 68-year-old sister was supposed to return from Reno and never made it. She'd been missing 3 1 2 weeks.

- A caller dialed 9-1-1 to complain about being shortchanged at a gas station.

- A woman called because her young children were fighting.

- A caller dialed 9-1-1 to complain that the dry cleaner messed up his clothes.

- A motorist called to report a van with a bumper sticker reading, "The only dope worth shooting is Bush." The caller regarded this as a direct threat against the president, and wanted the offending party arrested.

- A lady called to say she wanted to volunteer at the fire department.

- Someone called to say deli workers took too long to make a sandwich and wouldn't give a refund.

- A juvenile called complaining that his father wouldn't take him for fast food. He was hungry but didn't want what mom was fixing at home.

- A caller wanted to know if the CHP knew who knocked on her door the previous night.

We're way past time. The FCC put in a mandate that cellular carriers be e-911 compliant years ago, but each year the deadline came, the carriers couldn't meet the goal, and the deadline was extended. And then again, they couldn't meet the goal, and the deadline was again extended. The problem is it's a whole mess of problems. The cell site needs to know who to transfer the call to - and then if there's a cell site that may cover say 4 cities, who gets the call? Right now in Sunnyvale if I call 911 from my Verizon phone, I get Sunnyvale PD. I have most PD's PSAP numbers programmed into my phone for the areas I travel, so it's not an issue. But it would be nice to call 911 and get the local PSAP wherever I am, but there's way too many variables. If I'm on the freeway, and I'm closer to a cell site for say Sunnyvale PD, do I get Sunnyvale PD? Or if I'm in Sunnyvale, and I'm close to a freeway cell site, do I get CHP?

And on another note.. WNP (Wireless Number Portability) came out
November 24th, 2003 - this gave people the ability to change their
number from say Cingular to Verizon. Prior to this date, people were
held hostage by their carrier if they had their cell phone number
printed on a business card. Because if you left Cingular, you lost your number.

Now, starting (IIRC) late 2001, carriers were allowed to charge a WNP
fee - a fee for the ability to change carriers and keep their
numbers. However they couldn't yet change carriers. The FCC also
allowed the carriers to charge a E-911 fee - a fee for the costs
incurred in upgrading their system. These are fees the FCC allows the
carrier to charge. And there's other fees carriers are allowed to
charge that are listed under "Taxes/Misc" that aren't government
imposed, just simply charges the carrier charges the customer.

But that's another rant I could go on for days on,...

Well sure! Past time, in fact. But HOW?

Mind you, as long as this has been a problem, we should by now each already have programmed local responder numbers into our cellphones.

Enhanced 911 rules require service providers be able to locate 911 callers within oh, about half a mile. This has turned out to be harder to do and more expensive than first thought. The E911 compliance date has been extended, and one recent petition asks the FCC to relax the acuracy requirements for those rural providers who can't triangulate on a caller when he's only being picked up on sites serving miles of road or a single mountaintop site 20 miles away.serving a whole valley.

Is that what I just heard on SCU?

I work in Pleasanton in the 3rd floor, which you'd think would be great, but the RF God's don't like this building - too much metal in the windows and computers. Can BARELY pick up SCU. Thought I heard something, but couldn't make out what.Hmm.. My own personal extender from my car to my HT... Hmmmm.. :)

I hear 153.890 Sac City All the time in the North Bay. Powers over San Mateo County Control 1. I hear it also in San Francisco so bad that I just locked it out. Miss SMCO Control 1 though.

You know , now that you mention it Paul.....when I lived in the city I could hear it too.....of course thats a long time ago and 153.89 at the time was just Redwood City fire only so I couldn't care less.

Now If I could only get my old apt up on twin peaks .....with a Yagi I bet I could get Sac TRS .

Evan:

Up there in pleasanton, you'll probably only hear dispatches on Tone 1. Here in Campell, I can hear tones 1, 4, and 5 But anything in the Central Valley i have to rely upon Firescan.net or Ben's feeds to hear dispatches and radio traffic there.

It could be the location, but it's also this building. I'm less than a half mile off 680 & Stoneridge, opposite direction from the mall. Sitting in the parking lot, I can hear mall cops on my HT. Inside the building, 3rd floor - nada. Not that I WANT to hear mall cops, but you get the idea. :)

And metal windows. :)

Actually kinda funny story.. Brought my HT in one day, and started scanning VHF. Nothing. One of my coworkers, also a ham, then told me this place was a RF black hole. I almost gave up, but let it scan the UHF band. It stopped on a UHF frequency of a tow operation. And the first voice (aside from the dispatcher) is a buddy of myne who's a tow driver - wasnt' aware he was working down in this neighborhood.

Kinda funny. That's about all I've picked up in here though.

39880. mobile extenders (was Re: CDF Dispatch...)

yeah, i used to do it all the time with my dual-band mobile cross-banding onto a VHF itinerant (this was the early 90's before i even had a ham license... i know, shame on me). then it hit me (literally) that rebroadcasting had some legal issues attached to it.

won't be doing that again.

Is it the frequency being rebroadcast on that makes the legal issue a
issue? I mean heck, we rebroadcast audio on shoutcast/teamspeak /etc...

Speaking of Sacramento, does anyone know the frequencies they will be using for the Sacramento Jazz Jubilee coming up this weekend? They seem to use a lot of 461--465 stuff but I don't have any specifics at this time and would like to listen. Thanks for any info.

i believe on both questions, the answer is that RF radiated into free air for anyone to intercept is subject to regulation by the FCC. i don't agree with it, but i believe that's the spirit of the regulations. either there is no law / regulation specifically regarding it's rebroadcast over the internet or there hasn't been enough of a formal complaint about it yet to warrant one being made. personally, i think rebroadcasting it over the internet shouldn't be a big deal at all. what's somebody listening most likely over a 1000 miles away or at least of a distance to not take advantage of the information going to actually try to do?

so in more simple terms (because i think i just confused myself), you need to be licensed for the frequency you're broadcasting on, you can't be broadcasting offensive material, and you can't be rebroadcasting a public safety or other signal without express permission, licensing and due authority to do so.

Until that time I dial "0", get my cell carrier operator, ask
for "City xyz emergency" and they connect me (I believe they have to
do this). MUCH faster than going through the CHP and avoids having
to have direct emergency numbers for all cities. (BTW, they won't
connect you to non-emergency police/fire/medical numbers.)

I've sorted my phone book with PD - <City> so, I hit one key for phonebook, then PD (well, 73), then scroll to the city I want. Much more reliable than 0, waiting on a cellular operator to spell "Pleasanton", etc. I've more or less given up on calling CHP for freeway incidents unless it's something big. It often takes way too long to get a hold of someone, and the few times I've heard my BOL put out.... well, let's just say they should be charged with murdering my report. :) They DID put it out quickly, just incorrect and incomplete.
(Refresher for those that are keeping score or care <grin> it was a white ford explorer, full size amber light bar, partial plate with the last 3 of <something>. It came out as a "White Ford Explorer, no plate information."

Lacking the last 3 of the plate AND the light bar information, I'd disregard the BOL if I were an officer. However with that partial plate AND the fact that the truck had a light bar, that's more or less enough to go on.

I'd be willing to stream Oakland as soon as my 2nd broadband line is installed
in about a week.

Does it work with DHCP and not a static IP address ?

Fire and PD, or just fire ??

I need an excuse for 1 more 800mhz yagi to annoy the neighbors.

Do you remember more of the conversation to help put "friendly" in context?

Generally the undercover cop is the UC (as in YOU SEE). Friendly is used
in military speak to mean "one of ours" or something to that effect.

39897. RE: [bayscan] lingo?

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-05-25 06:38:38 UTC
From: Matthew Kaufman
Topic: 39890 Message: 39897

Imagine for a moment you want to bust a drug dealer and record the evidence of the transaction.

You've got a couple options:
1) Put a body wire transmitter on an undercover officer and have him make the purchase
2) Put a body wire transmitter on someone who you've caught but "turned" to your side (typically by offering reduced prosecution in trade for the assistance) in order to "work your way up" to someone higher in the organization.

In case #1, a "UC" wears the "wire"
In case #2, a "friendly" wears the "wire"

Obviously this can happen in other cases... Perhaps you tail a "friendly" while someone else is in the car giving him directions to see where a supplier is. Perhaps you are doing surveillance on someone else and you see a "friendly" from another case show up. Who knows?

My knowledge doesn't come from being on either side of this, just as a long-time listener to particular channels.

The CI is the snitch and the UC is our guy. However I've heard the person being watched often referred to as "our friend." That is, when they are playing that 3 car tailing game, the cop in the lead car might say "I've got the eye on our friend" or "our friend is in lane two." So now that I think about it, "friend" usually refers to the alleged bad guy.

So now I wonder if "I've got a friendly in lane two" was perhaps "I've got our friend in lane two."

I'm sure it varies from department to department, because I've heard it both ways, now that I think about it. The "friendly" can vary from "the bad guy we're watching" to "the snitch we're watching" to, occasionally, "the 3rd party who isn't a snitch but who's cooperating with the investigation" I'm sure, depending on context and local practice. Some places use the "CI" term on the air a lot, some don't.

As the first person to reply on the thread inquired, it is all about context. Without more in this case, we'll probably never know for sure.

OK...

I get the "true ip" thing. The address for media encoder will be http:// my ip address:8080 or whatever port I set up.

The router part is still what's confusing me. There is port forwarding and port triggering. Am i setting up forwarding or triggering?

For forwarding I need service port range_____ and _____, protocol (tcp,udp or both), and ip address for my server (192.168.1._____)

For triggering I need application_____ Trigger Port Range _____ and _____ , incomming port range _____ and _____

Thanks again for all the help guys I hope others can benefit from your efforts/information too.

Around 8:45 I saw a pair of REACH helos fly over the East Bay headed toward San Francisco. One of them just came back, headed toward Concord? USCG 6591 is about to touch down at SFO and 6505 has been there for a while.

6591 was just tasked with checking out an "oil sheen" at 37-45-54N
122-38-44W which is about 10 miles WSW of the Golden Gate Bridge. It's
totally foggy on the bridge right now, so I doubt I'll get a visual.

Although I can't help you on which one you need, perhaps I can provide some insight by explaining the difference:

You are on NAT - basically you don't have a public IP address, you have an internal private IP, probably 192.168.X.X. So do I - everyone can have the same private IP. But you have a public IP. So when traffic comes to your WAN (public) IP, your router needs to know what to do with it.

Port forwarding: Say you forward port 123 through 125. This means that any traffic on ports 123-125 will be forwarded back and forth to the computer you specify. This is the most common.

Port triggering: This means if your trigger port is say 123, and ports are 140-150, this means if a incoming packet of data is sent to port 123, your firewall will open port 140-150.

You'll probably want port forwarding, but I unfortunately can't help you on what ports. I personally have my computer on a DMZ with a software firewall - this means anything goes to my computer, the software firewall then handles it. The advantage of a software firewall (I use Sygate) is you have control by program.

And you'd be amazed at how many programs you run try to 'call home' - i.e. connect to their server and send information. A software firewall quickly puts an end to this invasion of privacy.

6591 telling SanFranAir on 345.0 that they were unable to locate the sheen due to fog, but they've told Group about it.

The shadow of 6591 is featured in this News Release:

Nearly everything the USCG does that's 'operational' these days is encrypted. Now that they are officially part of DHS, that part went quickly. On the 1st of this year, the USCG changed their primary air frequencies to get out of the 380MHz->400MHz band that is being deployed for a set of new Military LTR systems [Has anyone here caught any action on that band in the SF area?]. The new line up is:

345.0 OPS [this is where you'll mostly hear SanFranAir]
237.9 OPS #2 [never heard traffic here except for testing on 12/31]
326.15 Air-2-Ground PRIMARY
379.05 Air-2-Ground #2

I love CSI. One of my favorite shows. One thing I liked more early on in first and second season is how they'd bring in a couple who just lost their baby, and work up a whole story about how the mother murdered the baby and then the father buried the baby, and then the young sister cleaned up the scene, and then the dog did the laundry, and.. you get the idea. Meanwhile, the mother and father are in tears being accused of such a crime. Then they find a hair fiber which then proves it was actually the maid who did the whole crime. "Oops, sorry! Our bad!"

I also love the episode where there's a hit and run outside. They start to photograph the scene. It starts raining. Grissom starts yelling "Hurry up! collect everything you can! Document everything! We have 30 seconds before our crime scene washes away!"

This is good to know that if a person ever wants to commit a crime, just do it in the rain.

Cops must have a tough job in Seattle. <grin>

They talk on the UHF freqs but when local they use 21A - 157.050

When in Humbolt Bay area their primary is 83A - 157.175

and in Monterey Bay Area they talk on 23A - 157.150

Check the bottom of my freq page (needs some more work but it gets the message accross)

Yes, in the mil air band. Since I just moved, I dont have them handy but I
think one of them is either 284 or 384 Mhz.
that is all i think i remember.

Date: 2005-05-26 19:06:08 UTC
From: Jim Cooke
Topic: 39942 Message: 39943

Correction - Robbery was at USBank, not Bank of the West. Appears two BMA's were involved in the robbery and were driving a faded green or brown late 80's Buick Regal, no hubcaps, with a cracked passenger side windshield, "possibly lowered". Rohnert Park has been very slow about setting up their perimiter so I would guess these guys are long gone.

39944. Re: Bank Robbery-Rohnert Park-1300 Update

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-05-26 20:03:22 UTC
From: Jim Cooke
Topic: 39942 Message: 39944

As of 1300, Rohnert Park has basically thrown in the towel and returned to normal traffic. Apparently, bank robbery isn't consider much a big deal up here any longer. They did give out three tickets for no seat belts after the holdup so the public safety is still being looked after in Rohnert Park. :)

Regards, Jim

39945. [bayscan] Fire Aparatus Numbering... (Was Re: Huge Fire Vallejo)

OUCH.....hate to tell you this Paul, But it varies from agency to agency. If your not on yahoo group norcalfire.....I would suggest it as Jake has a great site including Fire Season 2005 which explains how CDF numbers their units? However its different from this county and this city and so forth.

Alameda County (and some others) number their Chiefs 01-20 followed by inspector/investigators 21-40. Then Engines 41-70, Trucks are 71-79. Type 3 Engines (Wildland) are in the 80s. Special stuff like Hazmat, Rescues in the 90s.....But again, even sometimes within the county it may vary a little.....

Santa Cruz County is different.....for instance 3112 is an Engine company out of city of Santa Cruz. In Alameda County a unit ending with 12 is a Battalion Chief.

What agencies are you MOST interested in and I am sure enough of us on this list can help you out.

this article was already posted on this subject and it had lengthy on-going thread from Bayscanners. Anyway, this article has a photo of dispatchers at the CHP's Golden Gate Division headquarters.

http://timesheraldonline.com/ci_2750974

abstract:
"The California Highway Patrol's Golden Gate Communications Center in Vallejo is staffed by exhausted dispatchers overwhelmed by 8 million calls annually, many originating from cellphones and 70% deemed unnecessary and/or non-emergency. Dispatchers are upset with what they say is management pressure to accommodate all calls, regardless of their nature, and not to admonish callers about inappropriate use of the emergency number." (Vallejo Times Herald)

Well, now that I think about it more, and since it is what got us started on this discussion in the first place, I do have another question. What specifically then, is the 3XXX numbering for Solano county that Kelty lists and that Ed originally referred to? (Kelty Golden Gate 2004 pp98). Who assigned them And what good are they if the various agencies don't use it?

Seems to me that a unique statewide designation scheme would be a good thing. Hey, but what do I know... I'm just a software engineer who enjoys monitoring as a hobby. :-)

Hey where's Linda?! ;)

I remember sitting in on dispatch once - can't recall the city... and
it was the day there was a somewhat decent quake. The dispatchers
look at me and they're like "Here it comes..."

and sure enough:
"911 Emergency?"
"Did we just have an earthquake?"
or
"My power just went out. Is that because of the earthquake?"
You can get the picture of the rest of the calls...

All of these suggestions are good. May I suggest that since police work is still a testerone-driven profession... perhaps it was merely a way for the officer speaking to call someone (*ahem*) in lane 2 to the other officer's attention.
At least, that's the sort of thing I've heard (and was instructed to use during my BRIEF time as an explorer 15 years ago). I figure they teach the important things first, right?
Then I decided things were more fun on the red rather than blue side of the lightbar.

I doubt you will find anyone who wouldn't like a statewide system, but its probably politics.....the same reason Hayward (and others) do not go along with the county system.

I noticed a few weeks ago Vallejo was using the 2 digit numbers for their rigs i.e Engine 25 Truck 21 . But when monitoring Solano County during the 3rd alarm in Vallejo , the mutual aid units were using 2 digits as well i.e Vacaville Engine 71 Truck 74 . They seem to be going by station numbers as opposed to the four digit numbers. I am not up on the systems in the area as someone else who lives in the area probably is (help out here someone)

BTW , the " politics" isn't just for Fire.... Daly City Police never did really get with the San Mateo system for their units however they at least do seem to when they do a pursuit or for mutual aid reasons.

I believe that's the CDF numbering. The statewide numbering would be great, but imagine how many engines some departments have - I mean you'd have to have a 7 digit ID number for a engine!

Of course then do trucks have their own numbering seperate from engines? What about "Squads"? And one squad may be a utility for another agency.

Once I get my home DSL back up and running, I'll maybe create a page where we can track engine numbers for agencies. I'll have to see the easiest way to get it set up - i.e. least amount of work for everyone.

There will always be exceptions and we all simply must understand that

The Engine numbering I listed for ALCO for instance can cover all units in the county including the largest dept. (Oakland) as no one has more than 30 Engines (I believe OFD has 23)

But, it would not work for SFFD or SJFD, SF has 42 and SJFD has 31 and San Jose will be added more Engines in the next few years.

(plus their airport units will throw you if you first hear them as they are Engine 20A Engine20B Engine20C and Engine 20D)

And then there is LAFD and LA County Fire.......LOL......

the first 2 digits designate the Fire agency, the third digit designates
what type of equip. it is. the last in most cases is the station #.
Before someone posts anything different, (like I said in most cases its
the station #)

0-39
40-49
chief Officers, training officers, ems officers, misc support people.
ie. mechanics, 40 hour capt's
Engines
50-59 Reserve Engines or Engines w/ dept. with more than 10 sta's
60-69 Reserve trucks or dept. w/ Engines with more than 20 sta's
70-79 Ladder trucks
80-89 type 4's
90-99 Specialized. Equipment ie. haz mat, air support, Boats etc.

Hey not picking on you and this is probably a bad example, but could we all try and keep the subjects as short as possible? Most e-mail programs truncate the subject when indexed (i.e. unless the message is opened) somewhere like 40 characters, so once we add RE: and [bayscan], for example, that cuts down the remaining characters. This thread for example now shows in my inbox as "Subject: Re: [bayscan] Fire Aparatus Numbering... This is what the #'s m" ..

This isn't a huge issue with this thread but for example, an older post I can't find right now was something like Pleasanton: Working Incident <location> and of course it trims off the location.

I'm using Eudora, wondering if others see this in other e-mail programs? AFAIK, it's not a setting I can change in Eudora.

39961. Win96 tables for MERA and San Mateo County trunked systems

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-05-27 00:03:23 UTC
From: Gordon Arnold
Topic: 39961 Message: 39961

Hi everybody,
I've tried my darnedest to find the answer in the manual or on radioreference so as to not bother y'all, but I have struck out. Would somebody please tell me the correct table information for these UHF trunked systems? Radioreference.com <http://Radioreference.com> gives me the following Custom Frequency Table information: 1; Base: 482.0000; Spacing 12.5; Offset:380 and 2; Base: 488.0000; Spacing: 12.5; Offset: 560. Win96 asks for CH Lo and CH Hi data as well. Using the defaults of 380 and 759 is receiving only some of the system. I believe I understand why, what I don't know is the correct info for these fields.
On another Pro-2096 note; the manual says I only have to load the control channels (which I did for San Francisco), however, I am not hearing everything on the system with the banks set to "Open" mode.. So I'm trying again, loading all of the channels into the scanner to see if this works.
TIA,
Gordon

From The May/June Fire Apparatus Journal

SFFD is ordering 10 New Engines from American La France (one change is moving the hard suctions [used for drafting) to an interior area to allow more compartments.

Alameda County is ordering 3 Pierce Quantum Engines, all 1500 GPM, 500 gal Water and 20 gal foam tanks. One to Engine 3448 , one to Engine 3456, unknown for the 3rd rig.

Newark also ordering one Pierce Quantum Engine

Hayward has ordered a 2004 Seagrave Engine with a 2000gpm pump and a 750 tank.......for Engine 8

39968. Re: Win96 tables for MERA and San Mateo County TRS

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-05-27 00:57:35 UTC
From: inigo4688
Topic: 39961 Message: 39968

MERA:

CH Low: CH High: Base: Offset: Step:
---
380 569 482.00 380 12.5
570 759 488.00 570 12.5

San Mateo:

CH Low: CH High: Base: Offset: Step:
---
380 559 482.00 380 12.5
560 759 488.00 560 12.5

San Mateo is just slightly different, with the second CH Low being 560, meaning the 1st channel high is 559, and it still goes to 2nd channel high at 759. I found that out searching radioreference.com forum threads because initially I didn't understand that channel feature on Win96 either.

39969. CHP Extender question

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-05-27 01:02:05 UTC
From: Evan Platt
Topic: 39969 Message: 39969

Hey all.. have a question on the 'technology' behind the extenders used by CHP? I may be wrong on some cases, so please correct me where I'm incorrect.

So if I understand... Each 'channel' in a CHP mobile radio scans both the mobile and the base, correct? So if a officer selects Ruby, the radio is scanning between base & mobile, so he'll hear base & mobile traffic?

A officer initiates the extender by putting the car in park? He'll then hear both the base and the mobile? Then what happens when another officer comes up to the scene? How does the second extender tell the first extender that its taking over? I monitor the extender frequency, and occasionally hear the <BEEP> that I'm guessing is the extender acitvating? Is there a chunk of data in there hidden?

So how then do the cars 'communicate' and determine which car should become the new extender? Say one car goes to a call. He's the extender. Another car arrives. Does he automatically become the extender? If then a 3rd car comes, is that car then the extender? Now let's say we're up to 8 cars - when car 8 leaves, is car 7 now the extender? How is this determined?

I'm guessing there's more to it than this - but I can imagine a problem if a officer makes a stop then say just out of range another officer makes a stop - and then his car becomes the extender - then say he leaves, but he's on such a fringe area, the other car doesn't get the signal that this car is leaving - I'm hoping there's not an officer now stuck without an extender when he's 2 feet away from his car?

Ramble... :)

Thanks.

Evan

There's a neat page on CHP radio history....

http://www.mbay.net/~wb6nvh/chpradio.htm

Been around for several years, and explains the basics about the extenders.

> So if I understand... Each 'channel' in a CHP mobile radio scans both
> the mobile and the base, correct? So if a officer selects Ruby, the
> radio is scanning between base & mobile, so he'll hear base & mobile
> traffic?

That's how I understand they operate... not sure if the settings are
different or if scan is typically turned off for areas that are repeating
mobile traffic onto the base frequency. And yes, you will hear mobile
traffic over the extender frequencies when one is active (and of course,
nearby).

> A officer initiates the extender by putting the car in park? He'll
> then hear both the base and the mobile? Then what happens when
> another officer comes up to the scene? How does the second extender
> tell the first extender that its taking over? I monitor the extender
> frequency, and occasionally hear the <BEEP> that I'm guessing is the
> extender acitvating? Is there a chunk of data in there hidden?

Activation I believe is still done manually, but this I'm not sure of. I
do know that the mobile will beep incessantly at the officer until he
turns it off. Reminder to deactivate the extender so those 'cop detector'
type scanners aren't getting a bead on it, or at least that is what I've
had explained to me over the years by officers and others.

No data hidden in the beep of the extender activating, but the beep does
perform a function. The other extenders listen for that beep, and when
heard they will 'bump' themselves up a wait-state. It keeps multiple
units on the same scene from interfering with one-another. The newly
arriving mobile becomes the new extender for the scene, and the others are
now no longer active.

> So how then do the cars 'communicate' and determine which car should
> become the new extender? Say one car goes to a call. He's the
> extender. Another car arrives. Does he automatically become the
> extender? If then a 3rd car comes, is that car then the extender? Now
> let's say we're up to 8 cars - when car 8 leaves, is car 7 now the
> extender? How is this determined?

Yep, as explained above, they should keep bumping one another up. The
units do malfunction though, and I have drove past scenes where more than
one extender is in operation and they're interfering with one another. I

don't know what happens when one car leaves, but the wait states basically make it so the other extenders literally wait an interval of time before determining that there are no other extenders operating. Supposedly the next lowest (or in-line) wait state extender will become active. There was supposed to have been a reset button on the extender, to put the wait-state back to zero, but I'm not sure if this is how things are done or not.

> I'm guessing there's more to it than this - but I can imagine a
> problem if a officer makes a stop then say just out of range another
> officer makes a stop - and then his car becomes the extender - then
> say he leaves, but he's on such a fringe area, the other car doesn't
> get the signal that this car is leaving - I'm hoping there's not an
> officer now stuck without an extender when he's 2 feet away from his car?

The extenders themselves are purposefully 'deaf' on the receive side. Supposedly they're a little out of alignment so they aren't receiving a handheld too far away (or anther extender). I've heard officers fade-out on their extenders quickly during a foot-pursuit. I've heard others get well past a dozen blocks before the extender couldn't hear them. Guess it just depends on who puts the unit on the bench to do the alignment.

Hope that was somewhat helpful, wish I knew more.

It was from Fire apparatus journal Magazine.....there on-line too, but the article isn't.....in case your interested in subscribing.

I have been subscribing for about 3-4 years. I submitted some information on new equipment once only to get a semi-nasty reply by one of the guys (I'll leave his name off here) that HE Writes the articles for FAJ .....<sign> thought I was doing them a favor since (1) the SF bay area column is usually the shortest of the several areas the magazine covers (New York's' article is always the largest) AND (2) on at least 3 times there was NO article for our area

I have since emailed the "other " guy who does SF and he seems like a decent guy and thanked me for the information. In fact I just emailed him regarding SJFD Air 6 and the fact SJFD is getting more new equipment in the near future.

The magazine is bimonthly and is $27.00 @ year

Yep Nina.....Petalumas Engine is on Sutphens' webpage , 8th one down.....but no pic of the ladder tower ;-([See Below}
Checked Seagrave and E-Ones.....nothing

But Pierce (www.piercemfg.com) has some pics of rigs from ALCO and Rohnert Park.....not sure when they were delivered.....AND I just found the Petaluma has a 105' Quint from Pierce.....not Sutphen , and Pierce does have a pic of it :-) Funny thing is I have seen this pic before.....just couldn't remember it (of course , at my age I can't remember a LOT of things LOL)

Alco has their engines and are being oufitted as we speak.. Probably 1-2
months before they go in service... the engines will indeed be going to
sta 8, 16 and most likely 3, while 3 will rotate to 11...

Yeah, good point George..... and your right on about drafting, I remember working a 5th alarm at Pier 7 in the city and we had a few Engines drafting .....we supplied WaterTower # 1 with EIGHT big lines.....that thing could really throw a heck of a stream of water.....considering it was built in 1903 :-)

They wouldn't need to get 2k GPM out of a pipe.. I don't think
there's any instance where one rig would put 2k GPM of water on a
fire. I know I ain't the biggest of guys but I don't know of many
firefighters that could handle a 1000gpm hoseline, much less 2000gpm.
Well Ok, between a few hoselines, an aerial, etc - I still can't see
them using full volume. :)

Did you hear any more about this? I wonder if the FAA was really enroute or wanted to speak to him by phone? In all the plane incidents I've worked, I've never seen an FAA mobile unit. I've seen NTSB but all the contact I've ever had with the FAA has been by phone in Oakland.

Although 2000 GPM is a lot of water, it's a very small amount when you consider how much water flows in even a small river. 2000 GPM is equal to about 4.5 cubic feet per second of flow. The Russian River is flowing at about 1800 CFS now and flows at about 60 CFS even when it is really low in the summer. It gives you some idea why it takes so many engines and hose lines to put out a big fire.

This may be the source of the Bigfoot CAP traffic around the same time this
evening.

Bigfoot = NORAD
CAP= combat air patrol

CAP was up chasing something about the same time.

Could this be the Guy in the Cessna that buzzed the Santa Cruz wharf at
<100ft. earlier
this evening ?

come on Jim ,,,,,,,,,,,,,,,comparing an Engines GPM with the Russian River ??
kind of unfair LOL

when you compare the Engines of today with the ones I remember when I first
got an interest in the Fire Service, its quite an improvement. the highest in
SF was 1000gpm and some of the older rigs were 750 and had NO tanks (called
duals) [late 50s and early 60s]

As far as how many Engines it takes to put out a large fire, that has
certainly been reduced for number of reasons.

1) The increase in capacity of the Engines and their supply i.e. LDH (large
Diameter Hose) like 5" supply line. Many of the new Engines have as many as 6
outlets.....if you feed the 1st due Engine plenty of water, they can
supply 3-4 large lines.

I remember fires in the 60s where the streets were full of
"spaghetti" what the media referred to with lots of hose lines from various Engines
and hydrants.....Don't seem to see that as much as in years past. Of
course there are exceptions i.e. the Santana Row Fire in San Jose in 2002.

Yes, it is, but my point was that, even when it looks like huge volume of water is being thown on a fire, it's really a very small amount compared to what most people think of as a large amount of water. It would take almost seven minutes for water at 2000 GPM to equal the flow passing any one point for one second on the Russian River right now. Just gives some perspective to people who wonder why a fire can't be put out faster.

No, what would REALLY give them good PICS would be fighting fire like they do in Buffalo with icesickles (spelling ;-( ) hanging from the rigs, ladders,hose , helmets etc.

then again,,,,,,,,,,,Buffalo can KEEP that kind of weather LOL

Ahem..

Oh yeah - the fires only happen when I'm at work. Never mind. :)

You're probably right Jim, they probably wanted the Sheriff to make him call the FSDO in Oakland. I never got much of an update other than that the unit found the plane and was looking for the pilot, code 4.

NO! Someone actually buzzed the Santa Cruz Warf at 100 ft? I figured the pilot was some dumb weekend warrior but that just took my assumption to a whole new level! I DID hear the activity this evening on Bigfoot WADS (Western Area Defense System) Blue 7 - 364.20. Because I could hear ATC but couldn't hear the pilot (and missed their callsign), I figured it might have been un-related or far away (like the Fresno ANG F-16s), but I AM in a valley. I wish I tuned in a little earlier. :)

For information, the FAA will be after that guy not only for being an idiot, but there are actually laws he just broke in the Federal Avation Regulations too. ;)

FAR Part 91.13 - Careless & Reckless Operation of an aircraft, and FAR Part 91.119 - Minimum Safe Altitudes. 91.119 basically says that you're ok flying low out over water or un-populated areas so long as you maintain 500' away from people, boats etc. He would have broken the law even in that situation, but the Warf and the Boardwalk are congested areas, and require an altitude of 1000' above the ground, so he was just under 1000' too low. And then come the F-16s. Oops!

-Inigo

(P.S. Sorry if the FARs weren't that relevant, I'm just trying to remind myself how much effort I'm going to make to keep my pilot's license when I get it... unlike the said gentleman in this post. :P)

Probably not. People buzz along the coastline all the time without getting in serious trouble. Even though it is even more illegal than you think (see below)

> FAR Part 91.13 - Careless & Reckless Operation of an
> aircraft, and FAR Part 91.119 - Minimum Safe Altitudes.
> 91.119 basically says that you're ok flying low out over

> that situation, but the Warf and the Boardwalk are congested
> areas, and require an altitude of 1000' above the ground, so
> he was just under 1000' too low. And then come the F-16s. Oops!

Out over the water itself, you'd think the 500' away from people and boats rule would apply (since the "500' above ground" part of 91.119 doesn't apply "over open water", just the 500' away from people part)... So you'd think it'd be legal to buzz just a few feet over the water up and down the coast, and so as long as you're 500 feet (in any axis) from the wharf or any other people, you'd think you could be just a few feet of sea level there and still be legal. (The wharf would probably not be considered a "congested area", though the boardwalk might, in the summer)

But actually 15 CFR 922 prohibits flying below 1000' over large portions of the Monterey Bay Marine Sanctuary.

In none of these cases would the F-16s come... But if someone wrote down your registration number and called to report you, or worse, the police wrote it down, or even worse, you were captured on video or file, you could end up very unhappy.

The odds that the guy buzzing the wharf and the guy who needed to check in with the FAA after landing at Gnoss being the same guy are slim, too. Someone who likes to fly that low over water could have made it to Gnoss without touching the class B, after all.

Trying to program up a new vertex radio for just low band. (RX only of course)

Anybody have the Rx PL tones for SFPD's low band channels, as well as the
PL for
SF Water District low band channels and E Bay Regional Parks ?

Anybody else in the bay area on low band I should care about ?

I have 128 channels to play with, and I'm trying to put in PL's so I don't
pick up
Jockstrap Arkansas skip.

East Bay Regional Parks 44.760 PL 114.8
*Marin Co Fire 37.100 PL 136.5
*Marin S.O. Main 39.240 PL 82.5

*Marin is still acive on low band until the final switch to MERA,
which will come sometime late this year.

Other than that, there's CHP and not much else on low band in the Bay
Area. If you do want to know if there's a low band skip opening,
program in 33.900, CSQ. This is Hamilton County/Cincinnati OH FD and
always seems to be one of the first eastern US frequency I pick up
when the band opens.

Thanks.

Yes, I'm having trouble filling up 120 channels for the bay area.

I may add some of the Nevada County Fire channels for summer fire season since
I seem to get Placer CHP pretty strong.

If you mean the 47.420 frequency then no, it's CSQ. The Red Cross in the Bay Area almost never uses the low band frequencies in any case. They typically use either their UHF frequencies or Nextel, which seem to be by far the most common way they communicate now.

40033. Novato Accident Update 11:05 PM

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-05-29 06:06:18 UTC
From: Robert Sanford
Topic: 40033 Message: 40033

Setting up the LZ (Landing Zone) for that critical patient transport.
First patient extracated and sounds like more more remaining. One went
via ground ambulance already.

I would tune in 155.280 if your in line of site of Novato so you can
hear the patient transport information after they take off.
That's a great frequency to monitor when they transport someone via
chopper. They will give out all the vital patient information.

Robert

bcn advises that the juvenile succumbed to his injuries, and that the
22 yo driver faces charges of felony drunk driving and vehic
manslaughter.

in monitoring this event last night i was struck by a couple of thing s
that suggested the outcome might not be a happy one:

1) times were asked for repeatedly... suggesting a need for extra
thorough documentation, perhaps, or to help the ic make optimal choices
about next steps?

2) reach personnel accompanied nfd medics to local hospital --novato
general-- instead of flying to snata ros memorial

thoughts, anyone?

was reach riding with the drunken driver or another vic? REACH probably didn't want to put anyone in the air under the influence and take the chance of him start an incident in the air OR they couldn't paralyze someone under the influence for side affect reasons...

Do I under stand this right ? that the helo crew went with the ground crew?
Why? SF's procall's call for a firefighter to go along if need be,
Why take such a big part out of the responce picture.
So now I want to know how long REACH was out of service because of that???

Is Novato Gen. a truma center?

40042. Re: [bayscan] Bad Accident in Novato

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-05-29 17:51:15 UTC
From: nina zhito
Topic: 40031 Message: 40042

as i understand it, reach rode with novato emergency responders and the 14 yo victim to the local community hospital, maybe 5 miles away. the unattended copter wound up blocking traffic for a bit cause of where the lz was.

my wildy speculative and uninformed interpretation just on listening was that the patient was... "in extremis" .... and that it was considered desireable to have him a hospital, any hospital, stat, instead of having him expire in the air... we don't know time of death or how long he was in the hospital til he was pronounced... i thought i heard first pd on scene call for a chopper which seemed weird. unless the tgs have changed it was pd and not fire who made that call...

paralyzed? don't understand.

no, novato is a community hospital not a trauma center. the trauma
center --such as it is, without a heliport that is -- is marin general,
in the greenbrae area.

yes, as reach personnel road with ground crew.

who knows why at the moment, but i am sure their reasoning was sound....

when in flight, flight nurse give a combo of drugs to paralyse the
patient so he or she desn't thrash about in the air.

When a patient has airway management issues (such as a clinched jaw) the paramedics / flight nurses cannot incubate (breathing tube) so they may induce a paralytic state known as RSI (Rapid Sequence Incubation). This in a sense paralysis the pt and relaxes his muscles so his airway can be secured. This can also be used for pts that are still semi conscious but cannot maintain their airway. Ben is also correct. The pt could have been very violent due to hypoxia or blunt trauma to the head; however I think the more likely reason for them to go to Novato Community was because of an unstable/unmanageable airway. Just a hunch from my past and present field experience.

Take a look at this link. Specificly #6 on the list.

From: Craig Rose
Topic: 40031 Message: 40054

You mean intubation, right? I don't think "incubation" has anything to do with tracheal intubation - passing a tube through the nose/mouth, through the larynx, and into the trachea. RSI or Rapid Sequence Induction is a variation of the standard technique for patients under anesthesia. It is performed when immediate definitive airway management through intubation is required, and especially when there is a risk of aspiration. For RSI, a short acting narcotic is administered followed shortly thereafter by a paralytic such as succinylcholine.

At any rate, TMI to be sure, but for those of us that grew up with an ICU/Burn Unit nurse for a mother, it brings back memories ;^)

Bayard,

Isn't it intubate?

But I may be wrong.

So funny I forgot to laugh....MS Words auto corrector has failed me. Can we please not focus on a mistype and rather focus on the valuable and insightful information provided within my post. If you people had taken the time to click on the link prior to responding you would have read the title "(RSI) Rapid sequence INTUBATION)" and it would have been painfully obvious that incubation was a mere mistype. Please keep your derogatory comment," isn't this guy suppose to be a medic" to your self. 1 Post about a single mistype would have been plenty. Ed thanks you for your tact that others lack.

I doubt the helo was left unattended. REACH flies with 2 medics (or 1 medic 1 EMT) and a pilot - the pilot will have no official medical involvement. His job is to secure the helo.

REACH normally does carry a MIC nurse in addition to a medic. I suspect that this unfortunate kid had traumatic airway injuries and the flight nurse rode along with the ambulance to assist in managing the airway. If he could have been stabilized at Novato Community, REACH could have then flown him to Santa Rosa but I think the providers on scene knew that this wasn't going to be the case. The radio traffic I heard from the scene made it pretty clear that there was going to be a fatality from this accident.

Regards, Jim

Menlo Park Department Engines 5 and 2 responding to 1512 Kavanaugh in East Palo Alto for 3 to 4 people shot. Engine 2 now requesting Battalion 1 and a 2nd code 3 ambulance. I can't hear EPA PD from here, so I doubt I'll have any additional on this unless it comes from the FD side.

Engine 2 now reports they are taking one patient, Engine 5 to handle one shot in the foot and another is DOA on scene, Engine 1 also enroute to the scene.

Jeff

40069. East Palo Alto Shooting update @ 5:15 pm

Date: 2005-05-31 00:17:17 UTC
From: sixbyfire
Topic: 40068 Message: 40069

Engine 2 reports they found another shooting victim, there are a total of 4 people who have been shot, one of which is DOA, there are 3 code 3 ambulances enroute. Engines 5 and 1 are on scene and Battalion 1 is now Kavanaugh Command. They are using Control 5 for the tac channel 156.105 mhz which is streamed from firedispatch.com, though I haven't heard anything on there yet. It sounds like all 3 victims are going to be transported to Stanford.

Nothing further on this from my end unless the situation changes drastically.

Jeff

Police using EPA primary (488.3875) and Tac 3 (488.5375)

with mutual aid from the S/O , Menlo Park P.D. and Palo Alto P.D.

One DOA
One shot in back
One shot in foot
unknown on 4th victim

Since I live in EPA and very aware of this stuff , I would actually except additional shootings as soon as today/tonight..... there are rival gangs involved in lot of the shootings in town. 1200 block on Newbridge is on HOT area.

40072. 2 DOA today in Sunnyvale

Yahoo group: bayscan (2005-01 — 2005-05)
Date: 2005-05-31 07:58:11 UTC
From: stfucode3
Topic: 40072 Message: 40072

Surprised no one posted on either of these. I could not since I'm working on MED 7

1st DOA around 5p.m.
LOC: South Mary on Train Tracks
Train VS Ped

2nd DOA around 9:20p.m. (I was 1st unit on scene)
LOC: North 101 @ North Fair Oaks
Several Autos VS Ped on HWY 101
Freeway was shut down for 2-3hours

Due to possible conflict of interest I will not comment further until news articles and information are released by the PIO on these calls.

Regarding the 1st one ....it was NOT the top story at the time ,
the Quadruple Shooting / 187 in East Palo Alto was :-)

As the the 2nd one , I dispatched it for IPN , but was kind of busy and
just didn't think to put it here.

Total of 4 dead then in the area since around 1700

1) the 187 in EPA
2) tracks in Sunnyvale
3) MVA on 101 near Marsh
4) MVA on 101 at Fair Oaks

nasty night

I seem to remember seeing this (not hearing) on CHP CAD - I remember
chp "escort for plane on fway, no plane crash" - or something similar.

I believe it went down on a rural road, and the only way to get it
back to Livermore Air strip was via 580 West (non-commute direction,
as if THAT made a difference.)

Yup- just a rescue class hosted by the NASA Ames D.A.R.T. Team. The course was Structure Collapse Rescue and what you were listening to was the final evaluation drill. It takes place out at bldg 267, the DART traning center on the northern edge of the research center - you can see the site from the stevens creek trail near shoreline. This class draws rescue personnel from all over the nation, takes a whole week, and the group you were listening to was from alabama or georgia I think.
As for the new TG's, the Ames Trunked system has been re-organized a bit. I'll be able to get a list with the new ID names and post them possibly tomorrow.

Cheers!
Matt

Subject: [bayscan] Headsup, possible exercies @ NASA Ames / New TGIDs

I was monitoring the NASA/Ames Trunked system. I have been hearing a
couple of new TGIDs.

02-102
02-104

These appear to have some sort of urban earthquake sar training.
There are folks trying to extricate survivors. Talks of morgues and
aftershocks. And then they break for dinner. They packed it in @
10pm last night.

There are many southern accents, so maybe someone is visiting for the
exercise?

I have also picked up 03-003, which sounds like it isn't related to
the exercies.
